IF YOU want to buy Durocs—gilts or boars—we want to refer you to W. A. Webb & Sons, Poynette, Wis. They have a nice assortment and we guarantee you will get a square deal at their hands. Would suggest that you get your order in at once, for during this month many boars and gilts are going to change hands. See page 26.—Adv.

Collins at River Falls.

JUST now would be a good time to buy one of those Oxford rams being offered for sale by P. N. Collins, River Falls, Wis. He has some big sheep with an excellent fleece and they will give satisfaction. Mr. Collins also has Poland Chinas for sale, either sex, and is in a position to supply your wants. Write him. See page 27.—Adv.

Siebecker at Baraboo.

LET L. R. Siebecker, Baraboo, Wis., tell you about the Durocs that he has for sale. He will quote you prices on his boars and gilts that will appeal to you. He has them to sell, and if you want to buy we are sure you can get together. Mention The Wisconsin Farmer, please. See page 26.—Adv.

H. B. Drake & Sons—Short-horns.

THE above firm located at Beaver Dam, Wis., have been breeding Short-horns for years and have shipped cattle to many states. They are prepared to fill your order for a bull or females at most any time. Get in touch with them when needing Short-horns. See page 25.—Adv.

O. I. C. Hogs.

FROST'S O. I. C. hogs have won numerous prizes at leading shows and the pigs S. D. & B. H. Frost, Kingston, Mo., are offering descend directly from the best of these winners. See page 27 for their advertisement and kindly mention this paper when writing them.—Adv.

Whitmore Bros.' Berkshire Winnings.

AS predicted some time ago Whitmore Bros. made a good showing at the fairs this fall. Their junior herd boar, Handsome Champion 4th (239339) was first and junior champion at Minnesota and first at Wisconsin State Fair and their senior boar Aldaro Climax (212190) sired by Aldaro Premier 3d (132360) and out of Climax Duchess 10th (168188) was first, senior and grand champion at the Minnesota State Fair and the same at the Wisconsin State Fair. This hog was also grand champion at the Wisconsin State Fair two years ago. Whitmore Bros. are now offering yearling and spring boars and spring gilts for sale. Address Whitmore Bros., Lyons, Wis. See advertisement on this page.—Adv.

The North Holsteins.

JOHN NORTH, Kilbourn, Wis., can fill your order if you want Holsteins. He maintains a good-sized herd, and there are several other herds in his neighborhood that he can draw from. He can supply you with bulls or heifers and at a reasonable figure. If in need of something in Holsteins let Mr. North quote you prices. See page 25.—Adv.

Short-horn Sale Canceled.

HERR BROS. & REYNOLDS, Lodi, Wis., have canceled their sale of Short-horn cattle announced for November 1st at Chicago.—Adv.

Boar Week Oct. 8 to 13

Gant's Farm Durocs, Delavan, Wis. The home of the real 1,020-pound grand champion boar,

KING DEFENDER

DURING this week we will sell you a spring boar for $50 that will bring a tear to your eye. We have spring boars sired by Pathfinder (the mighty), Orion Cherry King Jr., the Omaha grand champion, and six other noted boars. Aged and yearling boars by Illustrator and Cherry Chief. Come and make your own price. Nobody to bid against you but ourselves, and we want to sell. Opportunity knocks—nobody else does.

GANT'S FARM **DELAVAN, WIS.**

G. W. OWENS' BIG-TYPE POLAND SALE LAWLER, IOWA, WEDNESDAY, OCT. 17

50 HEAD OF THE REAL KIND

ALL are spring pigs, and boars and gilts are both extra good. They are sired by I Am Baron, my great herd boar, recognized as one of the breed's best, Blue Valley Jr. by Blue Valley Quality by Blue Valley, and a litter of six boars and three gilts that are big and good by the Iowa and South Dakota champion, Big Price. Their dam is by King Expansion, a litter brother to Again Expansion. Belle B. the dam of I Am Baron, has three boars and one gilt by Blue Valley Jr. that are extra and one of the boars is the largest spring boar to be sold this year. See him. He is a wonder. I have the goods and know it and to back my judgment will pay the fare to and from the sale to anyone who is disappointed in the offering. Send bids to auctioneers in my care. G. H. Burge and S. E. Johnson auctioneers. Address for catalog, mentioning this paper

G. W. OWENS **LAWLER, IOWA**

Double treated, and we record them. They will be worth $40.00 on the market by the time you are ready for their service. Farrowed in last of February, March and April, the greatest lot of high-class pigs we have ever raised, long and deep bodied, heavy boned, nicely marked and good backs. They are from the most noted families of the great breed, sired by Giant Jumbo 2d, the 700-lb. year-old son of Giant Jumbo, whose sire was the 1,055-lb. Maid's Halvor 1st; his dam sired by the 1,000-lb. and over Big Bone 2d, his grandam by Mouw's noted Big Jumbo. There is no bigger breeding. Others by Long Expansion, a 900-lb. two year old, and Pawnee Wonder, a 1,000-lb. son of A Wonder.

The dams are sows weighing from 600 to 800 lbs. and over, of the most intense big-type blood lines. Buy your boar now and save from $20 to $50. Boars will be high and scarce this fall.

Send your check right with the order, tell us the kind of a boar you want and we will send him or return your money. Come and see our herd, one of the greatest in America, as well as one of the most up-to-date, pure-bred stock breeding establishments.

W. H. COOPER, HEDRICK, IOWA.

POLAND CHINA SWINE.

LIBERTY SPRINGS POLANDS

Buy direct—for less!

Don't pay two and three prices for your implements when you can buy direct from my factories for just one price and save that difference in cost!

You know Galloway

You have heard of Galloway of Waterloo, the man who saves the farmers of this Country a million dollars every year. I have met and shaken hands with thousands of my farmer friends at fairs, public sales, and in my factories at Waterloo. My great big institution was built upon faith the farmers have in me. I won their confidence because I give them a **square deal.** My motto has always been and always will be **"better goods for less money"** or I don't want your business. Besides I guarantee absolute satisfaction after a field trial or your money is instantly refunded and freight paid both ways.

You owe me one order

Now then, why is it that there are still some who know me—are certain that what I say is so—who have failed to take advantage of my quality goods at lowest prices. Don't let habit and prejudice stand in your way and prevent you from sharing in my million dollar saving. Let me prove to you what I have been telling you in the farm papers for the past nineteen years is so. Let me show on your own farm that the quality of Galloway Implements is just what I say it is. Your neighbor has bought from me. You know he is satisfied. He told you about it. Why don't you take his word. Buy your spreader, engine or tractor from me and enjoy the same advantages he does. You are convinced that my goods are right, that my prices are right, so why hesitate. If you have bought Galloway implements and are satisfied, why don't you buy again.

Why my prices are lower

I get letters from my farmer friends, all of the time, who have bought spreaders, engines, separators or tractors from me, telling me how satisfied they are and what a big amount of money I have saved them on the price. They say they cannot understand how Galloway can do it when the same kind of high grade implements are selling from 25 to 35% more. My prices are lower because I sell direct to you from my factory at the very lowest manufactured price based on a great volume of business. In the face of rising costs everywhere I am keeping prices down.

What buying direct means

Buying direct from the factory means much to you farmers if you only realized it. It is a great big privilege that is not always understood by everyone. Suppose for instance, you had a friend who worked in some Separator Factory and he offered through his influence to sell you a machine off of the floor at the **factory price,** wouldn't you jump at the chance. Well that's just exactly what buying direct from me means. It means that there is no one that comes between you in getting your implement. That's Galloway's million dollar saving. Every Galloway separator, spreader, engine, etc., comes straight from the factory floor to you complete at only a small factory price. That is the reason that Galloway prices are lower for the same grade of high grade goods.

Dividing the melon

You notice on my catalogs from year to year a picture of a watermelon always divided in half. "Dividing the melon" is a phrase used by big corporations when they divide the profits. It means the same to you, because dividing a melon with Galloway means dividing the profits with you farmers, enabling you to buy **direct from the factory.** Nobody comes in for a share of this melon but you, which you get in the shape of big savings when you buy from me. This year the farmers' share will amount to a one million dollar saving.

My masterpiece engine

For 1918 I guarantee the biggest saving on the best engine I ever built. My new models are built of the finest materials by skilled workmen. Every part is alike, standardized and interchangeable. It is positively unsurpassed by any engine on the market today. This I know because I have tested them all. Develops away above regular horse power. Has a big bore, long stroke, heavy weight, ideal type for farm power. Valves in head like the best automobile engine. Burns any kind of fuel and is very economical in fuel cost. Has large, heavy counter-balanced fly wheels. Special Oscillating magneto supplies fat spark. Needs no batteries. Has make and brake ignition. Never misses. Is easily started. Requires no cranking. The entire engine is absolutely fool proof, and is scientifically and accurately constructed.

Separators with every new feature

My new sanitary model is in a class by itself. It is absolutely beyond compare for its remarkable skimming, sturdy construction and lasting service. Because I name a low price, do not compare it with low priced separators. Stand it along side of the ones that sell for 25% to 30% more. This test will give you a clear understanding of the wonders of my new sanitary model and the great big tremendous saving it offers you. You can test it for 90 days on your farm. For 180 milkings you can use it and see for yourself how it skims, how easily it operates, how superior it is from other separators and how its features mean so much to your dairy profits.

New Spreaders

Satisfaction Guaranteed or Money Back. My $25,000 bond backs every sale.

My new No. 8 low down spreader is a master stroke in spreader construction. Here's what you get in this master model for 1918. It's low down; does not break your back to load it. Has extra light draft. Two horses can handle it on any field without killing the team. Has wide spreading V rake and strong beater teeth that tear the toughest manure clumps into tiny particles that makes spreading easy and thorough. Has patented roller feed and patented automatic stop. Uniform clean-out pushboard—indestructible steel tongue. Will spread from four to twenty-four loads per acre. You are missing the best in a Spreader if you buy before you investigate the Galloway and you will lose money besides.

Tractors with Power

If tractors were all standardized, they would follow closely the lines of the Galloway. My new 12-20 model is built for general all around farm work. It is as scientifically and carefully constructed as an automobile. Has twenty-one sets of Hyatt roller and ball bearings which save the engine power for the draw bar and the pulley—where the power is wanted and needed most. Dynamometer test of the Galloway show it takes only 15½% of the engine's power to propel the tractor without implement. Think of that. 85½% of the power developed is used for actual field work. Compare that with other tractors that only give 50 to 60% of the engine's power to field work. Has four cylinder motor built on valve-in-the-head principle—is water cooled. Has patented power saving transmission. Will pull three 14" bottoms eight to nine inches deep in clover or timothy sod. Besides plowing, discs, harrows, runs thresher, fills silo, shreds, can pull 28" grain separator, saws, grades roads, can be used for pumping plant.

Write for my new Book

Send for this great book. It's my only salesman. I guarantee it to be the greatest money saving book you have ever had in your hand. Throw off prejudice and habit—join in and get your share of Galloway's million dollar saving. Times are prosperous I know, but you can just as well save money in prosperous times as in hard times. Money saved is money earned. I urge you to let me send you this book. Read it thoroughly, learn what Galloway can do for you in the way of saving you money on the highest grade of separators, tractors, engines, spreaders, and other farm implements. Read in this book my life story—how I started this business nineteen years ago and built it up surely and strongly, until to-day it's the largest business of its kind in the world—making farm implements and selling direct from the factory. Remember my policy. I take all the risk. I guarantee satisfaction or your money back. I give you immediate service and prompt shipment from the great chain of Galloway factories or immense warehouses at Council Bluffs, St. Paul, Chicago, Kansas City. Send me a postal tonight for this wonderful money saving book. You lose money if you hesitate.

Please mention implement in which interested. This is important.

THE WISCONSIN FARMER

VOL. XLVI. NO. 41. THURSDAY, OCTOBER 11, 1917. WHOLE NO. 1863

Dairy Cattle Congress

SENIOR AND GRAND CHAMPION HOLSTEIN BULL, OWNED BY IOWANA FARMS, IOWA.

JUNIOR CHAMPION BROWN SWISS HEIFER, OWNED BY IRA INMAN, WISCONSIN.

JUNIOR AND GRAND CHAMPION AYRSHIRE BULL, CAVALIER'S LORD STUART, OWNED BY ADAM SEITZ, WISCONSIN.

DAIRYING made a great forward stride last week at the seventh annual Dairy Cattle Congress, Waterloo, Iowa, when a new record of attendance was made for that institution and a new standard of excellence set for the live stock and other exhibits. No dairy show of better quality has been held in this section of the country. This year a keen interest in the dairy industry was evident at every turn. Farmers from nearly every part of eastern Iowa came in their cars to see the show, some of them traveling two or three hundred miles in making the trip. One delegation of about forty farmers, headed by E. J. Trosper, agricultural agent, came all the way from northeastern Missouri by automobile to attend the congress and gain information on the dairy industry. In addition, large numbers came on trains and the local attendance was heavy throughout the whole period of the congress. During the first five days nearly 50,000 persons passed through the entrance gates.

Efficient management has done much to make the Dairy Cattle Congress a success. A stock company, composed of enterprising business men in Waterloo and the surrounding territory, look after the finances and E. S. Estel, of Waterloo, the state dairy expert, has charge of the general management. The systematic arrangement of the cattle judging program and the care in following it out are especially worthy of favorable comment, and the location of the buildings and judging arena is also a point in the show's favor. The cattle barns stand adjoining the arena on one side, so that exhibitors can get their animals to and from the show ring with little loss of time. Opposite these barns and on the other side of the arena is exhibitors' hall where the manufacturers' exhibits and booths of organizations are housed. Beyond this extends the automobile hall and various tent exhibits. Such a compact arrangement makes it very easy for visitors to find their way from one place of interest to another.

Waterloo is especially well fitted for the home of the Dairy Cattle Congress. The surrounding

(Continued on page 6.)

A FINE GROUP OF BLACK AND WHITE CATTLE AT WATERLOO.

Even spread, maximum penetration. Winchester shot pattern brings down the game.

Winchester Model 12 Hammerless Shotgun.

The pattern that brings down the game

A perfect pattern may thoroughly cover the bird, but it's the high velocity of the shot charge that insures a kill. A game-getting gun must throw an *even* pattern with lots of steam behind it.

The Winchester Model 12 Repeating Shotgun is designed and bored to *bring down the game*. Its pattern shows a perfectly distributed shot spread with maximum penetration. That's why it is the choice of sportsmen everywhere.

Quick feeder, sure ejector. Throws empty shells to the side, out of your way.

The gun for every sort of wild fowl shooting

Whether you're snap shooting at upland plover or trying a long shot down in the blind, there is a gauge and a bore of the Winchester Model 12 that will give you the pattern you want. This master shotgun meets every kind of bird shooting requirement.

The Winchester Model 12 is beautiful in design, light in weight, simple and sure in operation. It points like your own arm. It can always be depended on to plant its charge *closely, evenly* and *strongly* at the range its choke adapts it for. It works smoothly in whatever position it is held. For those who prefer a hammer action gun, we have made the Model 97. It is built on similar lines to the Model 12, but with hammer action.

The barrel *is* the gun

Men who know guns realize that the accuracy and durability of a gun lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard of quality of the barrels on the highest and lowest priced Winchester guns. With Winchester the barrel *is* the gun and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel.

The Winchester barrel

The barrel of the Winchester Model 12 has been bored to micrometer measurements for the pattern it is meant to make. The degree of choke exactly offsets the tendency of the shot to spread. Until its pattern proves up to Winchester standard the gun cannot leave the factory. The Nickel Steel construction preserves the original accuracy forever.

The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that, with proper care, will last a lifetime.

What (P W I) means

This mark on the barrel means *Viewed and Proved Winchester*. This stamp stands for Winchester's guarantee of quality, with 50 years of the best gun-making reputation behind it.

Every gun that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times for smooth action and accuracy, and has been fired with excess loads for strength. At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment process.*

It is this care in manufacturing that has produced in the Model 12 and Model 97 guns of unsurpassed game-getting qualities that have won the name of "The Perfect Repeaters" among wild fowl hunters.

Write for details of Winchester shotguns, rifles and ammunition

The Winchester catalog is an encyclopedia on shotguns, rifles and ammunition. Every hunter should have one. It gives detailed specifications of the Model 12 and Model 97 and describes at length the principles on which every one of the world famous Winchester shotguns and rifles is built. Write today. We will mail you a copy free, postpaid.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

GILT-EDGED FARM MORTGAGES.

HERE in the grain belt we realize that a farm mortgage is the soundest investment there is on the market. I am glad to see that this knowledge is finally reaching the financial centers in the east. It has taken them a long time to find out the truth, for the memory of the days of wild-cat and careless farm mortgage flotation has lingered long and unpleasantly in the minds of the men who lost money two or three decades ago. To-day a grain-belt farm mortgage ranks alongside a government bond; there is nothing safer, more certain of returns or more to be recommended to the investor.

This matter was recalled to my attention by an article in the Literary Digest, a high-class publication. The article records a conversation, in which a Wall street broker, who has not been west of the Alleghenies since the Chicago World's Fair, asks a grain-belt banker, "What are these western farm mortgages? One of my customers wants to put some money in them, but I never heard of anybody buying them. Aren't these the same things that went to pot back in the populist days?" The grain-belt banker lost no time in setting his Wall street friend right. It was not difficult to figure it out on paper, briefly but convincingly. Here is what he had to say on the amount of farm-mortgage indebtedness and agricultural credit in general. He tabulated his facts, in order that they might be grasped more readily:

Value of American farms, $40,000,000,000.
Value of annual farm output of food and other raw materials, $10,000,000,000.
Public investment in long-time loans (mortgages) on the $40,000,000,000 worth of farm property, $3,500,000,000.
Seasonal short-time credit granted by banks to farmers on the security of the $10,000,000,000 harvest, $2,000,000,000.
Total agricultural credit, $5,500,000,000.

After these figures had been digested, the grain-belt banker made up a second set showing the owners of the farm mortgages, as follows:

Two hundred and twenty life insurance companies own $700,000,000 farm mortgages.
Eighteen thousand banks (state banks, trust companies and savings banks) own $750,000,000.
Private investors, estates, trustees, colleges and other institutions, both American and foreign, have $2,000,000,000 invested in these loans on farm lands. Of this $2,000,000,000, about $500,000,000 has been sold through the medium of the banks, while the remaining $1,500,000,000 has been arranged either through the agency of farm mortgage banking houses or directly between lender and borrower.

I am glad to know, as the Digest declares, that the Wall street man, accustomed to thinking in hundred-million-dollar units, readily grasped the significance of these statistics, although he was amazed to find that an investment market of such huge proportions had been developed beyond the confines of the eastern financial center. His next inquiry was naturally as to the safety of farm mortgages, and the grain-belt banker cited these facts:

Investment houses that have been in business for half a century, lending money to farmers on the security of land under cultivation, report that they have never lost a dollar of principal or interest for any customer.
The insurance company having the largest investment in farm mortgages ($100,000,000) states that it has never been able to discover a more desirable channel in which to invest its funds.
Universities and other institutions that for many years have been placing all or part of their endowment funds in farm mortgages report that they have suffered no losses, and know of no safer way to obtain their income.
The banks of one of the smaller eastern states, that have invested nearly fifty millions of their depositors' funds in western mortgages, have made but one loss in thousands of transactions extending over many years.
The best test of the soundness of farm mortgages as investments is that hundreds of millions of dollars of them are held by our most conservative institutions—savings banks, trust companies and life insurance companies.

I am glad of the opportunity to reprint these facts, for we should know and appreciate them ourselves, as well as publish them broadcast to the world. The farmer who wishes to place a mortgage on his farm is not a supplicant for financial aid; he is giving the man with money the best opportunity he could ask to invest that money wisely, safely and profitably. There is no longer any reason to be ashamed of the fact that we have a mortgage on our farm, for mortgages spell success and prosperity, when the money they raise is judiciously expended for enlarging our farming operations. Nor is there longer any reason to believe that the banker or the investor is doing us a great favor when he grants us a loan on our farm property. He can find no better possible use for his surplus funds. The coöperation between farmer, banker and investor, which has caused farming to forge ahead so marvelously here in the grain belt in the past, is certain to be still more effective and productive once the facts which the grain-belt banker told the Wall street broker, and which I have reprinted here, become still more widely known.

SENDING FARM BOYS TO ARMY CAMPS.

THE latter part of this month will find several thousand more farm boys leaving home for the national army camps, there to be trained as soldiers. What conditions will they find there, what would they better take with them, how long will they remain there? These and other questions are being asked in thousands of farm homes these days, witness this letter which I have just received from Mrs. Robert Bowden, Elmwood Farm, Ayrshire, Iowa:

Dear Mr. Pierce:—I am coming to you for advice. Our only boy will soon leave for Camp Dodge. Can you please tell us what clothing he should take with him? He has plenty of wool underwear, wool shirts and all other clothing. Some tell us one thing and some another. Can he take a suitcase? Can he return his clothes home? Please tell us just how to fix him out so he will not be cold.

I cannot close my letter without saying that I would like to clasp your hand and say, "God bless you" for the little sermons you have given us about the draft taking our farm boys. How on earth are we going to furnish food for our allies? Here in our neighborhood the farms are stripped of young men. We have a good, productive farm, well improved. Our only boy is all we had to work this farm. His father is past 63, cannot work much on account of rheumatism, while I am 55. We are left to get along as best we can and depend on such help as we can find, and that very poor. Our boy regrets that he ever asked for exemption. I read where General Crowder says "Farm boys will be shown no favors." Bless me, farm boys never asked for any favors; they were told they were needed to produce more foodstuffs. On a farm adjoining ours an only boy is called; his father is obliged to give up the farm; he is past 60. This is the case all over the grain belt; old men and cripples are left to do the work. Either these high officials do not realize what it means to farm without these boys or they must think the war will end before another crop is raised—God grant that it does! I was disappointed in our exemption board. They certainly do not understand how things are going.

When I come to the camp to see my boy I shall come out to see you. I know you are a good man; you seem to know how we mothers feel. May you live long to continue this good work.

There is a solemnity about this letter which calls for the best reply I can make. Mrs. Bowden's words are a benediction; there is a note to them which brings back the sound of my own sainted mother's voice. Would that I might comfort this good mother, and all others in her plight, as they fix up their boys to send them away to the army camps, so that their hearts would quit aching and peace would come to their troubled minds! I fear I am not equal to the task.

In answer to the questions of this good mother, however, and the others who have written me on the same subject, I would say that the boys should be sent to the army camps with sufficient clothing to do them for a few weeks; warm, comfortable clothing which will suffice until the necessary stores can be had from the government. I have seen thousands of these national army soldiers in the last month; the government has been able to equip them with army hats and shirts, but the trousers are not yet forthcoming. If my boy were going I should tell him to wear a good warm suit (not his best, if that is a Sunday, go-to-meeting one) nor his worst (if that is a pair of overalls and jumpers) which may be thrown away, if desired, after the government uniform is had, but which is good enough to make him feel at ease when he goes to town with his fellow soldiers. In brief, wear a comfortable suit and after the uniform is furnished, either throw the old clothes away or return them by express or parcel post to the waiting mother. The officers allow the men to return their clothes after the uniforms are had; no one need worry as to that. Along with comfortable clothing, be sure to equip the boys with necessary toilet articles: tooth brush, tooth powder or paste, brush and comb, and so on. Suit cases may be brought as desired.

I have personally visited two of the great national army camps situated in the grain belt within the last month. I have talked with hundreds of boys from the farm. I intend to publish an article, on this page, within the next two or three weeks, describing conditions exactly as I find them. I hope you will watch for this article; I believe it will be interesting, not so much because of the way I shall write it, but because of the interesting facts I have to set forth. Perhaps some worried mother may find solace in my words; perhaps I may dry the tears of some who mourn. At any rate, will you wait and watch for the article? I can promise it to you some time this month, I feel sure.

TEMPTING THE SOLDIER BOYS.

I AM in receipt of a letter from a subscriber, Elvie McLucas, of Redfield, Iowa, which brings up an interesting subject, one on which my readers may differ very materially, but which we might well discuss together for a time. The subject is the propriety of sending cigarettes and tobacco in its various forms to our soldier boys over in France. Let me print the letter in full, just as it comes to me:

My Dear Mr. Pierce:—Sometimes I wonder whether we mothers ought to burden you with our troubles, but it seems at times we have no other refuge. This wonderful question of food conservation has made me wonder many, many times why so much is being said about the housewife's extravagance. She is told she must economize more and more, while not one word is said to our men and, I am sorry to say, to some people who call themselves women, against the use of tobacco. It cannot be honestly stated that this habit benefits a single individual, and our public school-teachers have been teaching the children in the schools and we have been teaching our own children in our homes for years the evil effects of tobacco on the system. It is hard on the nervous system, as well as ruining the digestive organs. And look at the filth, the disagreeable part of it—spitting and puffing away millions of dollars' worth of the stuff. There are thousands and thousands of acres that might be growing something that would be of some material value as food and they are used for that foul stuff. Not one word do we hear against its use, but instead we are sending shiploads across to our dear boys who need better and more substantial things.

I see the Red Cross is planning to give our boys a Christmas present and is recommending pipes, tobacco, cigars, cigarette paper. Now I wonder what my boy would do with that stuff. He has always been a very clean boy that way and I would just feel terrible to think my life work had been in vain, and I surely would feel so if he came home puffing and spitting his life away. I think it a terrible shame to put temptation in their way under those circumstances. We are sending the cream of our nation and we want to make them as happy as possible, but let us encourage cleanness as well as patriotism. We know sin doth lurk there. It takes many a dollar that we might use for foodstuff.

Arouse mothers to the situation. Please do not think I am not patriotic, for I love the dear old flag and my native land, but I am so anxious for the dear, precious boys that are laying down their lives for us. I hope I have made my side clear and it will bear fruit to His name and glory.

ELVIE McLUCAS.

Many of my readers already know my general views on this subject. I have closed the advertising columns of all of my farm papers to cigarettes; I simply will not allow them to be offered to the youth of our farms through any coöperation on my part. I think we will all agree that from a physiological standpoint, if none other, the cigarette is an evil and a growing menace to our nation. It should be condemned by every clear-thinking, clean-living person. As to whether our condemnation should extend to tobacco in its other forms, I fancy there will be quite a difference of opinion. What is one man's meat is another man's poison; some men have "tobacco hearts," others have not; we cannot lay down a hard-and-fast rule which will be accurate in the case of all tobacco users. If a pipeful of good tobacco would keep one of our soldier boys over in France from getting homesick, if it would make him a better fighter, a braver man, a more courageous crusader for democracy, I would say: Give it to him. If it were a temptation, which he had turned his back upon while at home, but which he might not be able to resist with his comrades looking on, I would say: Keep it from him. It is a trite saying, but true, nevertheless, that circumstances alter cases, so do they alter temptations.

My correspondent must not overlook one important fact: The Red Cross and other kindred charitable organizations are not confining their gifts to cigars and cigarettes; there will be various presents, for every one. There will be good things to eat in the Christmas boxes; candies and jellies, preserves and cookies, and so on and on. There will be sweaters—for a million women are knitting night and day for the soldier boys—and trench comforts of all kinds. The boy who does not want the cigar or cigarette, to whom it is a temptation which he seeks to shun, will find other things in the Christmas box. And, after all, he is not going to

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES.

BY JAMES M. PIERCE

JAMES ATKINSON, EDITOR-IN-CHIEF

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter.

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

THE WISCONSIN FARMER, Madison, Wisconsin

Wisconsin Cabbage and Onion Growers Meet.

A sort of experience meeting covering experiments and scientific investigation in cabbage and onion culture which have been conducted in southeastern Wisconsin for the past several years, was held Saturday afternoon, October 6th, at farms in Racine and Kenosha counties. There were in attendance a large number of local growers who have had charge of the distribution of Wisconsin Hollander disease-resistant cabbage seed and, in addition, a number of field men representing pickling and packing concerns, a company of interested farmers and truck growers, and representatives of the Wisconsin College of Agriculture. In brief, it was found that the new strain of cabbage has withstood inroads of yellows and other cabbage diseases prevalent in the district. The value of the new disease-resistant strain was the more apparent because an examination of check rows of the common varieties grown in the same neighborhood showed that in almost every case there was a heavy loss resulting from disease.

There were about 1,000 acres of Wisconsin Hollander planted in Racine county this year and the 300 pounds of seed needed for this area was distributed through a local committee, including such well-known men as W. J. Hansche, A. J. Piper, S. B. Walker and F. B. Swingle, of Racine; Henry Brush and Will Thompson, of Kenosha, and W. J. Miller, of Summers. A report made to the meeting by A. D. Selby, of the Ohio station, was that the Wisconsin Hollander strain has made good under tests in that state.

Successful test selections of kraut cabbage made by the college of agriculture from the Brunswick and All Seasons varieties were also inspected by the party. Several heads of these resistant strains will be stored this fall and used to produce seed next year. Seed of the improved kraut varieties will not be ready for general distribution before the spring of 1919.

In answer to questions relative to checking the cabbage worm, which has been unusually severe this season, H. F. Wilson, insect specialist at the college of agriculture, stated that in view of the high prices and great scarcity of Paris green and arsenate of lead it might be advisable to substitute calcium arsenate for these next year.

This insecticide is to be used for chewing insects on vegetables only. It has been found injurious to the foliage of fruits, some declare, and for this reason cannot be recommended as a general substitute. Experiments with calcium arsenate at the college of agriculture this summer have been successful in checking the cabbage worm.

Growing cabbage on marsh soils was discussed by W. W. Weir, field agent of the state soils laboratory, who has been conducting some coöperative tests of this sort in the vicinity of Kansasville.

Interesting work with formaldehyde solutions applied at time of seeding in checking onion smut ravages were noted by the visitors. A fourteen-acre field near Racine was inspected. The area in this field which did not receive treatment yielded three bushels, while an equal area in which the seed was sown in with formaldehyde solution produced nearly thirteen bushels of good onions.

The formalin was obtained at wholesale prices and authorities say its use represents all the difference between profit and loss in the crop. Onion smut is practically new in this district, but seems to be spreading. The use of formalin advocated as a result of trials by the college of agriculture, seems to offer a ready means of stopping it in time to save the industry from possible loss.

Protection Against Gas in Silo.

Three men employed upon Wisconsin farms have met death within the past few days as a result of carbonic acid gas generated in silos filled with freshly cut immature corn. Officials of the Wisconsin Industry Commission say that this is the first record that they have ever had of deaths on farms caused by gas in silos. The cases were immediately referred to chemists at the college of agriculture and these chemists have made the following report:

In silo filling there is always a possible danger from carbon dioxid gas. This gas is always generated in partly filled silos during an intermission in the work, and may accumulate in sufficient quantity to prove fatal to life.

The possibility of danger from this gas may be ascertained by lowering a lighted candle into the pit before anyone enters it to tramp down the silage. If the light continues to burn in all parts of the silo human beings can live in the same atmosphere, but if the candle is extinguished it means death to one entering the pit.

A door opened low down in the silo will allow the gas to pour out. Directing the blower from the silage cutter into all bottom parts of the silo for a time, and pouring in a lot of newly cut silage will soon stir up the air. This fresh circulation of air will tend to drive out the poison quite rapidly. Then another candle may be lowered into the silo as a final precaution before going in to resume work.

The accidents this year have no doubt come as a result of efforts to hurry silo filling to accommodate the corn partially damaged by frosts. The precautions suggested by the chemists at the experiment station are so simple that it would seem to be unnecessary to have any further trouble along this line.

Wisconsin Cows Require Grain.

The following letter from Ernest Hinrichs, official tester of the Baraboo Cow-Testing Association, Sauk county, Wisconsin, is illuminating in regard to feeding grain to cows in the late summer and early fall, where pastures are short:

During the month of September the Baraboo Cow-Testing Association had only twelve out of 262 cows which produced more than a pound of butter per day tested. The advisability of feeding high-priced grain to cows has been the most-discussed question. The pastures are entirely gone. Thus a cow which freshens now has nothing to eat except what is fed to her. Everyone has seen the disadvantage of having cows freshen in midsummer. The following was noted: When a cow freshened and was not fed grain she dropped anywhere from ten to eighteen pounds per day. When a cow freshened and was fed ten pounds of grain per day, she held her flow and in many cases increased it. Now 4 per cent milk is worth 52.44 per cwt. and 1,500 pounds of milk would be worth $36. Ten pounds of grain at 3 cents would be worth 30 cents. Thus it is readily seen that a cow may pay for her high-priced feed and also hold up in milk until fall when it is cooler and there is more feed. It was also noted that when a cow freshened and was not fed grain for two or three weeks and then was fed grain, she did not increase in milk in proportion to feed as she would have done directly after calving. A stripper cow may not pay for her feed directly from the sale of her product, but she must not be allowed to run too low in flesh because this will decrease her ability to produce in the following lactation period.

Herd averages of fat have been lower where grain was not fed even with the milk flow almost cut in two (compared with the previous month) than where grain was fed. Here the fat of the herd average increased over the previous month along with the lower amount of milk. This shows that the condition of the animal has an influence upon the test. Cows of late have had all they could do to maintain their body, let alone giving a twelve to fourteen-quart pail full of milk twice a day, or even more.

Mr. Hinrichs' letter not only gives us some light on the cost of producing milk this season and the necessity for higher prices for milk and milk products if the farmer is to make a fair profit, but we believe the tester might have gone further and urged more summer silage. Those dairymen who have had the foresight to build an extra silo and save its contents sealed, for the summer following the fall in which the silage is put up, will obviate a great deal of the high cost necessary if grain is to be fed to keep up the milk flow. It is apparent that the general consuming public does not understand all the difficulties and particularly all the expense which is incident to late summer milk production, especially in a season when pastures late in the summer are below the average owing to dry weather. The encouraging feature of Mr. Hinrichs' letter is that grain can be fed at a profit, even though the prices are high, and if silage had been provided for these cows which freshened in the late summer or fall, the expense could have been cut down a good deal. The extra silo, it would seem, will go a long ways toward protecting the farmer-dairyman against high feed costs. In case the late summer and early fall develops wonderful pastures, as it does in many years in the Badger state, the silage is not lost, but can be kept to feed with grains after the pastures have been eaten off or cut down by cold weather. Silage can most certainly be provided at less cost than grains, and anything which will cut down the amount of grain needed will certainly add to the dairyman's profits. But in any case it is best to keep up the milk flow even if grains must be fed. The higher the price of grain the more the farmer must have for his milk.

Wisconsin's Great Showing on Grains.

For the tenth successive time in competition with leading grain growers of the United States and Canada Wisconsin has won the world's championship on barley. The latest competition was at the Soils Product Exposition held at Peoria, Illinois. The winning sample of barley was exhibited by Wm. Bell, Arlington, Wisconsin. This barley was in competition with barley grown in the best irrigated lands of the country and by men who have for several years been trying to wrest the championship from the Badger state. Wisconsin has never failed to win championship on barley wherever it has exhibited. This is certainly sufficient grounds for claiming the world's championship on this grain. C. P. Norgord, commissioner of agriculture, writing concerning the Wisconsin exhibit at Peoria, gives The Wisconsin Farmer information as follows:

Wisconsin also won first on spring wheat and winter wheat in competition with the great wheat states of the West. This is a reminder that Wisconsin was once one of the leading wheat states, and indicates what it can do when it again places emphasis on this crop. The samples submitted were presented by H. E. Krueger, of Beaver Dam.

The fact that Wisconsin is one of the two greatest potato states in the Union, and probably first in quality and standard varieties, was recognized by five first prizes and three second prizes on six of the recognized leading varieties of potatoes in this world's competition. Samples were submitted by F. S. Campbell, of Three Lakes, and H. L. Brooks, of Tomahawk.

Wisconsin also won first on clover seed, field peas, blue joint, second on timothy, sweet clover, orchard grass and durum wheat.

Wisconsin also won the $75 prize for the best display from an individual farm, through the display from the farm of H. E. Krueger, of Beaver Dam.

The Wisconsin exhibit was in charge of B. G. Packer, director of immigration, Wisconsin Department of Agriculture, assisted by H. E. Krueger.

In addition to these products of the soil, a splendid display was presented of opportunities and accomplishments of Wisconsin along lines of general live stock and dairying.

Special emphasis was placed upon the Wisconsin sheep industry, and particularly the great opportunities of sheep in Upper Wisconsin, especially for the great sheep ranchers now being crowded out of the West by settlement. This exhibit formed an excellent opportunity for favorable comparison between the well-watered regions of Wisconsin and the central states and western plains.

Wisconsin has made good on its pedigreed grains. In the quality and agricultural value of its whole exhibit at Peoria, it excelled. It stands first in dairying and well in other agricultural industries, because it has abandoned the many useless varieties of soil products and live stock. It has selected a few of the best and best adapted, and through its experiment stations and its breeders, it has greatly improved this limited number of varieties and classes.

These facts bring again forcibly to our attention the importance of the seed business in Wisconsin. While a few farmers have recognized their opportunities along this line the great bulk of grain growers do not yet appreciate the profits which they might make if they would raise and sell more seed. The Wisconsin Farmer strongly recommends to its readers a careful investigation of this phase of farm work.

The White Grub Situation in Wisconsin.

The May beetles or June bugs, as they are quite commonly called, were abundant in southern Wisconsin the past spring and Mr. J. J. Davis, a special representative of the federal department of agriculture, has recently conducted an exhaustive survey in Rock county to determine the prevalence of the white grub. In an open letter to readers Mr. Davis says the following:

The May beetles were abundant the past spring and as a result the white grubs, so destructive to crops in 1915, may again be expected next year. Possibly not in as great abundance as in 1915, because the past cold, late spring retarded the beetles' activities, but nevertheless sufficiently abundant to warrant emphasizing the probability of injury to corn, especially when planted on timothy ground. The beetles prefer to lay their eggs in ground covered with vegetation, hence timothy ground may be expected to contain grubs which will be destructive next year. Small grain stubble ground, especially wheat stubble, which bore a good growth the latter half of May this year, may contain grubs. Corn ground kept cultivated during the flight of May beetles last spring is not likely to contain small grubs since the beetles avoid such ground for laying eggs. Ground intended for corn next year, especially if it was in timothy, small grain or blue grass the past spring, should be examined to determine whether or not the grubs are present, and this can be done by plowing a few furrows through the field and carefully watching for the small grubs or by digging a few feet of ground in a half dozen places in the field. These examinations should be made within the next few days if possible, for the grubs will soon be going deeper and below the plow line, and care should be taken to examine closely, for the grubs are now quite small and easily overlooked; and further, the soil examined should be thoroughly broken up as the small grubs are frequently in cells in the clods of earth.

Ground containing small grubs should not be planted to corn or potatoes next year for these crops are most susceptible to grub injury. Crops which cover the ground, especially such as small grains, are least likely to be injured by grubs and should be planted on grub-infected ground in preference to corn.

Where it is possible pasture hogs in fields infected with grubs before the grubs go deep, and especially when the field is being plowed. If the infested field is near the buildings, chickens will destroy large numbers of the grubs if permitted the run of the field.

When corn is planted on corn ground care must be taken to eliminate this possibility by the proper cultivation in spring.

Our readers will do well to give careful attention to the suggestions contained in Mr. Davis' report. Our county agents are recommending a careful inspection of soil and careful plowing as main factors in the fight against these pests.

May Fix Hog Prices.

As a representative of Herbert Hoover, federal food administrator, Gifford Pinchot, of Washington, D. C., held a conference at Waterloo, Iowa, last week with representatives from many corn-belt states with a view of ascertaining whether in their opinion, in order to insure a large increase in pork production, it would be advisable to fix a price on hogs. He presented the same question before several thousand farmers and breeders at the American Royal at Kansas City last Thursday. He stated that if in the opinion of the producers it would be desirable to fix a price on pork, he would recommend that the price be fixed in terms of corn, suggesting that not less than fourteen bushels would be a fair quantity for the production of 100 pounds of live weight of hogs.

It was stated that the farmers gathered at Waterloo passed resolutions favoring the proposed plan, and when an informal expression on the same subject was taken at Kansas City, only one dissenting voice was heard.

Mr. Pinchot explained that an increased acreage of wheat is already

FAMILY CIRCLE TALKS BY THE PUBLISHER

win very great battles, no matter how many of the enemy he puts to rout, if he cannot conquer his own evil tendencies and overcome the temptations which are bound to beset him. If he is the right sort of fighter he will silence the voice of the enemy that tempts, as well as the voice of the enemy that taunts. Is this what you think on the subject? Write me, so that we may counsel together while there is yet time.

DOING HIS BIT FOR UNCLE SAM.

I TOLD the story last week of a young farmer whom I thought should have been exempted from army service, because of an impending mortgage on his farm and the further fact that when he was sent away he left 150 tons of uncut hay, fifteen acres of undug potatoes and thirty acres of uncut grain. I want to tell another story this week, an altogether different one; that of a young farmer who might have been exempted, but who declined to take advantage of any loophole and is now heroically doing his bit for Uncle Sam.

Something like a year ago my attention was called to the fact that there was a young farmer, living in northern Iowa, who was making quite a success as a wireless telegraph operator, keeping in touch, in his farm home, with the entire outside world, by means of a wireless outfit which he had devised and erected himself. Nor was he a bit selfish, for he had erected a large bulletin board, by the side of the road, and on this board, far out in the country, he posted the daily weather forecasts and the important news happenings of the world, just as they are posted on the bulletin boards of the daily newspapers in the large cities. People driving along the road were surprised to find themselves in touch with Europe, America and all the world, thanks to the ingenuity and the generosity of this young farm boy, who had studied wireless telegraphy through textbooks, at home, until he had mastered the subject.

I had an article written about this young farmer and his work and it attracted much attention when printed in my papers. He wrote a letter of thanks for the things we had said about him and I considered the incident closed. But last week the mail brought another letter from him. He has quit his peaceful Iowa farm, has closed up his amateur wireless station for the war and is serving Uncle Sam as a naval reserve. Let me print a portion of his recent letter, written from the naval training station at Manistique, Michigan:

Dear Mr. Pierce:—I have not had the pleasure of writing to you for some time and the last time I did write I never thought that when I addressed you again I would be in Uncle Sam's Naval Reserves on active duty, but here I am and enjoying myself. I like the work and it is very instructive. You know I always was eager to learn. People cannot say that I was a slacker, as you know I have a farm in dear old Iowa, 150 swarms of bees and a wife and two children. I would doubtless have been exempted, but I owe Uncle Sam a good deal and I'm trying to pay him back a bit. My wife is with me now, as are also the two children, and if nothing happens to the contrary they will be here until the end of the year. After that, who knows? My father is running my farm and managing the bee yard.

I happen to know that the youngest child of this farmer is less than a year old; there is every reason to believe that he could have been exempted, had he been drafted. But he owed a debt to Uncle Sam and he set about to pay it, without ever a thought of whether he could avoid payment or not. He is a magnificent example of the heroism and the unselfish patriotism dominant throughout the rural sections of the grain belt today. I honor this young man, Archie Banks by name, and earnestly, prayerfully hope that while he is paying his debt to Uncle Sam the good God will shield him from all harm and will send him back, after the war, to a united family, around an unharmed hearth, to enjoy long life and great happiness. That he asks to have this paper sent to him while he does his bit on board Uncle Sam's warships is a compliment which I appreciate highly. He proposes to keep in touch with the farm life which he has quit and I shall endeavor to aid him all that I can. Many and many a boy is going out from the farms of the grain belt these days, to the national guard camps, the national army cantonments, the naval training stations, even to French battlefields. But when the war is over—hasten the day!—they will return, for grim-visaged war will have shown them, as nothing else could, how dear are the fields and the furrows of home—home, sweet home.

James M. Pierce

assured for next year and that he had confidence that the cattlemen would produce every pound of beef they possibly can. There is a tremendous need for more pork and more fat, especially the latter, and hogs have decreased 10 per cent since last year and at the present rate of marketing another 10 per cent reduction in the number will occur by January 1, 1918. Furthermore if our allies are to continue to fight, and we are to feed our soldiers across the water, we must not only make up for the reduction in the number of hogs in this country, but we must furnish Europe with 15 per cent more hog products than we have done during the past year. To do this it is absolutely essential that a very great increase in pork production be brought about, and in as short a time as possible.

According to the statement of Mr. Pinchot of fixing hog prices on the basis of fourteen bushels of corn per 100 pounds of live weight of hogs, when corn is worth $1.25 a bushel, the price of hogs would be fixed at $17.50 per 100 pounds. There is no question but this would be a fair price for the farmer. On this basis he could sell his corn at market prices to his hogs, get paid for his labor in producing the pork, and secure a fair profit besides. There is also no question but this plan would be the best for the government, because it would insure increased production.

The Horse Situation.

Some interesting facts have recently been presented by Mr. Wayne Dinsmore, secretary of the Percheron Society of America, on the work-horse situation in the United States as well as in Europe. Mr. Dinsmore calls attention to Food Commissioner Hoover's statement that there has been an actual increase in the number of horses in Germany and in Great Britain since the war began. In the former case it is due to the fact that many horses have been taken from Belgium, northern France and Russia, while in the case of Great Britain the increase is due directly to importation. There has been a decrease in France of 914,000 head between 1913 and 1916.

Turning to the United States, Secretary Dinsmore reports 21,126,000 horses on hand January 1, 1917. In the twenty-eight months ending January 1, 1917, 805,422 horses were exported. In spite of this large export trade there were almost as many horses in the United States the first of January, 1917, as there were on the same date in 1915, due to breeding operations. Referring to horse values and their relation to type, Secretary Dinsmore says:

The supply of heavy horses is limited. The best informed men estimate that of our twenty-one million head, less than a million are real draft horses, weighing over 1,600 pounds; and the demand for these efficient workers is such that they are holding their own in cities and increasing in popularity on farms. There is every reason to believe that the demand for drafters will continue to exceed the supply for at least twenty years yet.

With a view to obtaining the most accurate data possible on horse production, questions were recently sent by the Percheron Society to representative breeders throughout all parts of the United States. Replies were received from 277 prior to the issuance of this letter, and we take this opportunity to thank those who coöperated with us in this inquiry.

Reports from these men on conditions in their own localities show that there has been a marked reduction in the number of mares bred in 1917. While some localities have bred nearly all available mares, this is not generally true, and it appears that not more than 40 per cent of the mares old enough to breed have been bred this season. The number of stallions in service is considerably less than in 1916. This is further confirmed by reports from twelve stallion boards, which reveal a decrease of 625 pure bred draft stallions, and a total decrease of 3,209 stallions all told, which is a tremendous reduction for one year.

Sixty-eight per cent of the men report very few surplus horses good enough for sale for war or other purposes, on hand in their localities. Horses ranging from 1,000 to 1,200 pounds are reported to be selling from $90 to $125 average; horses from 1,200 to 1,500 pounds at from $140 to $175 average, and horses over 1,500 pounds at from $200 to $250 average.

Eighty-nine per cent of the correspondents report no horses that will mature at 1,700 pounds or over, or that there are very few; only eleven per cent report over twelve such horses in their communities. This bears out the repeated declarations of market men and horse buyers, who insist that there are very few real draft horses in any section. This, taken in conjunction with the price—$250 to $300 on the heavier horses—is ample evidence of our urgent need of more big horses. There is no incentive to produce small horses; every reason to produce more real drafters.

Importations have practically ceased. Only 64 Percherons have been imported in 1917. One leading importer has publicly stated that the American bred horses he has bought in the last three years have developed far beyond his expectations. He further says that he can buy better American bred horses here now than the horses he formerly obtained in France. His purchases confirm his statements. Other importers are gradually coming to the same position. It is, however, necessary for dealers to purchase horses at younger ages, and to provide separate pastures—an acre or more—to prevent the young stallions from injuring each other sufficiently to impair sales.

Consideration of all the facts we have painstakingly gathered leads to but one conclusion. There is a shortage of draft horses, which is not likely to be fully supplied for at least twenty years. Draft stallions are scarcer than they were and will be in demand to make more draft horses, out of mares that are 1,400 pounds or over. Horses weighing over 1,500 pounds, if sound and right, are bringing approximately $100 per head more than those under 1,200 pounds, and are averaging $225 or better. Prices are steady or stronger in nearly all instances. Young stock especially should be well cared for. Grain can be saved in some degree by giving all the oat straw, corn fodder and alfalfa colts will eat, but even with this allowance foals and yearlings should have daily at least three-fourths of a pound of grain per each hundred pounds live weight.

The time to keep up horse production is when the average man wants to quit. It pays in the long run.

While this is not the breeding season, it is quite in order to emphasize some of the points brought out by Mr. Dinsmore. The day of the light horse has passed forever and no man can afford to spend his time and waste his feed on a horse that will only bring a hundred dollars as a five year old. The same amount of care and practically the same amount of feed will produce a horse worth anywhere from $200 to $300. In spite of the coming of the tractor and the motor truck it appears now that there is likely to remain an important place for the drafter in our agricultural and industrial system and, this being the case, men with good, sound 1,400 or 1,500-pound mares are in a position to do their farm work economically and at the same time raise drafters at a profit.

Wisconsin Dairymen's Meeting.

The forty-sixth annual meeting of the Wisconsin Dairymen's Association will be held at Janesville, Wis., November 20th, 21st and 22d. The Wisconsin Farmer has just received this advice from Paul C. Burchard, Fort Atkinson, Wis., secretary of the association. The meeting will be held a little earlier than usual this year and in a locality which is convenient to our best dairy interests. There should be a very large attendance at Janesville, and The Wisconsin Farmer hopes to see this the most successful convention ever held in the state. The Wisconsin Dairymen's Association has given other sections of the state opportunity to attend its meetings in the last few years, and this year the session is being brought down close to the southern line for the benefit of the southern counties. Our readers should bear the dates in mind and plan to take advantage of the feast of good educational and practical dairy matter which will be offered on the program at Janesville. Let's smash all attendance records of this association this year.

New Clover Requires Good Top for Protection.

There has been some disappointment over the condition of the clover crop seeded last spring. For a time there was a splendid promise of a satisfactory stand and up to the middle of July the prospect was most encouraging. Two weeks later there was a different story to tell, because then the dry weather began to pinch and this, in combination with grasshoppers, meant the complete loss of many fields. In most cases this stubble land has been plowed and put in wheat, but nevertheless the loss of the clover means that the rotation has been disturbed, necessitating the carrying out of a severe cropping plan.

Those who were fortunate enough to save their meadows should not be unmindful of the fact that severe pasturing is almost as injurious as the siege of weather in July and August. There is always a temptation to turn the cattle into the stubble land that has been seeded down and, while we are not absolutely opposed to a certain amount of pasturing, we have observed too many instances of the crop being absolutely destroyed by pasturing to be enthusiastic about grazing new clover.

A good development of top means a sturdy root system and just as soon as the leaves and stems are nipped off in grazing there and then is the vigor of the root system impeded so that it is not in condition to face the winter and endure hardship. Where a new meadow is fenced hog tight one may usually effect a considerable saving of grain by turning the hogs in during the fall months. If the hogs are fed a grain ration daily they will not be hard on the clover and yet they may consume enough of this rich legume forage to save considerable grain, while, in addition, the clover will contribute to bounding good health and thrift. If the rooting habit develops it will have to be stopped by ringing the hogs, because a bunch of hogs can do an enormous amount of damage to a clover field in a very few days after they acquire the rooting vice. Cattle graze much closer to the ground than hogs and for that reason the latter are much to be preferred in the clover fields, and a few weeks of grazing may still leave plenty of clover top to catch the snow and to protect the root system.

Dairy Cattle Congress.

(Continued from page 1.)

territory comprises a rich agricultural section in which dairying stands out as a big feature. Prominent dairy herds of the country are in this territory, including the Guernsey herd of W. W. Marsh, the Holstein herd of the Messer Farms Co., and the Ayrshire herd of Wm. Galloway. The manufacture of dairy equipment in Waterloo also adds much to the local interest in dairying. Then combined with these advantages is the fact that Waterloo has a population of boosters. The whole town gets behind its enterprises instead of leaving it for a few loyal persons. This was demonstrated in the big home-coming parade held on the second day of the congress. More than 30,000 people lined the streets to see the parade which was composed chiefly of floats of manufacturers, merchants, schools and social organizations. Each float showed that considerable time and effort had been spent in its preparation.

The big feature of the congress was the dairy cattle show. Representative herds of the Middle West came into keen competition, and, although fewer cattle were on the grounds than at the 1916 show, still judges and dairymen agreed without hesitation that this year's show was better because a superior lot of animals were displayed. It was a quality show throughout and the winners of this show that go to the National Dairy Show at Columbus, Ohio, next week, will undoubtedly make a name for themselves there.

The next feature in point of interest, if we may judge by the number of persons gathered about them, were the exhibits of farm and dairy equipment. All local concerns at Waterloo were represented in full force and in addition many national manufacturers had elaborate exhibits on the grounds. Milking machines, cream separators and barn equipment claimed special attention from the dairy farmers. Eight milking machine companies had their product out for inspection, with attachments complete and power turned on, so that the operation of the apparatus could be closely observed. Cream separator demonstrators in charge of their exhibits were kept busy throughout the day explaining with the aid of assembled machines and loose parts the way in which cream is separated from skim milk by mechanical power. In the barn equipment line, many new labor-saving conveniences were on display—litter carriers, feed troughs, calf and bull pens, automatic steel cow stanchions and individual self-filling watering troughs. Every inch of display space in exhibitor's hall was sold out and more was called for than could be furnished.

Among the other prominent lines displayed were gas engines, farm lighting plants, feed mixers, corn shellers, feed grinders, tractors and the common farm implements. In the automobile hall seventeen exhibitors had space. There were cars for every kind of service and the care with which the exhibits were arranged made this show a beautiful one indeed.

The educational side of the congress was well handled in the pure food, cow-testing and hog-cholera exhibits. The pure food work was conducted by the Iowa Food and Dairy Commission. Their booth in exhibitor's hall was lined with charts explaining the need of sanitation in handling foods and showing the nutrient value in various foods, such as milk, butter, cheese, bread, meat and vegetables. Samples of milk were on display taken from nine dairies in each of twelve cities in Iowa. This milk was scored on the basis of odor, flavor, style of package, bacteria count, sediment, fat and solids not fat. Cedar Rapids had the best lot of milk with a score of 89.54 per cent perfect; next came Des Moines with 78.60; Marshalltown, 72.92; Waterloo, 71.51, and Mason City, 71.43.

The cow-testing exhibit showed the advantage of testing cows and discarding the poor ones. Ten cows were in the exhibit, each having a different capacity for milk production. The most profitable cow was a pure-bred Jersey with a record of 12,429 pounds of milk or 742 pounds butter fat a year. Her product was valued at $328.75 and her feed cost was $142.91, thus making a difference of $185.84 for her owner. The most unprofitable cow was a pure-bred Holstein which produced 3,359 pounds of milk or 140.3 pounds of butter fat a year, worth $63.31. Since her feed cost was $65.34 there was a difference of $2.03 which it cost her owner to keep her in the herd. This, of course, does not show that one breed is better than another, since there were high and low-producing cows of several breeds in the exhibit, but it shows that even the pure-bred cows must be tested and that cows which cannot keep up a reasonable production must be discarded in order to make the herd pay a good profit.

The hog cholera exhibit showed specimens of normal and diseased organs of a hog affected with hog cholera. Sections of the heart, skin, lymph nodes and intestines were placed under glass so that the diseased tissue could be readily studied side by side with healthy tissue. On the charts which accompanied the exhibit were instructions on handling the disease. The outstanding measures mentioned for its control were vaccination, quarantine and sanitation on the farm and coöperation and organization in the community.

Patriotism ran high at the cattle congress, as evidenced by the liberal donations and generous bidding at the Red Cross auction sale which extended through nearly a day and a half of the show week and brought in more than $2,000 to the organization. Among the donations were a tractor, gasoline engine, town lot, two loads of hay, more than 100 head of poultry, live stock of different kinds, vegetables and canned fruit. A registered calf from the Waterloo Jersey Farm sold for $500, which was the highest price obtained at the sale. One calf was sold five times, the purchasers in the first four instances donating the calf back to the Red Cross. In every case the selling price of the calf was $82.50. During the sale, W. W. Marsh, M. L. Bowman, Rev. J. R. Macartney and Rev. F. W. Court, all prominent men of Waterloo, made stirring speeches explaining the work of the Red Cross and urging the support of the people to this cause.

Among other works of patriotism were those of food production by the boys' calf club and the Waterloo Vacant Lot Canning Club. The calf club was organized by the Leavitt & Johnson Bank, of Waterloo, in order to stimulate interest in the raising of dairy cattle among the boys, and a contest was held to determine who could raise the best calf in a stated period. This contest ended during the cattle congress. Each boy received a grade calf which he was to feed and care for. One hundred and nineteen boys in the contest had their calves on exhibition during the show week and prizes were awarded to the winners on the last day. The vacant lot canning club had a complete exhibit of garden truck and canned fruit at the show, which had been raised during the summer at the response of the president's call for the patriotic conservation and production of food. Many of the products were of unusual size and quality and demonstrated what can be done in gardening on a small scale if a little thought and attention are given to it.

THE CATTLE SHOW.

Holsteins.—The Holstein show was pronounced by far the best that has been seen on the circuit this year and it is not too much to say that it was one of the strongest shows ever seen at Waterloo. Every class was uniformly strong in quality, scale and type. Eleven exhibitors entered a total of 89 animals. Iowana Farms were the heaviest winners of the show, winning all championships and grand championships. The Messer Farms ran them a close race in every class with the other prizes pretty well divided among the remaining exhibitors. In the bull classes the outstanding individual was the Iowana bull, Oak De Kol Ollie Homestead. He won both senior and grand championship honors in close competition with the Minnesota bull owned by Marlow & McCargar. The Iowana bull had it on the Minnesota sire in masculinity and scale. In the two-year class of bulls Iowana Farms again won the honors after a hard tussle. The first three animals in this class were all bred by Oak De Kol Ollie Homestead and a more uniform lot would be hard to find. The calf classes were equally strong, Messer Farms winning on the bull calf six months and under 12 and Iowana Farms in the under six months class. The aged cows showed nothing spectacular, although all animals were large types individuals with plenty of quality. Iowana Farms won first on Fryslan Waldorf. This cow has a record of 898 pounds of butter fat for a yearly record. She also won the Holstein-Friesian Breeders' Assn. honor for cows having official record begun at two years and under five, and was made senior and grand champion of the show. In the four year olds Jewel Walker Gerben of Cedarside, owned by Messer Farms, was first. In the three year olds Bracelet Clothilde Korndyke, owned by Larsen, of Dike, Iowa, had it over the others in quality and some in scale. The two-year-old class was sensational, showing some of the nicest heifers seen at the Waterloo show. In openness of frame, scale, quality and development these heifers were outstanding. Messer Farms won first and second in this. In the senior yearling and junior yearling classes strong, straight, typey animals predominated. The senior and junior calf classes also brought out a uniform lot of individuals with exceptional scale and quality, the promising mammary development of the winners being especially remarkable. In the groups the feature of the show was the get of sire class won by Iowana Farms on the get of the champion bull, Oak De Kol Ollie Homestead. Prof. H. H. Kildee, of Minnesota Agricultural College, judged the show with the exception of the two-year-old bull class, which was judged by Will Forbes, of Waterloo, as Mr. Kildee was instrumental in purchasing one of the Oak De Kol bulls for Iowa State College and which was shown in that class.

Exhibitors—Ira E. Brown, Laporte City, Iowa; U. S. Culver, Stillwater, Minn.; Geo. Hathaway, Independence, Iowa; H. A. Houck, Jessup, Iowa; Iowa State College, Ames, Iowa; Iowana Farms, Davenport, Iowa; H. O. Larsen, Dike, Iowa; J. C. Marlow & Geo. McCargar, Mankato, Minn.; Messer Farms Co., Waterloo, Iowa; Maxwell Farms, Waterloo, Iowa; Edwin Wilcox, Wyoming, Iowa. Judge, H. H. Kildee, St. Paul, Minn.

Aged bull (4 shown), 1st Iowana Farms on Oak De Kol Ollie Homestead, 2d Marlow & McCargar on Sir Pietertje Ormsby Mercedes 14th, 3d Culver on Piebe Laura Ollie Homestead King, 4th Larsen on Leda Fobes Korndyke Prince; three year old bull (1 shown), Messer Farms on King Segis Iowana Ormsby; two year old (7 shown), 1st, 3d and 4th Iowana Farms on Iowana Mercedes Homestead, Iowana Fryslan De Kol and Iowana James Fayne, 2d Iowa State College on Iowana Homestead Watson, 5th Messer Farms on King Segis Pontiac combination, 6th Wilcox on La Polka Mercedes Pietertje Lad, yearling (4 shown), 1st and 4th Iowana Farms on Iowana Burke Fayne and Iowana Cornucopia Fayne; 2d Messer Farms on Korndyke Pontiac Ormsby, 3d Houck on Sir Fayne Nutula Polkadot, senior calf (10 shown) 1st Messer Farms on Segis Lad Pontiac Korndyke, 2d Hathaway on Star Segis Pontiac, 3d Maxwell Farms on K. S. P. De Kol Triania, 4th and 5th Larsen on Sir Korndyke Clothilde Fornim and King Segis Pontiac Clothilde De Kol; junior calf (8 shown), 1st Iowana Farms on Iowana Ocean Hawtipe, 2d Messer Farms on Prince Korndyke Segis Ormsby, 3d and 5th Culver on Far Oaks Sir Violet Ormsby and Far Oaks Sir Ormsby Champion, 4th Maxwell Farms on unnamed, 6th Brown on King Segis Stuyvesant Grahamholm.

Aged cow (6 shown), 1st and 6th Iowana Farms on Fryslan Waldorf and Liddisale Echo Hengerveld, 2d Culver on Springbrook Darkness, 3d Larsen on Drosky Sadie Vale Cornucopia, 4th Maxwell Farms on Lady Lyons Beets, 5th Messer Farms on Japka Korndyke De Kol; four year old (2 shown), 1st Messer Farms on Jewel Walker Gerben of Cedarside, 2d Iowana Farms on Iowana Rue De Kol Burke; three year old (4 shown), 1st Larsen on Bracelet Clothilde Korndyke, 2d and 4th Iowana Farms on Iowana Rose and Iowana Jane, 3d Messer Farms on Aaggie Gerben Netherland; 2d, two year old (8 shown), 1st, 2d and 4th Messer Farms on Nellie Segis Pontiac, Eudora Pontiac Colantha, Velma Walker Segis of Cedarside, 3d and 6th Culver on South Side Inka De Kol and Far Oaks Ideal Ormsby, 5th Iowana Farms on Iowana Fayne Cocoms; 18 months and under two years (10 shown), 1st Iowana Farms on Edenwold Aaggie Boss, 2d and 6th Messer Farms on Gracia Johanna Segis of Cedarsale and Jewel Walker Segis Pontiac, 3d Culver on Far Oaks Skylark Ormsby, 4th Larsen on Fornim Harlog Rauwerd, 5th Maxwell Farms on K. S. P. Lilly McKinley; 12 months and under 18 (9 shown), 1st Larsen on Fornim Aaggie De Kol, 2d and 4th Messer Farms on Eudora Maid Pontiac Ormsby and Ormsby Buffalo Mercedes 2d, 3d and 5th Iowana Farms on Iowana Rue Burke Colantha and Iowana Homestead Pietertje; senior calf (13 shown), 1st and 2d Messer Farms on Larky De Kol Pontiac Segis and Nell Hengerveld Segis, 3d Maxwell Farms on Rag Apple Ormsby Hengerveld, 4th Iowana Farms on Iowana De Cola Ollie, 5th Culver on Far Oaks Miss Ormsby Ray, junior calf (9 shown), 1st Culver on Pietertje Wayne Rag Apple King, 2d Iowana Farms on Iowana Waldorf Coronis, 3d and 5th Messer Farms on Miss Johanna Segis Korndyke and Queen Ormsby Johanna Segis, 4th Maxwell Farms on unnamed; cow having official yearly record begun at 5 years or over, Messer Farms on Japka Korndyke De Kol; cow having official yearly record begun at 2 years under 5 (4 shown), 1st, 2d, 3d and 4th Iowana Farms on Fryslan Waldorf, Iowana Rose, Iowana Rue De Kol Burke and Iowana Jane.

Senior and grand champion bull, Iowana Farms on Oak De Kol Ollie

FEDERAL TIRES
DOUBLE CABLE BASE

This is the tire for our car hereafter.

See that strong gripping tread. It wears remarkably well and acts the same as the strips on the wheel of a tractor.

Another good thing about Federal Tires is their stay-on security. They can't leave the rim even on the roughest and toughest roads. Yet they slip off easily when necessary.

Built into the base of each Federal Tire are four strong steel cables which anchor the tire securely to the rim against the hardest service strains. It is an added strength and safety feature found only in Federal Tires.

Made in white Rugged and black Traffik non-skid treads. For sale by leading dealers.

The Federal Rubber Company of Illinois
Factories, Cudahy, Wis.

Manufacturers of Automobile Tires, Tubes and Sundries; Motorcycle, Bicycle and Carriage Tires; Rubber Heels, Fibre Soles, Horse Shoe Pads, Rubber Matting and Mechanical Rubber Goods. (5)

Auto-Fedan Hay Press

2-Horse 3-Stroke Self-Feed.
Guaranteed

Two men can run it. Saves ⅔ the labor. Takes a feed with division board. Absolutely safe.

Catalog Free

Homestead; junior champion bull, Iowana Farms on Iowana Burke Fayne; senior and grand champion cow, Iowana Farms on Fryslan Waldorf; junior champion female, Iowana Farms on Edenwold Aaggie Bess; exhibitor's herd (5 shown), 1st, Iowana Farms, 2d and 4th Messer Farms, 3d Culver, 5th Larsen; breeder's young herd (5 shown), 1st Messer Farms, 2d Iowana Farms, 3d Larsen, 4th Culver, 5th Maxwell Farms; calf herd (4 shown), 1st Messer Farms, 2d Iowana Farms, 3d Culver, 4th Maxwell; R. B. Young's special cup, bull and two heifers under one year won by Messer Farms; get of sire (8 shown), 1st Iowana Farms, 2d, 3d and 5th Messer Farms, 4th Larsen; produce of cow (6 shown), 1st and 2d Messer Farms, 3d Larsen, 4th Iowana Farms, 5th Culver; advanced registry cow, won by Messer Farms; dairy herd (2 shown), 1st Messer Farms, 2d Iowana Farms.

Jerseys.—Quality was the outstanding feature of the Jersey show. Five herds, totaling 70 animals, gave the lovers of the Jersey breed plenty to look at. Championship honors in the female classes in at least two cases went to cows that had proved their ability to make records. The senior and grand champion cow, Manor's Noble Queen, has an R. O. M. record of 10,625.3 pounds of milk and 702.71 pounds of butter. The four-year-old cow, Stockwell's Noble Wonder, has a three-year-old record of 456.12 pounds of butter. Both cows are owned by E. C. Lasater, the great Texas Jersey man. The champion and grand championship honors in the bull classes went to Longview Farm, of Lees Summit, Mo. Both the grand champion and the junior champion bull were excellent specimens of the breed. In the aged bull class Thompson Farm Sans Oloi might have placed higher than third had he been better fitted. An especially strong line-up of heifers, every one of which had extremely good quality, gave Judge C. H. Staples, of Baton Rouge, La., plenty to do. However, the judging was consistent throughout, the smaller, higher-quality animals getting the preference over animals with plenty of scale, but somewhat off in type and quality. The difficulty of breeding an animal free from beefiness and at the same time with plenty of size was shown in several instances. Several individuals showed too much beefiness to be truly representative of the Jerseys. Most of these animals had the weight, but lacked length and depth which the Jersey breeder expects when these two qualities are emphasized.

Exhibitors—E. C. Lasater, Falfurrias, Texas; Longview Farm, Lees Summit, Mo.; Myrtle E. & Earl F. Pyle, Clarksville, Ohio; Will Thompson, Jesup, Iowa; F. D. Underwood, Wauwatosa, Wis.; J. P. Brown, Parkersburg, Iowa. Judge, C. H. Staples, Baton Rouge, La.

Aged bull (4 shown), 1st Longview Farm on Viola's Majesty's White Sox, 2d Lasater on Raleigh's Oxford Prince, 3d Thompson on Thompson Farm Sans Aloi, 4th Underwood on Pennithorpe's Raleigh; three year old (1 shown), Lasater on Mon Plaisir's Majesty of F.; two year old (2 shown), 1st Longview Farm on Warder's Chieftain, 2d Lasater on Adan's Noble of Texas; yearling (5 shown), 1st and 4th Longview Farm on Poet's White Heart and Hope's Financial Raleigh, 2d and 5th Pyle on Sans Aloi's Niece's King and Fox, 3d Lasater on Bright Eminent Lad; senior calf (6 shown), 1st and 4th Longview Farm on Chief Raleigh and Jolly Snowstorm, 2d and 6th Lasater on Carnation's Village Knight and Oxford's Majesty of La Mota, 3d Pyle on Richmond King, 5th Underwood on Fewacres Lord Alonzo; junior calf (3 shown), 1st Longview Farm on Emily's Poet, 2d Lasater on Easter's Combination, 3d Pyle on Stockwell.

Aged cow (7 shown), 1st, 2d, 4th and 5th Lasater on Manor's Noble Queen, Martha You'll Do, Majesty's Lady Wave of F. and Majesty's Champion Oonan, 3d Longview Farm on Fairy Lad's Wolff, 6th Underwood on Distinction's Oxford Bell; four year old (2 shown), 1st Lasater on Stockwell's Noble Wonder, 2d Longview on Golden Fern's Silver Thread; three year old (6 shown), 1st Longview Farm on Raleigh's Eminent Buttercup, 2d Underwood on Noble's Financial Meg, 3d and 4th Lasater on Constance of Falfurrias and Majesty's Fairy Victress; two year old (6 shown), 1st and 2d Lasater on Rochette's Noble Alice and Eminent Lad's Island Star, 3d Underwood on Noble Hephzibah, 4th Longview Farm on Fontaine's Pretty Maiden, 5th and 6th Pyle on Martell's and You'll Do's Mayflower; senior yearling (7 shown), 1st and 2d, Lasater on Cowslip's Favorite Fern and Vixen's Oxford Charlotte, 3d and 4th Longview Farm on Raleigh's Golden Kittie and Raleigh's Young Fontaine, 5th Thompson on Hallowe'en's Beautiful Fox; junior yearling (7 shown), 1st Lasater on Great Scott's Brightness, 2d and 3d Longview Farm on Fontaine's Nema and Gay Lady Raleigh, 4th and 5th Pyle on Silver You'll Do and Oakland Lady; senior calf (6 shown), 1st Longview Farm on My Rosary, 2d, 3d and 4th Lasater on Aldan's Oxford Fontaine, Aldan's Noble Gleenie and Village Knight's Jessica, 5th Underwood on Fewacres Lady Maud; junior calf (6 shown), 1st, 2d and 5th Longview Farm on Raleigh's Velvet, Raleigh's Oxtivity and Chieftain's Flora, 3d and 4th Lasater on Great Scott's Eminent Fancy and Great Scott's Noble Queen; cow having official yearly record begun at 5 years or over (3 shown), 1st and 2d Lasater on Manor's Noble Queen and Raleigh's Island Star, 3d Longview on Fairy Lad's Wolff; cow having official yearly record begun at 2 years, under 5 (7 shown), 1st, 3d and 5th Lasater on Stockwell's Noble Wonder, Constance of Falfurrias and Majesty's Champion Oonan, 2d and 4th Longview Farm on Undulata Nena and Fontaine's Pretty Maiden.

Senior and grand champion bull, Longview Farm on Viola's Majesty's White Sox; junior champion bull, Longview Farm on Poet's White Heart; senior and grand champion cow, Lasater on Manor's Noble Queen; junior champion cow, Lasater on Great Scott's Brightness; cow with official record, Longview Farm on Viola's Majesty's White Sox, butter 702.71, milk 10,625.3 pounds; exhibitor's herd (3 shown), 1st and 3d Lasater, 2d Longview Farm; breeder's young herd (3 shown), 1st and 4th Longview Farm, 2d and 3d Lasater, 5th Pyle; calf herd (2 shown), 1st Longview Farm, 2d Lasater; get of sire (6 shown), 1st and 2d Longview Farm, 3d Underwood, 4th Lasater, 5th Pyle; produce of cow (6 shown), 1st Lasater, 2d Thompson, 3d, 4th and 5th Longview Farm; advanced registry cow, Lasater; dairy herd (5 shown), 1st and 3d Lasater, 2d Longview Farm, 4th Underwood, 5th Pyle.

Guernseys.—The Guernsey exhibit was equal in quality to previous shows, especially so in the top places. In numbers it was not quite as good as last year, but the 10 exhibitors entered approximately 70 animals for the various prizes. The heaviest winner of the show was W. W. Marsh, of Waterloo, Iowa, with D. D. Tenney, of Crystal Bay, Minn., showing much of the same blood as the Marsh herd, running a close second. The judging of the Guernseys did not proceed as smoothly as in the other breeds and was full of surprises to breeders and visitors alike. Considerable sideline discussion resulted from the placing of Ladysmith's Cherub in second place in the aged bull class. Imp. Kenilworth Gold had neither the scale, the depth nor the straightness over the rump that the Tenney bull showed. Several other placings were also decidedly questionable. Nevertheless the show was a good one, splendid males, heifers and aged females being entered. In the division for cows with official yearly record begun at two years and under five the five first cows had the exceptional records quoted above and all of the eight cows entered in this class had with their type the production records to justify their presence. Most of the winners at least will travel to Columbus to take part in the great National showing.

Exhibitors—Rookwood Farm, Ames, Iowa; Dairyland Farm, Storm Lake, Iowa; John Ebels, Holland, Mich.; Iowa State College, Ames, Iowa; C. L. Kerr & Son, Manilla, Iowa; D. D. Tenney, Crystal Bay, Minn.; W. W. Marsh, Waterloo, Iowa; Mountain Bros., Des Moines, Iowa; Kansas State Agricultural College, Manhattan, Kan. Judge, J. J. Hooper, Lexington, Ky.

Aged bull (3 shown), 1st Marsh on Imp. Kenilworth Gold, 2d Tenney on Ladysmith's Cherub, 3d Kerr on Dairymaid's Pride of Mapledell; two year old (3 shown), 1st Mountain Bros. on Cherub's Winner, 2d Ebels on L'Aiglon of Bon Ayre, 3d Dairyland Farm on Regal of Waveland; yearling (5 shown), 1st Kansas Agricultural College on Langwater Benefactor, 2d and 3d Marsh on Imp. Harfield and Imp. Kitchener's Express, 4th Tenney on Sequel's Duke of Shorewood, 5th Dairyland Farm on College Star's Dairyman; senior calf (6 shown), 1st Marsh on Dairymaid's Memento, 2d Rookwood Farm on Rookwood Cherub, 3d Yoder on Lily's May King, 4th Dairyland Farm on Gov. of Ames, 5th Ebels on Dora's King of Butternut Hill; junior calf (6 shown), 1st and 4th Marsh on Pine Blossom's Cherub and Lady Mary's Cherub, 2d Tenney on Althea's Pride of Shorewood, 3d and 5th Dairyland Farm on Primrose Holden and Barbi's Holden.

Aged cow (7 shown), 1st, 3d and 5th Tenney on Imp. Althea of Sarnia, Imp. Dairymaid IV of the Duvaux and Imp. Rosette of Marais Farm, 2d and 4th Marsh on Hayes Express VII and Imp. Hayes Express V; four year old (3 shown), 1st and 2d Marsh on Imp. Hayes Express IX and Imp. Hayes Golden Cherry 12th, 3d Ebels on Lizette

Get Hens Ready for Winter Laying

Put them in top-notch condition, now in the Fall, and you'll get big returns in the egg basket later on.

DR. HESS POULTRY PAN-A-CE-A

Will Start Your Pullets and Moulted Hens to Laying

The moulting season is on. It's the most trying time of all the year for poultry. You know it takes a good deal of extra strength to grow all those new feathers. Pan-a-ce-a is a great help to your moulting hens because it enriches the blood, gives better appetite, aids the digestion, which gives them the extra strength required to force out the old quills and grow the new feathers.

Then, when the moult is over, you want your hens to start in promptly to laying again. Don't forget that they have been through something nearly like a long spell of sickness. Feed Pan-a-ce-a to restore their good feeling, to make them strong and healthy, to liven up the dormant egg organs and put them in real egg-laying trim. Pan-a-ce-a will do all these things for your poultry.

There is a dealer in your town that will supply you with Dr. Hess Poultry Pan-a-ce-a for your flock. It's to help your poultry through the moult—it's to start your pullets and moulted hens to laying, otherwise he will refund your money. Packages, 25c, 60c and $1.25. 25-lb. pail, $2.50; 100-lb. drum, $9.00. Except in the far West and Canada.

DR. HESS & CLARK, Ashland, Ohio

DELCO-LIGHT

Over 40,000 owners of farms, country homes and stores, throughout the world, representatives of over sixty different lines of business are finding DELCO-LIGHT to be a dependable and trustworthy electric light and power plant.

Here is just one of the thousands of testimonial letters on file:

The Delco-Light System installed at my farm is entirely satisfactory in every way. I congratulate you on having perfected a plant that solves the problem for farmers, and one that is so simple that anybody can learn to operate it in a few moments. John E. Eastman, Publisher, Chicago Daily Journal.

Heed Your Nation's Call!

Cultivate Montana's Vast Acres

Wilson Urges Farmers to Aid With Big Crops

WASHINGTON, April 10.—President Wilson today sent the following letter to the National Agricultural society, in session in the New Willard hotel:

"Gentlemen: At the present moment it is our plain duty to take adequate steps that not only our own people be fed, but that we may, if possible, answer the call for food of other nations now at war.

"In this greatest of human needs I feel that the American farmer will do his part to the uttermost.

"By planting and increasing his production in every way possible, every farmer will perform a labor of patriotism for which he will be recognized as a soldier of the commissary adding his share to the food supply of our people.

(Signed) "WOODROW WILSON."

"It's Up To the American Farmer"

From the Chicago Examiner

The supreme need of the allied democratic nations is food. In Montana there are millions of acres of rich virgin land awaiting the plowshare to convert them into food producing areas.

Go to Montana. It is your opportunity to serve your country in its present crisis and to help yourself to future independence.

In the quality of its grains and yield per acre Montana stands first—yet land there can be bought at reasonable prices. There is not another State in the Union where a day's work or a dollar spent in agricultural enterprise will bring such large returns and amid living conditions which are so uniquely delightful.

By investing over twelve million dollars for the electrification of its line across the state, the *"St. Paul Road"* has answered the question, "Can I safely invest in a Montana farm?"

Chicago, Milwaukee & St. Paul Ry.

Don't wait—investigate these opportunities NOW.

Hayes Mabel; exhibitor's herd, 1st Marsh, 2d Tenney, 3d Dairyland Farm, 4th Ebels; breeder's young herd, (2 shown), 1st Marsh, 2d Ebels; calf herd (3 shown), 1st Marsh, 2d Tenney, 3d Ebels; get of sire (4 shown), 1st Marsh, 2d Tenney, 3d Dairyland Farm, 4th Ebels; produce of cow (5 shown), 1st and 2d Marsh, 3d Tenney, 4th Dairyland Farm, 5th Ebels; advanced registry cow (2 shown), 1st Marsh, 2d Ebels; dairy herd (3 shown), 1st Marsh, 2d Tenney, 3d Ebels.

Ayrshires.—Quality was more in evidence in the Ayrshire show this year at the Dairy Cattle Congress than it was in 1916, although there was a small decrease in the number of head shown. This year 50 head were led into the ring and every animal was a credit to the breed. Six head was the largest showing in any one class, but the placing resolved itself down to such close points that the contest was full of interest throughout. James G. Watson, of Braden, Vt., who tied the ribbons, pronounced the showing one of splendid quality and uniformity. In the sweepstakes classes, Bargenoch Rising Star, of the Van Etta herd, came to the front as senior champion. He is an outstanding dairy bull of fine type and quality and succeeded in winning both the senior and grand champion ribbons at Waterloo last year. This year, however, he lost the grand championship to the junior champion, Cavalier's Lord Stewart, a Seitz bull, which as a yearling showed great conformation and dairy type. In the female honors, the stylish aged cow of Adam Seitz, Imp. Oldhall Beauty 8th, took the senior and grand champion purples without great difficulty. Good Gift's Nona, a senior yearling heifer of the Galloway herd, was made junior champion. She is a heifer of good character and quality, but lacks the style of the older cow. Taken as a whole the Ayrshire show was a decided success, in spite of the fact that it fell somewhat below last year's record in point of numbers.

Exhibitors—William Galloway, Waterloo, Iowa; C. H. Peverill, Waterloo, Iowa; Adam Seitz, Waukesha, Wis.; James Van Etta, Lima Center, Wis. Judge, James G. Watson, Brandon, Vt.

Aged bull (2 shown), 1st Van Etta on Bargenoch Rising Star, 2d Galloway on Auchenbrain Good Gift; two year old (2 shown), 1st Seitz on Cavalier's Lord Roseberry, 2d Galloway on Cavalier's Merry Lad; yearling (1 shown), Seitz on Cavalier's Lord Stewart; senior calf (4 shown, 1st Seitz on Cavalier's Beuchan Lindsay, 2d Van Etta on Madison of Cloverdale, 3d Peverilll on Enid's Good Gift, 4th Galloway on Lucius Good Gift; junior calf (4 shown), 1st and 4th Seitz on Cavalier's Rising Archer and Cavalier's Beuchan Silver Tips, 2d Van Etta on Cloverdale's Ringmaster, 3d Galloway.

Aged cow (6 shown), 1st and 2d Seitz on Imp. Oldhall Beauty 8th, and Imp. Hillhouse Maud 2d, 3d and 4th Van Etta on Grace of Ritchfield and White Lily of Meadowbrook, 5th Galloway on Oldhall Sarah of Scotland Farm; three year old (1 shown), 1st Van Etta on Rose Winnie, 2d and 3d Seitz on ——— and Imp. Blackbyres Lady Walker, 4th Peverill on Lessnessock Carlton; two year old (5 shown), 1st and 5th Galloway on Nona Spencer and Rose Good Gift, 2d and 3d Seitz on Cavalier's Lady Mary Stuart and Cavalier's Maud 2d, 4th Van Etta on Rose May of Aldebaran; senior yearling (4 shown), 1st and 4th Galloway on Good Gift's Nona and Good Gift's Clemie, 2d Van Etta on Cavalier's Fleckie, 3d Seitz on Wanderer's Narcissus; junior yearling (3 shown), 1st and 2d Seitz on Cavalier's Lady Bountiful and Cavalier's Kilnford Dorothy, 3d Van Etta on Cloverdale Lady Bountiful; senior calf, 1st, 2d and 3d Seitz on Cavalier's Beuchan Queen, Cavalier's Kilnford Bell, 3d and Cavalier's White Lady, 3d Van Etta on Cavalier Cloverdale's Violet, 5th Galloway on Lady Ethel Good Gift; junior calf (6 shown), 1st Seitz on Cavalier's Kilnford Lily, 2d and 3d Van Etta on Cloverdale's Cream Pot and Phyllis of Cloverdale, 4th and 5th Galloway on Minnie Good Gift and unnamed; cow with official record begun at 5 years or over (3 shown), 1st Seitz on Imp. Oldhall Beauty 8th, 2d Van Etta on White Lilly of Meadowbrook, 3d Galloway on unnamed; cow with official record begun at 2 years and under 5 (1 shown), Seitz on Imp. Hillhouse Maude.

Senior champion bull, Van Etta on Bargenoch Rising Star; junior and grand champion bull, Seitz on Cavalier's Lord Stewart; senior and grand champion cow, Seitz on Imp. Oldhall Beauty 8th; junior champion cow, Galloway on Good Gift's Nona; exhibitor's herd (3 shown), 1st Seitz, 2d Galloway, 3d Van Etta; breeder's young herd (2 shown), 1st Seitz, 2d Van Etta, 3d Galloway; calf herd (3 shown), 1st Seitz, 2d Van Etta, 3d Galloway; get of sire (4 shown), 1st and 3d Seitz, 2d Galloway, 4th Van Etta; produce of cow (4 shown), 1st Galloway, 3d Van Etta, 2d, 4th and 5th Seitz; advanced registry cow (1 shown), Seitz; dairy herd, 1st Seitz, 2d Van Etta.

Brown Swiss.—A keen battle between two veteran breeders made up the show of Brown Swiss cattle at the Dairy Cattle Congress this year. Thirty-two head were exhibited from the herds of Hull Bros., of Painesville, Ohio, and Ira Inman, of Beloit, Wis. Prof. S. S. Gillette, of Ames, Iowa, who tied the ribbons, found the classes unusually close, although Hull Bros., in the end got a little the best of the contest. While in numbers the various classes were lacking, yet no fault could be found with the quality of the animals displayed and the showing was particularly uniform throughout.

Exhibitors—Hull Bros., Painesville, Ohio; Ira Inman, Beloit, Wis. Judge, L. S. Gillette, Ames, Iowa.

Aged bull (2 shown), 1st Hull Bros. on Dick of Lake View, 2d Inman on Lot of Lakeview; two year old (2 shown), 1st Hull Bros. on McCoy H., 2d Inman on Johann College Boy; yearling (2 shown), 1st Hull Bros. on Bogel's College Boy, 2d Inman on Flora Duwire's Grand Son; calf (5 shown), 1st Inman on Jessie's Lot, 2d, 3d, 4th and 5th Hull Bros. on unnamed, Supreme Lake View, Kololo of Lakeview, Mercedes of Lake View.

Aged cow (4 shown), 1st and 3d Hull Bros. on Swiss Valley Girl 7th and Lottie G. D., 2d and 4th Inman on Alice Hanson and Jessie J.; three year old (1 shown), Hull Bros. on Ruth Wilson 2d; two year old (3 shown), 1st Hull Bros. on Swiss Valley Girl 9th, 2d and 3d Inman on Hilda's Butter Girl and Virginia K.; yearling (4 shown), 1st and 4th Inman on Rock River Girl and Lady Trilby, 2d and 3d Hull Bros. on Vera of Lake View and Dorothy Downer of Lake View; calf (6 shown), 1st, 3d and 5th Inman on Lottie Brown, May Maiden and True Blue, 2d and 4th Hull Bros. on Belle of Lake View and Katie of Lake View; cow with official record begun at 5 years or over (2 shown), 1st and 2d Hull Bros. on Swiss Valley Girl 7th and Lottie G. D.; cow with official record begun at 2 years, under 5 (2 shown), 1st Hull Bros. on Swiss Valley Girl 7th.

Senior and grand champion bull, Hull Bros. on Dick of Lake View; junior champion bull, Hull Bros. on Bogel's College Boy; senior and grand champion cow, Hull Bros. on Swiss Valley Girl 7th; junior champion cow, Hull Bros. on Swiss Valley Girl 9th; exhibitor's herd (3 shown), 1st Hull Bros., 2d and 3d Inman; breeder's young herd (2 shown), 1st Hull Bros., 2d Inman; calf herd (2 shown), 1st Inman, 2d Hull Bros.; get of sire (3 shown), 1st and 3d Hull Bros., 2d Inman; produce of cow (4 shown), 1st and 3d Hull Bros., 2d and 4th Inman.

Upper Wisconsin.

Cost of Clearing Wisconsin Land.

To the Editor:—Knowing that I am familiar with the handling of dynamite, many people in this neighborhood ask me what it costs to blast stumps and boulders.

I recently blasted twenty-two large boulders and twenty-four large stumps with forty-three pounds of 40 per cent dynamite. The stumps ran from six inches to three feet in diameter. The charges ranged from one pound to four and one-quarter pounds of dynamite. The cost of the dynamite, caps and fuse was $12.60.

For the stumps three feet in diameter I found it advisable to divide my charge into two parts placed under different sections of the stumps in order to get a cumulative effect. To do this, however, requires the use of a blasting machine and electric blasting caps, because fuse, even if cut into two exactly equal lengths, will not burn down to the charge in exactly the same time. If the first charge goes off an instant ahead of the other one the second charge is very apt to be blown out or the tamping around it loosened so that the effect of it is lost.

In blasting the boulders, I place my charges in holes drilled into the rocks. This method requires more time, but saves dynamite. This is proven by the fact that I broke the twenty-two boulders with three pounds of dynamite, fifteen feet of fuse and twenty-two blasting caps. Henry Ruzek.

Trapping Season Is Approaching

Wisconsin Open Seasons as Fixed by Last Legislature—A Good Chance to Have Some Sport and Make Some Money.

A NICE bit of money is in store for the farmer who has the time to do a little trapping this winter. The open season for capturing the fur-bearing animals in Wisconsin is only a few weeks distant. The exact dates for trapping wild animals in each county were established by the last legislature. A copy of these dates is printed below.

In looking over last year's records of one fur house which buys skins in Wisconsin, many cards showed large payments to certain shippers within short periods. Most of these shippers to which this fur house makes payments are not professional hunters or trappers. They are for the greater part men and boys from the farms who have made the sport serve as a means of not only paying hunting expenses, but at the same time paying them well for the time spent in the work. One fellow who makes out especially well each season is a farmer during the summer, but in the winter he hires enough help so that the farm can get along without his services and he puts in all his days trapping. He makes a good bit of money each year.

Wisconsin furs are eagerly sought by the raw fur houses. There is something in the covering of the wild animals of this state which makes them superior in quality. The price lists of all concerns regularly show Wisconsin furs equal or higher in price to those of any other state. Muskrat and coon from this state are rated as the best in the world.

Dealers prefer the muskrat, raccoon and fox furs. However, the skunk, mink and muskrat, being more numerous, form the heaviest part of the season's trade. Then there are squirrels and rabbits in most counties in plenty, but the furs of these animals do not bring any prices on the market.

There is plenty of trapping going on in Wisconsin each year as the records will show. Within a radius of ten miles of Madison one dealer alone purchased $15,000 of raw furs last season. More than 50,000 shippers sell to this house.

There are certain provisions in the law which make it unlawful to use any other means than traps in capturing the animals. The methods of taking fur-bearing animals as defined in the fish and game law enacted this year are as follows: (1) No person shall hunt any fisher, marten, mink or muskrat with the aid of any spear, gun or dog, disturb or molest any raccoon den or tree for the purpose of capturing the raccoons, or any muskrat house, beaver house or beaver dam; or set any trap or traps at any time within 500 feet of any beaver house or beaver dam. (2) The owner or occupant of any land, and any member of his family may without license hunt thereon rabbits at any time, and squirrels during the open season therefor. (3) Except as provided in sub-section (2), no person shall have in his possession or under his control, or use, for hunting rabbits, any ferret, snare, trap or any device or contrivance designed or used for the purpose of driving rabbits out of their holes or dens. The owner or occupant or any person upon written request of the owner or occupant of any land in the county of Door may use a ferret thereon for hunting rabbits.

The prices for furs on certain animals are low in the fall, higher in midwinter and best towards spring. However, the average from skunk furs will run from $1 to $7 graded according to size and condition of the fur and the age of the animal. Raccoons will bring from $1 to $7 based on size and weight of the fur. Minks bring the lowest price when the fur is pale and the best price when the fur is dark and extra large. Muskrats are quoted according to size and the season of the year. Foxes will run as high as $900, for black and silver fox.

Most houses have their price lists which they send to the shippers each month. The house pays express.

The trapping supplies are not out of reach of anybody, as for the muskrat the single-spring trap with a spread of four inches can be purchased for a little over $1 a dozen. The trap for mink and coons is somewhat larger and runs right around $2 a dozen. For foxes and frequently for coons, coyotes, etc., a double spring trap is used with a five and one-fourth-inch spread of jaw and weighing two pounds. These cost about $4 a dozen.

The close season for wild animals is established for each variety. No person, according to the law, shall hunt or trap at any time other than the open season listed beneath, nor trap, kill or capture animals in excess of the number designated opposite each variety in the column headed "bag limit." The table published herewith is taken from the fish and game law. Complete copies of this law can be obtained by writing to the state conservation commission, Madison.

WISCONSIN TRAPPING SEASONS.

Kind of Animal and Locality	Open Season	Bag Limit
(1) Moose, elk	None	
(2) Deer:		
(a) Any deer in the velvet or in the red or blue coat, in any county	None	
(b) Any deer in the counties of Adams, Brown, Buffalo, Calumet, Columbia, Crawford, Dane, Dodge, Door, Dunn, Fond du Lac, Grant, Green, Green Lake, Iowa, Jefferson, Juneau, Kenosha, Kewaunee, La Crosse, Lafayette, Manitowoc, Marquette, Milwaukee, Monroe, Outagamie, Ozaukee, Pepin, Portage, Racine, Richland, Rock, Sauk, Sheboygan, Vernon, Walworth, Washington, Waukesha, Waupaca, Waushara, and Winnebago	None	
(c) Any deer not specified in paragraph (a) in any county not specified in paragraph (b)	Nov. 21 to Nov. 30.	One each year.
(3) Bear	Nov. 10 to Dec 1...	No limit.
(4) Beaver, otter	None	
(a) Beaver in Price, Rusk and Sawyer counties as stipulated in subsection (5) of section 29.59	Dec. 1 to Dec. 31. 1917 and 1918....	No limit.
(5) Fisher, marten, mink, skunk	Nov. 15 to Feb. 1...	No limit.
(6) Muskrat:		
(a) In the counties of Polk, Barron, Rusk, Price, Lincoln, Langlade, Forest, Marinette, Florence, Iron, Oneida, Vilas, Ashland, Washburn, Sawyer, Burnett, Douglas, Bayfield	Oct. 25 to April 20..	No limit.
(b) In other place	Oct. 25 to April 10..	No limit.
(7) Raccoon	Oct. 15 to Jan. 1....	Five each day.
(8) Squirrels of any variety	Oct. 15 to Jan. 1....	Five each day.
(a) In Dodge, Kenosha, Racine, Waukesha, Washington, Ozaukee, Milwaukee counties	None	
(9) Rabbit.		
(a) In Columbia, Crawford, Door, Grant, Iowa, Jackson, Juneau, Monroe, Outagamie, Pierce, Polk, Richland, Rusk, Sauk, Sawyer, Sheboygan, and Winnebago counties	All year	No limit.
(am) In Dane county	Oct. 1 to March 1..	No limit.
(b) In Dodge, Jefferson, Kenosha, Ozaukee, Racine, Walworth, Washington and Waukesha counties	Nov. 1 to Jan. 1....	Five each day.
(c) In Clark, Green and Wood counties	Oct. 15 to Feb. 1....	Ten each day.
(d) In any other place	Sept. 7 to Feb. 1....	No limit.

CURRENT EVENTS

THE war tax bill, designed to raise approximately two and one-half billion dollars by taxation within the next year, was signed by President Wilson last week. It affects every citizen in the country, raising the prices of almost everything needed from the cradle to the grave. Among the most important taxes are those on incomes (4 per cent above the annual income of $3,000 for single persons and $4,000 for married), a 3 per cent tax on automobiles (to be paid by the manufacturer), raising the letter postage rates to 3 cents an ounce with post cards going for 2 cents instead of 1, increasing the rates on newspapers and magazines, 8 per cent tax on the price of railroad tickets, $8 for every $100 of the premium of a life insurance policy and so on. It is expected that the increase in first-class postage will raise an additional $70,000,000 in the year, while the second-class mail will add $6,000,000 and the munition manufacturers tax will raise $25,000,000. The new tax touches directly or indirectly the pocketbook of everybody in the country, through taxes on incomes, excess profits, liquor, tobacco, soft drinks, passenger and freight transportation, proprietary medicines, chewing gum, amusements, musical instruments, talking machine records and many other things. A bitter attack on the zone system for second-class mail was made by Senators Smoot, of Utah, and Hitchcock, of Nebraska. Senator Smoot said passage of that part of the bill was the greatest mistake the senate had made in many generations, and gave notice that he would move to repeal the zone system at the next session of congress. Calling attention to the fact that second-class mail, under the new system, may be sent to Siberia, Australia and Canada at lower rates than it can be sent to Washington, Oregon, California, Utah and the other western states, Senator Smoot, asked: "What right have you to penalize the people of these states simply because they do not happen to live near the great centers of publication?"

HAVING been bombed repeatedly by aeroplanes, the English public is insistently demanding reprisals. Heretofore, the English authorities have absolutely refused to massacre women and children in German towns and cities, as the Germans have done in England, but last week Premier Lloyd George announced that Germany would be paid back, for its aeroplane raids, with compound interest. Already several hundred lives have been lost in London and English coast towns by means of these air raids and the injured are three or four times the number of the killed. The worst of it is that so many of the victims have been women and little children, killed at school, in their homes and walking or playing in the streets. The English were driven to the use of liquid fire and gas in fighting, having refused for quite a time to use these weapons against their enemies, and now it may be that they will be obliged to use aeroplanes to kill noncombatants as the Germans have done. Last week French aeroplanes started making reprisals, bombing two German cities twice, with what havoc remains to be told. While this is going on, General Haig is launching another terrific drive against the Germans in northern France, making ground gains, but at a heavy cost in human life. Winter will soon set in and little can be done then until spring, by which time the United States forces in the field will be a factor not to be scorned even by the haughty kaiser.

SPEAKING at Toledo, Ohio, Secretary of the Treasury William G. McAdoo declared that the failure of a single issue of government bonds would be worse for America than a disaster upon the field of battle. "A few days ago, he said, "I read the following manifesto issued in Berlin by the League of German Municipalities: 'If money talks, the president of the United States may learn by October 18th, when the subscription lists close, that the echo of the new war fund given by the German people will have drowned out completely the clamor of unending protests which his reply to the pope has given stimulus.' Let us meet that challenge by a subscription to our second liberty loan on the 27th day of October, nine days after the close of the German loan, which will make clear to the German military despotism that America marshals not alone her brave soldiers upon the field, her invincible navy upon the high seas, her industries throughout the length and breadth of this land, but as well her entire financial resources."

AUSTRIA continues to make overtures for peace, it being plainly evident that she, at least, has had all the war she desires. The Austrian reply to the pope's peace overtures was considered as sincere even by Austria's enemies. She has followed this up, within the last few days, by this public declaration by her prime minister of foreign affairs: "The millions who are fighting in the trenches or behind the lines wish to know why and for what they are fighting. They have a right to learn why peace, which the entire world desires, has not yet come. When I was appointed to my post I utilized the first opportunity to declare openly that we did not want to oppress anyone, but, that on the other hand, we would not suffer any oppression and that we were prepared to enter peace negotiations as soon as our enemies accepted the standpoint of peace by agreement." He went on to assert that just as soon as the freedom of the seas was firmly established no nation would longer be in need of a great fleet, but could disarm its maritime forces. The standing armies of the nations would be needed longer, he maintained, but he added that the pope's appeal for universal disarmament was not a mere dream, but might be brought about some day. There is a growing conviction that Austria is tired of its bargain with Germany and would gladly welcome a chance to stop fighting, so long as the empire is maintained.

LABOR troubles on the Pacific coast and the western mountain states will be investigated by a special commission, headed by Secretary of Labor Wilson, appointed by President Wilson to represent him personally. The commission will leave soon and probably will spend several weeks in the West, conferring with labor leaders, employers, I. W. W. agents, state governors and others who can shed light on past disagreements or exert influence for future industrial harmony. The president in his announcement said he is anxious to learn the truth of the charges of injustice made by employers and labor men against each other and to work out some fair basis for avoiding the interferences of labor disputes with industry during the war. The present strikes in Pacific coast shipbuilding plants, which the federal shipping board is trying to settle to avoid further delay in its shipbuilding program, is only one phase of the situation to be investigated. It is understood special attention will be given to charges of American Federation of Labor officials that employers in Arizona have encouraged and even financed I. W. W. activities for the sake of discrediting the labor movement among miners and other employes. Recent deportations of workers also will be the subject of inquiry.

UNLESS some new outbreak of submarine activity develops, many officials are satisfied that the situation is fairly well under control. Encouraging results have been obtained through convoying of fleets of merchant craft, the loss having been reduced to less than one-half of 1 per cent. The employment of smoke screen, kite balloons and other detection devices also has shown good results and progress is being made with the reduction of smoke from merchantmen and by painting ships to make them almost invisible at a distance through a periscope. The "smoke box," a device to be thrown overboard from a vessel when a submarine appears, has proved highly successful in some cases. A great smoke rises instantly when the chemicals in the box come in contact with the water and under the screen the vessel has opportunity to change her course. Experimenting continues with many other devices. Thomas A. Edison is still at work on investigation to which he devoted himself at the outbreak of the war.

TANNERS and wholesale leather dealers in New York City estimated the other day that more than 1,000,000 sole leather hides and about 300,000 hides suitable for "uppers" are being held in storage warehouses at the orders of packers, importers and speculators, who are "holding out" for a higher market. The warehouses are literally bursting with hides. The demand for storage space is so much greater than the supply that the storage companies are leasing all the adjacent properties they can get and some are actually refusing to receive any further consignments of hides until they can enlarge their facilities. Although the prices for shoe leather hides are higher today than ever before known—more than twice as high as they were in 1908—the companies dealing in hides refuse to sell at these prices, and the tanners and brokers who supply the shoe manufacturers who have orders for the United States army are having difficulty in filling the orders.

ALL shipments of coal into Canada from American lake ports were ordered stopped by Fuel Administrator Garfield, to divert coal from these ports to meet fuel shortage in the Northwest. The order also directs that producers shall fulfill contracts for delivery of coal to Lake Erie ports for trans-shipment, directs all handling agencies to expedite shipments and forbids the reconsignment of such coal to any points either in the United States or Canada other than the Northwest. Dr. Garfield thus brought to an abrupt end a situation that for weeks has been drawing bitter protests from the northwestern states. The coal shortage there is acute and will become far worse unless the supply flows steadily from now until lake navigation closes about two months hence.

GOVERNOR NEVILLE, of Nebraska, has been appointed colonel of the new Seventh regiment, Nebraska National Guard Reserve, now in process of formation, and has stated that he will resign as governor as soon as the regiment is called for service. The appointment was made by Acting Governor Howard, during the governor's absence at Washington. In accepting the appointment as colonel, Governor Neville said he would serve, feeling it to be no less than his duty to do as he has been urging others to do in the nation's defense. Governor Neville, who is thirty-three years old and the youngest governor in the United States, has had six years' schooling at St. John's Military School at Annapolis, having graduated therefrom in 1905. While at this school he was recognized as a captain in the school regiment. He is known as one of the best rifle and shotgun shooters in Nebraska and has won a number of trophies at state shooting tournaments.

DIRECTION of the campaign to raise a war camp community recreation fund of $3 for every soldier and sailor has been undertaken by John N. Willys, automobile manufacturer, of Toledo, Ohio, who will have associated with him men of national prominence in nearly every city of the country. In announcing Mr. Willys' appointment the commission on training camp activities of the war and navy departments made public a letter from President Wilson expressing appreciation of his willingness to serve and wishing the work every success. The fund will be used to provide hospitality and wholesome recreation for the enlisted men in communities adjacent to training camps. Six or eight weeks will be devoted to the campaign and leaders in the movement hope to have the fund oversubscribed in that time.

THE necessity of encouraging the farmers to raise three times as many hogs this year as they did last year was emphasized by Herbert Hoover in addressing a food supply conference composed of members of the Pennsylvania committee on public safety and others interested in the food problems. "We are sending abroad more hog products at the present time than we produce," he asserted. As the war grows older the necessity for self-denial will be more severe and more difficult, Mr. Hoover said; but he did not believe that the country would come to food cards and tickets. "Our sense of right," he declared, "will enable us to conserve to such an extent as to enable us to avoid such drastic resources."

The Instant Summons

"Instant, through copse and heath, arose
Bonnets and spears and bended bows;
* * * * *
As if the yawning hill to heaven
A subterranean host had given."

The whistled summons of Roderick Dhu, the hero of Scott's "Lady of the Lake," caused his Highland warriors literally to spring from the earth. Ere the echo died away, from behind bush and rock emerged the loyal and ready clansmen. In armed silence they awaited their chieftain's bidding and typified his might.

Today the Commander-in-Chief of our nation's armed forces and the resources behind them, can, by lifting the telephone receiver, instantaneously set in motion all the vast machinery of warfare, munitions, transportation and food conservation.

Like the Scottish mountaineers, the American people must stand in loyal readiness to perform any service in furtherance of the nation's high aim. Such a spirit of co-operation and sacrificing of individual interests can alone make certain the accomplishment of the great task to which our country is committed.

One Policy *One System* *Universal Service*

Organization is necessary in the local community. The farmers' club can very well be the starting point in such an organization. It will develop the coöperative spirit through acquaintanceship and a greater unity in thought and purpose. It has been found best to let the farmers' club be an educational and social organization. Then let the members who are interested in the same thing get together and form a business organization. The farmers' club can often secure entertainments, as well as speakers versed in farming, medicine, law, finances, etc., to address them, thus bringing information that the individual farmers could not secure. There is another source of information that the individual farmer does not always use and that is the information and experience developed by the different farmers in the community. In the farmers' club this information can become the common property of all. There are so many advantages to be derived from the farmers' club that there should be one in every farm community.

Since farm machinery has advanced so much in price the matter of looking after implements during the stormy season this winter is of more than usual importance. Wherever it is possible arrangements should be made to house implements. Before the implements and tools are put away they should be oiled and the bolts tightened. A good coat of paint will also help. Use bridge paint for the metal parts of machinery.

Reports Show a Good Harvest.

Threshing Now Completed in Many Counties and All Reports on Small Grain Yields Are Very Optimistic.

WISCONSIN.

Buffalo County.—Threshing is well under way and the returns are good, both in quality and quantity. Corn is badly damaged by early frost. Not more than one-half a crop is expected, and that of inferior quality. Those who have silos have saved a part of the crop for ensilage. Early potatoes are good, but the late ones did not mature on account of the frost. Beans and garden truck were also badly injured by frost.—James G. Bates.

Calumet County.—There is not much threshing completed in our locality yet, but the yield of oats, barley, rye and wheat is about the same as last year. There is plenty of corn for ensilage and the silos are nearly all filled, but there is no corn ripe. There is only one farmer in our locality whose corn was not hurt by the frost. The potato crop is about 50 per cent more than last year and for the last few years. There is a lot of second crop clover and also a lot of clover seed. There are a lot of apples this year. The garden stuff is nearly all frozen, but we got some through by covering it up every night. Grapes are ripe and are plentiful in our locality and very good.—Joseph Buchinger.

Crawford County.—Threshing is all finished in this locality. Grain of all kinds turned out well, far ahead of the last two years in yield and quality. About 90 per cent of the corn crop is out of danger of frosts and the other will be in a week. We did not have any frost in this section, but farther back from the river frost did considerable damage. It would be hard to place any average yield on the potato crop, as few have been dug, but by all appearances they should turn out well, also of good quality.—H. H. Stuckey.

Douglas County.—Small grains are yielding well in this community. Wheat will go all the way from twenty to thirty bushels of a good quality, oats from forty to fifty bushels and barley from thirty to thirty-five. There will be no mature corn in this section of the county, as we have had several killing frosts. Potatoes are a good crop and are above the average for the last five years by 25 per cent. They are yielding from 100 to 200 bushels per acre, according to conditions of soil and care.—B. N. Stone.

Dunn County.—Harvesting is completed. Silos are being filled. A killing frost cut off corn prospects and the supply of ripe corn is small, although this section did better on corn than most places in the north half of the state. Potatoes are a fair crop. Buckwheat is fair. Garden stuff is fairly good. Cattle are in reasonably good condition. Milk cows are showing a decrease in milk. Hogs are few but good here, although fat hogs will be few. Weather has been quite warm since the frost. Some rye has been sown around here.—Jas. A. Smith.

Florence County.—Threshing is completed now and oats averaged thirty bushels to the acre, barley twenty-five bushels. Spring wheat averaged ten bushels to the acre. The potato crop is less than last season. Corn is an entire failure.—Phill Kelmes.

Iowa County.—The small grain yield for 1917 was good. Sixty bushels of oats per acre has been reported from many fields, with some above that. On an average I think fifty bushels to the acre a very safe estimate. Barley, wheat and all other grains turned out better than an average yield. Corn is about the same as last year, but below the ten-year average by many points. A great many fields will not yield a bushel of corn fit for the crib. Potatoes are far ahead of last year and a good average yield. Pastures are very poor, with rough feed none too plentiful.—Art G. Hoskins.

Juneau County.—Threshing about two-thirds finished. The quality of the grain is good. Some winter wheat yielded as high as fifty bushels per acre, thirty bushels being about the average. Oats yielded forty to seventy-five bushels and barley twenty-five to fifty. A hard frost on the 9th and 10th of September killed corn and buckwheat. Potatoes are now mature, but not enough dug to give an estimate as to yield.—C. W. Hale.

Marquette County.—Corn in some places is badly hurt by frost, while others are green. Some corn is dented, but there will be lots of soft corn this fall. Some have started to fill their silos and more will start soon. Potatoes are a very good crop. No one has started to dig late potatoes yet. Beans are very poor around here. Some clover has been cut for seed, but most of it is too green and some have cut it for hay. Part of the rye is sown, but the rest will be late and will be sown on bean, corn and potato ground. More acres will be sown this fall. Stock of all kinds is very high—hogs $16 to $18 per hundred, lambs $15, sheep $6 to $9. Rye is $1.85 per bushel, bran $2 and shorts $2.50.—J. M. Williams.

Portage County.—Threshing in this section is about all finished and all grains averaged well. Oats were cut down in quality some by the hot winds, but yielded about thirty-five bushels per acre. Rye was good quality and very heavy, averaging about twenty bushels. Corn all froze the latter part of September and now about 98 per cent of it is in silos. It had just started to dent when it froze and so will make fairly good silage. Very little corn is raised for finishing, but most silos were filled. The potato yield is about 80 per cent better than last year and about 20 per cent below the average for the last five years.—Arthur W. Peterson.

Polk County.—The weather continues very dry and mostly cool. Very little plowing has been done. Some second crop clover has been harvested—about a ton per acre. Threshing is going on now. Oats are yielding from forty to sixty bushels per acre, extra quality; wheat fifteen to twenty-five bushels, not so good; barley around forty bushels, very good; rye thirty to forty, good. Corn all froze September 10th. Very little is fit for seed. A great deal has been put into silos, but it was mostly too green for first-class silage. Potatoes are being dug. Early Ohios are very good, Rurals and Green Mountains fair, Burbanks not so good. The first three named yielded 150 to 200 bushels per acre. Late planted potatoes are poor because of dry weather. Dairy men are feeding very little grain—too high priced. Pastures are poor. There will be an abundance of rough feed. Good hay is selling for $15 a ton loose. Gardens are mostly good. Root crops are not so good, because of dry weather.—P. F. Amery.

Price County.—Oats threshed out thirty-five to forty-five bushels per acre and the quality is good. Potatoes go from 100 to 150 bushels per acre and good quality. Corn was almost all killed by frost before maturity. It has already been put into silos or shocked in the fields.—C. F. Glissendorf.

Shawano County.—Most of the corn has been harvested into the silos. Some has been and is being cut for fodder. Not to exceed 15 per cent of the corn will ripen, owing to the early frost, but the corn has produced a great quantity of silage. Hay has been more than a normal crop; the same is true of barley, rye and wheat. Oats are about 80 per cent crop. Potatoes will exceed anything we have had here for years, both in quantity and quality. Live stock looks fine, but owing to the want of corn for feed much of it will be disposed of. Little feeding operations will be carried on in this neighborhood.—M. J. Wallrich.

Washington County.—Grain threshing is just completed and all small grains yielded better than for a number of years past. I think thirty-five bushels per acre would be a good average yield for winter wheat, from sixty to sixty-five for oats. The best rye would average forty bushels per acre and barley about thirty-five bushels. The quality of all grain is very good. Corn in this locality is all off this season. The fodder is very short and none of the corn will mature enough for husking. Frost has done but little damage in this section so far. The potato yield will be twice as great, or very nearly so, this year than last. Red clover for seed is just being harvested and I think it will yield about the same as former years. The apple yield here is smaller this year than last.—M. P. Salter.

Waukesha County.—Threshing is well along and the yield is good, also the quality of the grain. Corn is not matured, but will make good ensilage. The frost only touched the lowlands. The potato crop is much better than last year, but is not better than an average if as good. Some fields are very thin and yield light, while in patches they are good and yield heavy. The new seeding is very good. Alfalfa is the best we ever had in this county. I know a field of Grimm with fifteen pounds sown to the acre that is about as thick as could stand and was twelve inches high when the barley was cut off the field.—W. J. Mann.

Wood County.—All small grains threshed were of good quality and better as to quantity than last year or for the last five years. Oats averaged about thirty bushels per acre and rye about fifteen bushels. There were only a couple of fields of wheat in this section and they yielded about twenty bushels per acre. The corn is all going into silos, as the heavy frost in September killed it for ripening. I have seen none in this locality that will harden enough to make corn for anything more than feeding hogs. Potatoes will make a good crop, making better than they have for a number of years.—Fred E. Weber.

Manitowoc Association.

To the Editor:—The Manitowoc County Cow-Testing Association reports 425 cows tested during the thirty days ending September 15th. Fifty-seven of these produced over forty pounds of butter fat. John Pinter is owner of the highest producing cow, which yielded 1,281 pounds milk, testing 4.8 per cent making 61.5 pounds butter fat. M. G. Laughlin has the highest producing herd. His ten grade Holsteins produced an average of 42.53 pounds of butter fat. The forty-five-pound list for the thirty-day period ending September 15th is as follows:

Owner, name and breed.	Age.	When fresh.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
M. Loughlin

In Calumet County.

To the Editor:—The high herd for August, owned by H. J. Duecker, consisting of twenty-two Guernsey cows, averaged 808 pounds of milk and 38.7 pounds of butter fat. Four hundred and three cows were tested in this association during August. The highest producing cow for the month is also owned by H. J. Duecker. She is a grade Guernsey and produced in one month 1,492.3 pounds of milk and 61.1 pounds of butter fat. Twenty-eight cows produced forty or more pounds of fat and five more than fifty pounds. Our forty-five-pound list for August is as follows:

Owner, name and breed.	Age.	When fresh.	Lbs. milk.	P.C. fat.	Lbs. b'fat.

Orion Cherry Col.

RUNDE BROS., Cuba City, Wis., are recent additions to the Duroc Jersey ranks of Wisconsin and they such have a good start. In the first place they bought a "real" boar to head their herd—a son of Walt's Top Col., out of an Orion Cherry King dam. They have named him Orion Cherry Col. He is a fall boar—a year old this fall and is one with extreme size, wonderful thickness the best of bone and feet and a rainbow back. They have a nice lot of fall pigs sired by him and they are for sale. They also have some good spring gilts for sale. Keep this boar in mind, for we believe he is a "comer." Note the advertisement that will appear in The Wisconsin Farmer each issue and if you are interested in the purchase of Wisconsin's good boars, write the above firm. See page 31.—

FARMERS' MARKET

WANTED — FOR SALE — TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may have live stock, poultry and eggs or machinery for sale. You may want to sell or buy a farm. Write your copy for the advertisement. The rate is six cents per word, each insertion.

The Wisconsin Farmer, Madison, Wis.

FARM LANDS.

FOR SALE—Jackson county, Wisconsin, 225-acre farm, 203 acres cultivated, balance farm watered, pasture extra good, clay soil, fine 9-room house, large basement, barn, large granary, garage, other buildings, school 40 rods, 2 miles Hixton, main state road, old settled country, all improved. Price $100 per acre. Address owner, H. E. Burton, Hixton, Wis.

HARDWOOD cut-over land, silt loam, clay subsoil. Not sandy or gravelly. Close to towns. Good roads. In the heart of the dairy country. You deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 9. North Western Lumber Company, Land Department, Stanley, Wis.

BLUE GRASS PASTURE FARM—260 acres, southwestern Wisconsin. Will pasture 100 head cattle, plenty water, half tillable, balance timber, 5 miles from station. Real snap. Price $50 per acre. Cash $3,000, balance terms. E. C. Amann, Prairie du Chien, Wis.

FOR SALE—160 acres 4 miles McIntosh, S. D., near school; under fence; garden and hog pasture fenced. 85 acres cultivated, more can be. Running water; fair buildings; well. Plenty feed. Terms. Write Lock Box 125, McIntosh, S. D.

WOULD YOU SELL YOUR FARM if you got your price? Sell direct. No commissions. Particulars free. Charles Renich, G-2, Woodstock, Illinois.

FLORIDA FARM lands, two to three crops; flowing wells. Write for particulars. T. B. Stinson, Palatka, Fla.

WANT TO RENT a farm, 40 to 80 acres, around Milwaukee, Wis. Jindrich Miller, Goodrich, Wis.

KODAK FINISHING.

KODAK FINISHING—Let experts finish what your kodak began. We finish one roll (only) six exposure film, any size, furnish six select prints for 25c with order. Better pictures from each exposure. Fewer failures from each roll or money cheerfully refunded. T. V. Moreau Co., 620 Nicollet Ave., Minneapolis, Minn.

GROCERY STOCK FOR SALE.

FOR SALE—Good grocery store in a thriving industrial city, southern Wisconsin. Doing fine business, ready to retire. If interested in store or any other line of business, write and I will submit descriptions of some of my southern Wisconsin business opportunities. J. C. Genske, 255 Main St., Kenosha, Wis.

MONEY TO LOAN.

MONEY TO LOAN on Wisconsin farms in amounts of $5,000 to $25,000. Security must be twice the amount of the mortgage. 6% with privilege of paying $100 or more at any time. Address 206 Washington Bldg., Madison, Wisconsin.

LEARN TELEGRAPHY.

TELEGRAPH OPERATORS IN DEMAND—One superintendent writes: "Can use 25 operators tomorrow." Ladies or gentlemen. Wisconsin School of Telegraphy, Oshkosh, Wis.

HUNDREDS OF YOUNG MEN and young ladies are needed as telegraph operators, stenographers and bookkeepers. Write for catalog. Barry's Telegraph Institute, Minneapolis, Minn.

LEARN TELEGRAPHY—Positions guaranteed. Young men and women. Write Northwestern Telegraph School, Eau Claire, Wisconsin.

BREEDING EWES.

BREEDING EWES FOR SALE—Now is the time to buy before they go higher. Wool and sheep are going to be higher in price and stay high. John Blanchard, Columbus, Wisconsin.

LIGHTNING RODS.

LIGHTNING RODS that are guaranteed protection. $250.00 to find a building burned by lightning with our rods. L. F. Diddie Co., Marshfield, Wis.

LEGHORN HENS.

FOR SALE—Will sell all or part of 200 White Leghorn hens; yearling stock; many of them fit for show room. Oak Dale Farms, Austin, Minn.

DUROC PIGS.

DUROC PIGS—Gilts and boars. Regulator breeding. Best bunch of pigs I ever raised. Farmers' prices. Arthur Popp, Jefferson, Wis.

WHITE ROCK COCKERELS.

FOR SALE—White Rock cockerels. Fishel strain. 5 to 7 pounds. $3 to $5 if taken now. Erwin Eckert, Markesan, Wis.

REGISTERED JERSEY BULLS.

FOR SALE—Two young registered Jersey bulls. Strong, thrifty fellows. J. A. Martin, Lancaster, Wisconsin.

HOUNDS AND SPANIELS.

HOUNDS and water spaniel pups, 9 months old. Cheap. Schneider, Lebanon, Wis.

NEW FOUNDLAND DOGS.

PURE-BRED NEWFOUNDLAND PUPS for sale. Henry S. Lanzkamp, R. 3, Potosi, Wis.

Sun Prairie Girl State Champion

High School at Sun Prairie, Dane County, Wins State Championship at Junior Fair for Third Time.

FANNIE STIMSON, CHAMPION GIRL WISCONSIN STATE FAIR.

F. J. HOLT, PRINCIPAL SUN PRAIRIE HIGH SCHOOL.

AT THE 1915 and 1916 Wisconsin State Fairs the little village of Sun Prairie, Dane county, was brought into prominence by reason of the fact that her high school carried off state championship honors. It was considered quite a record for the same school to take such honors two years in succession, and many people interested in education and agriculture expressed the wonder that more high schools in Wisconsin did not offer Sun Prairie closer competition. At the state fair this year there was a general desire on the part of visitors to see the Sun Prairie high school agricultural exhibit. The exhibit was there, and it was a splendid one. A picture of the agricultural booth and some facts regarding the club contests have previously been published in The Wisconsin Farmer. But the "Junior Fair" of 1917 was much more interesting than those of former years because other high schools came in to compete with Sun Prairie in almost every classification on the premium list. Notwithstanding this added interest in the work and the increased number of exhibits Sun Prairie in 1917 won the championship for the third successive year. In addition to this, Miss Fannie Stimson, a pupil at the Sun Prairie high school, was awarded state championship in girls' work. At the time this was written the state champion boy had not been decided, owing to the close competition. Frank Bihlmayer and Walter Rake, both of the Sun Prairie school, stood very high in the number of winnings, and Frank Bihlmayer is one of the three high-school boys of the state still being considered for champion boy at the 1917 state fair. Miss Stimson was captain of the Sun Prairie high school girls' team, which included her sister, Helen, and Adaline Krugman. This team won first place in canning, first in sewing and first in baking, and, in addition, second in public demonstration work. Each of these girls, in turn, won many individual prizes and Miss Stimson, being the largest individual winner, was able to carry off the state prize. The Sun Prairie high school boys and girls are hoping that one of their boys will yet be named state champion boy, and if this should happen Sun Prairie high school would clean up all the honors with championship school, championship girl and championship boy.

Sun Prairie exhibited the grand champion dairy bull and calf shown at the state fair by Emmet Howe, and, although no prize was given, the judges in conversation made the statement that this animal was the best individual calf among all the sixty which were exhibited. Sun Prairie exhibited at the state fair eight calves, fourteen pigs and 150 chickens. For the eight calves shown eight ribbons were awarded; the fourteen pigs won ten ribbons, while in the poultry department one-half of all the prizes awarded went to Sun Prairie high school. The Sun Prairie high school record in club work shows first in baking, first in canning, first in poultry, second in pigs, second in corn, second in fruit, second in garden, third in potatoes and fifth in calves.

In the judging work of sheep the boys won third, fourth and fifth places in competition with sixty-five boys, while in dairy cattle Walter Renk was awarded second place and in beef cattle Russell Twiton third place; in fruit judging Sun Prairie boys won third, fourth and fifth places. The grand prize from the Shropshire Association of Wisconsin may be awarded to Walter Renk, having won first on reason and when the decision is given it is expected that this boy may be the winner of the special $100 membership. During the past two years Mr. L. Schreiber, F. Carlson and A. Williams have had charge of some of the class work in agriculture, while Mr. F. J. Holt, principal of the institution, has done the field and extension work and organization of rural communities and state fair projects.

Sun Prairie high school has the hearty coöperation of all the people in what is known as the Greater Sun Prairie Community, a section covering eight miles in all directions with Sun Prairie as the hub. The Sun Prairie school sends its teachers and pupils to various rural schools and organizations for practical demonstration. As a result the number of pupils entered in agricultural work at the Sun Prairie high school has increased in two years from 65 to over 100. In 1915 six boys went to the state fair with the Sun Prairie high school exhibit. In 1916 the number was increased to thirty-three boys and girls. In 1917 forty boys and girls from the Sun Prairie school camped on the Wisconsin State Fair grounds and took part in the various contests. Mr. F. J. Holt, principal of the school, and his teaching staff and patrons believe in extension work of all sorts and instead of waiting for the boys to come to school, takes the school to the boys, and thus interests them in educational work so that their desire is to get more and they come to secure all the information which books can afford, and which practical work in the school can give. During the past year the boys have constructed and operated a new greenhouse, made seed beds, cold frames, pigs and poultry colony houses, conducted mock auctions, built silos and the like, and the work will continue along these practical lines.

The farming communities have taken up the work of growing better corn and standard varieties of potatoes, due in great part to the interest aroused in the boys and girls by their attendance in school.

The winnings of this school this year were greater than at the fair of 1916 in number of premiums won, but the total amount of cash is slightly less, due to the fact that the premiums were reduced in amount, and no grand champion premium was awarded.

During the year speakers were secured from the University of Wisconsin and other sources, who met with the people of the Greater Sun Prairie Community and instructed them in growing and judging various kinds of grains and vegetables. This resulted in closer coöperation of school and community. The agricultural work is combined with manual training in every way possible, and the boys learn the use of the tools for farm work, and will construct many useful farm implements, such as non-sagging gates, wagon boxes, watering troughs, etc.

Every boy and girl, even though they are in agricultural work, must also take work in science, English, history and mathematics, so that the education is not all one-sided, but is many-sided, and tends to make a broader-minded individual of every person completing the course.

Cleveland Tractor
Geared to the Ground

Now—More Than Ever—You Need Fast Work—Highest Efficiency

Horses are scarce—labor scarcer.

Yet America expects you to produce a bigger yield than ever.

Only faster work and higher efficiency will do it.

You need the Cleveland Tractor. Up-to-date farmers in all sections of the country are finding it just the fast-working, economical implement they must have.

The Cleveland plows—and plows beautifully—at 3½ to 4 miles an hour. *Think of it.* Such speed used to be considered out of the question.

It actually means doing the work of three good 3-horse teams and 3 men in the same time—*and at a greater saving in actual money.*

Eight to ten acres a day! And every foot plowed better than you can do it with horses and men!

Hauling only two plows the Cleveland is not only easier to handle than the heavier three-plow machines, but works much quicker and covers more ground.

This same speed so useful in plowing can also be applied to harrowing, harvesting, hauling the manure spreader or any of the many hauling jobs you have. The Cleveland gives you 12 horsepower at the drawbar—plenty for all your work.

Because it travels on its own tracks the Cleveland can go anywhere—up or down hill, across ditches, through loose sand, gravel or thick mud.

The Cleveland is the first general purpose tractor. It is the invention of Rollin H. White, the famous motor truck engineer. Every part is selected for strength and long wear. Gears are identical with those found in the finest trucks. All are protected by dustproof cases.

The Cleveland gives you 20 horsepower at the pulley belt—ample power for cutting ensilage, sawing, pumping, running the binder head, or any stationary engine farm work.

It is small (only 52 inches high) and light (weight 2750 pounds). So you can get unusual economy.

And here's another very important advantage. *The Cleveland steers by the power of its engine.* Just a light touch on the wheel and it goes in the desired direction. It will turn in less than a 12-foot circle.

We are flooded with orders for the Cleveland Tractor and cannot promise immediate deliveries. We advise ordering now for delivery in the spring.

Write now for complete information and the name of the nearest Cleveland dealer. Address Dept. B-Z, or use the coupon.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Gears Rattle.

I have a Saxon roadster, the engine of which has never given me any trouble; but it does have a rattle or clicking noise in the timing gears. If I hold the shaft going to the Atwater-Kent distributor, the noise ceases at once. Can you tell me what to do to remedy it?

Answer.—Your gears have lost motion between the teeth, due either to the teeth being worn or the bearings of the gear shafts worn. The trouble is not serious excepting for the noise. The first thing to do is to replace the worn bearings. If this does not tighten the gears sufficiently it will be necessary to use new gears to quiet the motor.

Engine Overheats.

I am writing to you about my Ford engine. The carbon has been removed from the cylinders and the radiator has been cleaned, but it boils the water when I only run a minute. The garage man here does not seem to know what is wrong. It is in good running order except that it boils the water.

Answer.—First, see that the fan belt is tight and that the fan is in good working order, the bearings being well oiled. A loose fan belt is one of the most common causes of overheating. Keep the radiator full. See that the motor has plenty of oil, keeping the oil level between the two pet cocks on the flywheel casing. Too high an oil level will cause carbon trouble, and carbon will cause overheating. Too rich a gas mixture will have the same result. Make sure that the transmission bands are not adjusted tight enough to drag.

Lining Up the Front Wheels of an Auto.

How can I tell when the front wheels of my auto are in alignment?

Answer.—Figure 1 shows a pair of front wheels removed from the frame of the car. WW are the wheels, A the

FIGURE 1.

axle, C the rod connecting the steering arms and G a gauge or tram to measure the distance between wheels. If the axle has been removed from the frame as shown in the figure a straight rod would be all that is necessary. When the axle is under the car, a U-shaped tram like the one shown is necessary, as it is impossible to run a

FIGURE 2.

rod straight across. The tram may be made of light boards nailed together as shown; or it may be made from an iron rod bent so as to clear the frame of the car. The distance between the rims of the wheels should be the same at front and rear. Some authorities prefer to make the distance in front about half an inch less than at the back, the object being to allow for the spring of the parts when the car is running.

Figure 2 shows a front view of the axle. The wheels should be inclined as shown, the distance A being equal to the distance B. For perfect steering the line CL through the center of the king bolt should pass through the center of the tire at the ground. Few cars are made so that this is possible. Referring again to Figure 1, if the wheels are too far apart at the front, lengthen the connecting rod C.

Engine Knocks at High Speed.

What causes my 1914 Ford engine to heat severely even on short drives? I keep plenty of oil and water in it, and run with the spark well advanced. When driving at over twenty-five miles per hour, there is a severe cracking noise somewhere on the car as if something were striking against a piece of iron. When the engine slows down, this stops. Can I run electric lights from the magneto? I have prest-o-lites at present, but would get electric lights if I could use them.

Answer.—Your first question is answered under the heading "Engine Overheats." The Ford Engine, owing to its high compression, is liable to heat if any of the conditions referred to are not right. We were told by one owner that he had arranged his car so as to drop a few drops of water into the intake manifold whenever his car began to heat or pound from carbon. He claimed good results. With the poor fuel now on the market this might be a good plan.

The cracking noise is probably due to some rotating part hitting the side of the case, the most likely cause being a cam hitting the crank case side. At medium loads it would not hit, but at heavy loads the shaft might spring enough so that the cam would hit. In an old type motor having an aluminum crank case the writer has observed a crankshaft hit an oil pipe when the motor was under heavy load that the shaft cleared by three-sixteenths of an inch when running idle. There is not so much spring in the modern motor with the cylinders and crank case cast en bloc. The first thing to do is to locate the part that is producing the noise. This can usually be done by holding a sounding stick against various parts of the car while the engine is running under load, one end of the stick being held against the ear. The stick should be made of wood, about two feet long and the size of a lead pencil. The engine can be loaded by letting the clutch partly in with the brake on. The engine should not be run in this manner except for very short intervals, as the clutch might be injured. The inside of the case where the part is hitting will show a bright spot.

Ford cars made after December, 1914, have large magnets and may be safely used with electric headlights. Cars made previous to this date are sometimes equipped with electric lights run from the magneto, but the

Doing your chores after dark is when you need the American Dark Chaser. It gives 400 candle power light. Burns for less than half-cent an hour. When hung on a post, it lights the entire milking or feeding pen.

The American Dark Chaser is the dependable lantern for all times and all places. It is an economical necessity wherever a lantern is used. Absolutely safe. Can be taken any place you want a light. Wind cannot blow it out.

Ask your dealer to show you the American Dark Chaser or write for large circular that tells all about it.

LOW COST of OPERATION

THE steady price increase and scarcity of gasoline have demanded economy in farm power fuel.

The foremost feature back of this new farm engine is its proven economy. Constructed throughout for the perfect combustion of kerosene and fuel oils, it operates at a clear saving of *four-fifths* of the fuel cost—a saving so ample as to be a conclusive recommendation in itself.

However, other features of unusual merit have combined to make the

Starts and Runs on Kerosene, Fuel Oil or any Oil that Flows

EVINRUDE OIL ENGINE

(unconditionally guaranteed)

the final word in economical, simple and efficient farm power.

The usual maze of mechanism is lacking—no carburetor or mixing valve to become disarranged—no timer to get out of adjustment. Neither has it batteries, magneto, wiring, coils, spark plug or switches to provide the usual annoyance of faulty ignition.

An old principle—that high compression produces extreme heat—is employed for ignition. The fuel is introduced directly into the cylinder and never fails to ignite.

Starts and runs on kerosene, fuel oil or any oil that flows, even in the coldest weather. An engine of final simplicity, inherently smooth and pliant action, and capable of the heavy strains and grief of farm power demands, is placed within your reach.

We are sure you will be interested; at least allow us to send you a catalog.

GOOD MEN WANTED TO LEARN THE AUTO BUSINESS

Any ambitious, capable young man can make a success for himself, and if you will only prepare yourself, you will get work, because positions are open, waiting for competent men to do Auto and Electrical work.

The American Auto College develops your talent for a splendid, big paying trade. Our course has been enlarged with lots of new work—principles of Knight Motors, 8 and 12-cylinder Engines of new models, Tractors, new Starting Systems, Magnetos, Wiring, Coils, Welding, Brazing, Lathe work, Milling and Drill work, Tool making, Overhauling and Repairing, and all the newest, up-to-date Auto equipment.

AUTO College

$900 TO $3,000 SALARY OR BUSINESS PROFITS PER YEAR

Positions Are Open
Tinker, repair men are left out as fast as good men are found to take their places. Garage men, letters and telegrams come to us asking for good men. Just prepare yourself and your future and success will be started. Think of the good time, and the money you can make.

LIFETIME OPPORTUNITY—It's up to you to be either a common, hard-working laborer or else learn a good business. Thousands of men will go into the Auto business within the next year. Be one of them. We want you to. Get started right away. Learn here where the opportunities are greatest and best, by our system of actual work in our large shops. No books used; we furnish tools. You do the work yourself. Our men learn easily and quickly because practical work is the best.

Big Electric Starter and Tractor course FREE with the regular Auto course. Write for our big FREE Catalog now

Lights With a Match

The Coleman "Quick Lite" Lantern makes and burns its own gas from common gasoline. Gives brilliant light of 300 Candle Power. Just use a match to light. No torch required. No wick. No dirt. Storm and wind proof. Absolutely Safe. Can't explode—no danger even if tipped over. Guaranteed Five Years. See your dealer or write THE COLEMAN LAMP CO. Wichita. St. Paul. Toledo. Dallas. Chicago.

Ford Company does not approve of this.

Installing Magneto.

We have a six-horse-power Dempster stationary gas engine. It uses a make-and-break ignition system. I wish to put a magneto on it. Could this be accomplished successfully without disturbing the system now on the motor? Would not a low tension magneto serve the purpose? Would the magneto have to be insulated from its seat on the engine? Which drive would be the more practical, friction pulley, chain or gears? Would a make-and-break system spark at the right time for the magneto?

Answer.—It would be possible to install such a system. If you wish to avoid running on battery the easiest thing for you to do is to buy a low-tension magneto having a friction drive pulley, and run it from the flywheel. This will allow you to leave your present system just as it is. Connect your battery to the two poles at one end of a double throw switch. Connect the magneto to the other end terminals. Connect the middle terminals to the engine. Then you can start on battery and switch to magneto as soon as the engine speeds up. You could install a jump-spark system, replacing your igniter by a casting tapped out for a spark plug. You would then use a friction-driven, low-ttnsion magneto and a jump-spark coil having a vibrator. You would receive a wiring diagram with the magnete. You would find it difficult and expensive to install a high-tension magneto. The magneto would not have to be insulated from the engine.

Tightening a Ford Steering Gear.

How would you tighten a Ford steering gear that is loose? What causes Ford motors to get excessive fuel and oil supply in the front cylinder? Is this common to all Ford motors?

Answer.—Ford motors have the main oil supply pipe emptying out in the crank case at the front end. For this reason the motor is liable to get more oil in number one cylinder. There is no reason why this cylinder should receive more fuel than the others. The Ford Manual gives the following method of tightening the Ford steering gear:

Should the steering gear become loose, that is, so that a slight movement of the wheel does not produce immediate results, it may be tightened in the following manner: Disconnect the two halves of the ball sockets which surround the ball arm at the lower end of the steering post and file off the surface until they fit snugly around the ball. If the ball is badly worn, it is best to replace it with a new one. Also tighten the ball caps at the other end of the steering gear connecting rod in the same manner. If the bolts in the steering spindle arms appear to be loose, the brass bushings should be replaced with new ones. Excessive play in the front axle may be detected by grasping one of the front wheels by the spokes, and jerking the front wheels back and forth. After the car has been in service two or three years excessive play in the steering gear may make necessary the renewal of the little pinions, as well as the brass internal gear just underneath the steering wheel spider.

Law Questions.

Trespass by Cattle—Damages.

A Subscriber, Sheldon, Wis.—At the annual town meeting in our town, the people voted by acclamation to allow cattle to run at large, and that the owners thereof should not be liable for damages. They called a custom law. (1) Has such law any force or effect? (2) I keep my field fenced and my cattle fenced. Recently cattle which were at large broke into my field and did considerable damage. What steps can I take to compel my neighbors to keep their cattle off my place?

Answer.—(1) Such law has no force or effect. The voters at an annual town meeting have no legal power to exempt owners of cattle from liability for damages on account of trespass by their cattle. (2) If the fence about your field was a lawful fence you can sue the owner of the cattle for damages and recover whatever amount you can prove at the trial.

Levy of Highway Taxes.

Mr. Isaac F. Bradley, Lindsey, Wis.—Under the laws of Wisconsin, does the town board have the right to levy a tax of 1 mill in one district, 2 mills in another, and seven mills in a third district in a town, for repairing a road which was in bad condition? This road is fifteen miles from property which has the 7-mill tax, and inaccessible and never used by owner of said property. Can the town be compelled to refund the tax, and if so, what would be the method of procedure?

Answer.—The law of Wisconsin authorizes a town board of supervisors to levy a road tax of not less than 1 mill nor more than 7 mills on the dollar on the valuation of real and personal property in each superintendent district in the town. The board has the right to decide what the levy shall be in each district. The town cannot be compelled to refund taxes paid under such levies. The authority of the town board to so levy taxes is found in section 1239, Wisconsin statutes, 1915.

Law Helps Rid State of Many Scrub Sires.

To the Editor:—Twenty states, in addition to Wisconsin, which set the example in 1906, now have stallion enrollment laws.

New York enacted its stallion law since Wisconsin's last report was published. The other states having such laws are: California, Colorado, Idaho, Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Montana, Nebraska, New Jersey, North Dakota, Oklahoma, Oregon, Pennsylvania, South Dakota, Utah and Washington.

By act of the legislature enrollment was on July 1, 1917, transferred to the state department of agriculture. Dr. A. S. Alexander remains in charge, with offices at the college of agriculture, Madison.

The effect of the stallion enrollment law in each state invariably has been to lessen unsound and grade and scrub stallions; to increase the numbers, quality and soundness of pure-bred sires; to discourage dishonesty in the registration and advertising of stallions, and make the use of pure-bred brood mares more general.

In Wisconsin the horse-breeding industry has been somewhat depressed during the past season, the consequence being that the total of 3,062 public service stallions in 1916 has fallen off 258 head. The horses of the state, however, have increased 3,000 head to a total on January 1, 1917, of 715,000 valued at $85,000,000.

Progress in the elimination of grade and scrub stallions has been satisfactory. Only eighty-five new grade and forty-eight scrub stallions were enrolled during the season, while 105 grade and fifty-seven scrub stallions were retired. Scrub stallions now number 260 compared with 673 in 1911.

Pure-bred stallions are gradually driving out grade and scrub stallions in Wisconsin. The percentage of pure-bred stallions now is 61.5 compared with 59.2 in 1916 and thirty-five in 1907. In twenty counties the percentage of pure-bred stallions now is over seventy and a material increase of pure-bred stallions has taken place from 1907 to 1917 in sixty counties out of the seventy-one counties of the state.

There is now in the state one stallion to 255 horses; one pure-bred stallion to 415 horses; one grade or scrub stallion to 661 horses; one pure-bred draft stallion to 502 horses, and one pure-bred light breed stallion to 2,535 horses. The pure-bred stallions of the state now number 1,723, grades 817 and scrubs 260.

An active campaign has been carried on during the year for the improvement of stallion advertising and more generally and conspicuously than ever before sires have been labeled "pure bred," "grade," or "mongrel or scrub" for the information of owners of mares. The inevitable result of such advertising and the spread of education will be the final elimination of all grade and scrub sires.

The pure-bred draft stallions of Wisconsin now include 1,089 Percherons, 162 Belgians, 71 Clydesdale, 61 French Draft and 40 Shires. Of the light breeds 221 are standard-bred trotters and pacers, 17 Morgan, 15 French Coach, 11 German Coach, 6 Hackneys, 3 Shetland, 4 Arabian, 4 saddle and 1 Welsh. There are also eighteen registered jacks. A complete register of stallions in service in the state on July 1st appears in Bulletin 283, a copy of which any resident of the state may secure while the edition lasts by writing to the college of agriculture or state department of agriculture, Madison.

Dr. A. S. Alexander.

Lower rates and a revision of tariff rules for the transportation of live stock on virtually all the railroads have recently been requested in a complaint filed before the Interstate Commerce Commission by the Texas National Live Stock Exchange, an allied organization. The complaint asserts that present tariffs and classifications are unjust and unreasonable. Every large stock shipper and receiver in the United States is represented in this complaint.

Do You Get 14,000 Miles from Tires?

MR. R. RAMSDELL, Cincinnati agent for a prominent make of tire, has driven his Ford 14,000 miles on one set of tires and they are still in good condition. He says that this unusually high mileage is due to the

HASSLER PATENTED Shock Absorber For Ford Cars

It takes the dead weight of the car and passengers off the tires and holds it on four conical springs, one at each wheel. The unevenness of the road produces only a gentle resilient motion instead of making the car bump along with the tires bearing the impact of every jolt and jar. Every Hasslerized Ford secures enough *extra* mileage from tires to pay for the Hassler every few thousand miles. Aside from the greater comfort the Hassler will give you, the saving in tires, upkeep and gasoline makes its use a matter of economy and good business judgment.

10-Day Free Trial Offer

Write today for Free Trial Blank and we will have a set of Hasslers put on your Ford without a cent of expense to you. Try them 10 days. Then, if you are willing to do without them, they will be taken off without charge. Don't ride without Hasslers simply because someone discourages you from trying them. Accept this offer and see for yourself. Over three hundred thousand sets in use. Write today—NOW.

DAIRY

At Northern Wisconsin State Fair.

To the Editor:—Seventy head of pure-bred Jerseys from Wisconsin met in competition at the Northern Wisconsin State Fair, held at Chippewa Falls, September 21, 1917.

Prof. G. C. Humphrey, of the Wisconsin College of Agriculture, chose the prize winners. He remarked, "This is the best showing of Jerseys I have ever seen in the state. Wisconsin should be proud of such a choice lot of Jerseys." Judging day was one of the beautiful, sunshiny September days that northern Wisconsin is noted for. Jersey breeders and enthusiasts encircled the ring. Enthusiasm ran high. Many of the classes were so uniform that it was difficult to pick the winners.

All of the exhibitors had the one idea in mind: To place the Jersey cow in the foreground and to convince others that she could combine beauty and efficiency and be the most economical producer of butter fat.

W. M. Knight, of Eagle, Wisconsin, came up from the Wisconsin State Fair with fourteen head, where he had taken "his share of blues." Mr. Knight has a herd of fifty head from which it is not difficult to choose prize winners. He has typey, island-bred stock, noted for their clean-cut head, straight top lines and excellent veining and udder development. Trial Noble of Oaklands heads the herd. He

DINAH'S PRINCE OF BROOKSIDE, OWNED BY HALL ESTATE, KNAPP, WIS.

is sired by Noble Oaklands; his dam is Trials Sweetbread, that has a record of 563 pounds and five ounces of butter.

E. C. Jacobs, of Elk Mound, showed ten head. Keepsakes Golden Lad 2d, from W. H. Clark's noted herd, stands at the head of his herd. He has the large American type in mind.

E. E. Wyatt, Tomah, Wisconsin, exhibited seventeen head. He has some choice young stock sired by his herd bull, Maiden's Varsity King. Mr. Wyatt has been showing at many of the prominent county fairs throughout the state this season and spreading the good news of more and better Jerseys.

The Hall Estate, of Knapp, Wisconsin, selected ten out of their large farm herd and made a fine showing. Maitland's Noble Prince heads the herd.

Smith & Powell, of Rice Lake, Wisconsin, showed nine head of good American-type stuff.

C. T. Colby, of Thorpe, Wisconsin, has an excellent farm herd. He exhibited a number of type yearling heifers. His herd bull is King Snowball.

PRIZES AWARDED.

Bull Three Years or Over—1st Knight on Noble Fenwick; 2d Jacobs on Keepsakes Golden Lad 2d; 3d Wyatt on Maiden's Varsity King. Noble Fenwick was an outstanding imported bull. The other two were American type. Six were entered in the class.

Bull Two Years Old or Under Three—1st Knight on Trial's Noble of Oakland; 2d Smith & Powell on Mary's Beauty Bean; 3d Wyatt on Harbinger's Chief. Three in the class, Trial's Noble of Oakland being a chip off the old block.

Bull One Year and Under Two—1st Hall Estate on Dinah's Prince of Brookside; 2d Wyatt on Euphemia's Pauline Varsity; 3d Knight on Fenwick's Hollie Boy. Dinah's Prince of Brookside was a typey youngster worthy of heading a good herd. Six entries in the class.

Bull Calf—1st Knight on Trial Noble of Oakland 2d; 2d calf owned by Hall Estate; 3d calf owned by Wyatt. Seven entries.

Cow Three Years or Over—1st Knight on Combination's Golden Lady; 2d Jacobs on Bessie Beautiful; 3d Hall Estate on Honor Maid of Brookside. There were twelve animals in line and the cow had to have the merits to get the ribbon. One of the best classes shown.

Heifer Two Years and Under Three—1st Jacobs on Lakeside Jewell; 2d Knight on Oxford Queenie's Princess; 3d Hall Estate on Eureka's Jersey Fawn. Six heifers in this class made a pretty picture.

Heifer One Year and Under 2—1st Knight on Eminent's Safety Bell 2d; 2d Smith & Powell on Viola Golden Jolly; 3d Knight on Volunteer's Lottie 2d. Eighteen entries were made and sixteen were led into the ring. Surely it was a sight to stir any man. What excellent prospects for a future herd. Mr. Knight and Messrs. Smith & Powell can feel justly proud to be able to get the ribbons in such a contest.

Heifer Calf Under One Year—1st Knight on Trial's Pretty Maid; 2d Hall Estate on Princess Abbess; 3d on calf

GIRLIE OF SUNNYSLOPE, OWNED BY C. T. COLBY, THORPE, WIS.

owned by Jacobs. Thirteen entries in this class made things interesting.

Aged Herd—1st W. M. Knight; 2d E. C. Jacobs; 3d Hall Estate. Six entries made an excellent showing.

Get of Sire—1st Knight on get of Trial's Noble of Oakland; 2d Jacobs on get of Keepsake's Golden Lad 2d; 3d Hall Estate on get of Maitland's Noble Prince. Six entries. This, without a doubt, determines the value of a bull. Trial's Noble of Oakland is a bull to be justly proud of.

Champion Bull Two Years and Over—Trial's Noble of Oakland.

Champion Bull Under One Year—Dinah's Prince Brookside.

Champion Cow—Combination's Golden Lady.

Champion Heifer—Eminent's Safety Belle 2d.

F. B. Kelsey, Tomah, Wis.

Cost of Producing Milk.

To the Editor:—There is considerable discussion now concerning the winter price for whole milk in northern Illinois and southern Wisconsin, comprising what is known as the Chicago dairy district. I submit the following which may be of some interest to you or your readers:

The winter price should be governed almost wholly by the price of feed during the winter months. Therefore, no exact figures can be given out in advance. I have prepared the following figures on the cost of producing 100 pounds of milk at present feed prices. The average cow produces between 5,000 and 6,000 pounds of milk per year, which is an average of somewhere around sixteen and two-thirds pounds per day or 100 pounds per day from six cows. The feed cost per day for six cows will be about as follows:

Forty-two pounds of ground feed, $1; 100 pounds of hay, $1.25; 200 pounds of silage, 50 cents; total feed cost, $2.75. Labor cost, 60 cents; total cost of producing 100 pounds of milk, $3.35.

W. H. Deneen.
McHenry Co., Illinois.

Manual of Milk Products.

Wm. A. Stocking the Author of Instructive Volume.

According to Wm. A. Stocking, the author of the recently published work entitled "Manual of Milk Products," the annual value of dairy products in the United States is more than $600,000,000. It follows, therefore, that the handling of these products makes an industry of great commercial and economic importance. More and more dairy products are being valued because of the food nutrients which they supply rather than luxuries to be used chiefly to please the taste. In preparing his new volume, comprised of nearly 600 pages, Mr. Stocking has aimed to give practical instruction to the end that those engaged in any branch of dairying who follow his teaching will adopt ony the best practices. The book is designed to meet the needs of students as well as men in commercial work. Some conception of the scope it covers will be obtained from a perusal of the following chapter headings, namely: Milk Secretion; The Chemical Composition of Milk; Factors That Affect the Composition of Milk; Physical Properties of Milk; The Testing of Milk and Cream; Market Milk; Certified Milk; Buttermaking; Cheddar Cheese; Fancy Cheeses; Farm Dairying; Condensed and Powdered Milk; Fermented Milk; Ice Cream Making; The Relation of Bacteria to Dairy Products. This volume is profusely illustrated and it should in the interest of better dairy products have a wide sale. The regular publisher's price is $2 and it is for sale by The Wisconsin Farmer at this price.

The advice has been given to cut soy beans when three fourths of the leaves have fallen and most of the pods have turned color. If cut earlier they are difficult to cure and if later there is a loss of grain from shattering of the pods.

At Last!

AT last! A perfect milking machine. Readers of the Iowa Homestead are hereby informed that, at last, they can get a milking machine that does the work safely and does it right. Those old objections to milking machines are now eliminated. This machine is

Shippart's Valveless
Hand Milker

Run by hand—just the thing for the farmer with 6 to 60 cows.

A child can run it—not as much work as pumping water — saves expense of power milkers — absolute simplicity. Controls like the hand—different for each cow. Just takes the milk out—valveless! The *milking machine question solved!*

Illinois Bankers Visit Wisconsin

Real Sights in Dairyland Greet the Eyes of Bankers Who "Came Up Out of Egypt" to Get Pointers.

MORE than 400 bankers and farmers from the "Egypt" country in southern Illinois came to Green county on a special train Wednesday, September 26th, to see at first hand the source of $4,000,000 worth of dairy products annually manufactured within twenty-four square miles of Wisconsin territory.

The "Egypt" country has during the last years become interested in dairying. Calf clubs have been started in every township with the result that an already growing enthusiasm has been speeded up still more. The Illinois counties represented by the visiting bankers and farmers were Fayette, Effingham, Marion, Franklin, Jackson, Randolph, Christian and Williamson.

The inspiration and pilot for the visitors was Scott Mathews, formerly state dairy commissioner of Illinois, but now dairy commissioner of the Illinois Central Railroad.

The tour included farms, towns and factories. It showed the visitors not only what sort of cows are necessary to produce the enormous total of $4,000,000 worth of dairy products, but also the manner in which these cows have to be cared for, fed and housed.

The line of automobiles, which started out of Monroe early Wednesday included a good many Green county farmers who went along to answer hundreds of questions which constantly came up. Before starting on the trip the large Borden Condensery at Monroe was inspected. Then the farm of Jacob Aultman, a little ways out of Monroe, was visited. Mr. Aultman has a large herd of Holsteins and milks on the average of sixty to seventy cows the year around. The large, modern barn, with an abundance of light and ventilation, made a good impression on the visitors. The barn can house eighty cattle without crowding. On the far end two great silos testified to the owner's respect for King Corn as a dairy feed.

Next Burgy & Wittenwyler's Cheese Factory, on the Monticello road, was inspected. The factory has been making limburger cheese since 1877. Though conducted as a private enterprise for a good many years, it is now run on the coöperative basis. The output amounts to about five tons of limburger each month. It is typical of the 142 cheese factories located in the various townships of Green county. From twelve to twenty patrons furnish the milk necessary for the cheese making. Being run coöperatively, profits are divided according to the prices obtained by the sale of the products. There are over 2,000 farmers in Green county delivering milk to cheese factories and condenseries. Creameries are few and in nearly all cases they are part of the cheese factory. Each year the milk from 40,000 Green county cows is manufactured into products for human consumption. From the milk are made 13,000,000 pounds of cheese and nearly 27,000,000 pounds of condensed milk. A half million pounds of butter manufactured each year seems so out of proportion that it is hardly worth mentioning.

From the cheese factory the way led to Jacob Voegeli's farm on the other side of Monticello. Mr. Voegeli is of Swiss parentage and he has retained a liking for the Brown Swiss cattle. His herd of 100 head show that they are well bred and properly handled. The herd was out in the field and brought many an enthusiastic statement from the visitors as they carefully looked the animals over. From the pasture the crowd went to the barn, now nearly completed. This barn, costing all of $10,000, has every practical feature of equipment and sanitation. The principles of light, ventilation, warmth and sanitation have been particularly well taken care of. Silos on the hillside of the barn empty into the cow barn at a convenient spot. Dinner and a short program at New Glarus brought the first half of the trip to a successful close. A weak drizzle was not enough of a rain to spoil the trip.

JACOB VOEGELI'S HERD OF BROWN SWISS ATTRACTED ATTENTION.

From New Glarus the autos speeded over to Baltz Hoesly's farm on the road back to Monticello. The battery of four silos behind the barn showed what Mr. Hoesly thinks of silage in connection with dairying. Holsteins are the money-makers here. About forty head are milking at the present time, but this number is considerably increased during the winter months.

From Hoesly's to Monticello, where speeches were made, to Wittwer's cold storage plant and back to Monroe finished the day's program of seeing the various processes of cheese production. From farmer to factory to storage plant to the market is the route each pound of cheese must travel. In return for the cheese money is paid to the storage plant, to the factory, and to the farmer. For all these transactions banks and bankers are necessary. That is why bankers in all parts of the country are becoming more and more enthusiastic about dairying. Before a banker will do anything, however, he carefully investigates a proposition and so convinces himself of the soundness of the enterprise. It is safe to say that these Illinois men will go back to "Egypt" ready to lend money for dairy purposes to all deserving farmers without the least hesitation. T. C. Hefty, of the New Glarus Bank, in addressing the visitors at New Glarus, told how twenty years ago the total deposits of the bank after two years in the field amounted to only $30,000. Today two banks are doing business in New Glarus and from a radius of only six miles the total deposits are $1,000,000. Of this amount very little comes from the town of New Glarus, which has only a few hundred inhabitants.

BATTERY OF SILOS ON THE BALTZ HOESLY FARM.

There is money in it for those sections that have taken to dairying. Not only by the bank deposits, but also by the appearance of the farms, the stock and the buildings, is this evident. All during the trip herd after herd of fine cattle came into view grazing in the pastures along the road. Farm buildings were large and in good repair. Farm homes seemed more prosperous and comfortable. The impression this trip made on the "Egypt" crowd will not be without results.

After a comfortable evening spent in visiting at the smoker that had been arranged, the entire party left for Chicago, tired out, but with a vision of million-dollar deposits.

FAMILIAR HOLSTEIN CATTLE SCENE IN GREEN COUNTY, WISCONSIN.

Keeping Your Cows On a Business Basis

KRAUSE DAIRY FEED is a better business proposition for you than any combination of lower grade stuff. You feed for results and safety. You want a maximum milk yield and a healthy herd. Krause Dairy Feed will give you both. It has proved its sterling value for thousands of feeders.

It is a highly nutritious, easily digested and scientifically balanced ration which will give your cows exactly what they need for big, rich milk production without forcing.

Its formula was worked out under the approval of experts in two of the leading agricultural colleges. It is the result of long, successful experience in the manufacture of dairy feeds.

DAIRY FEED

Fed alone or with home grown products, KRAUSE DAIRY FEED is always a money maker.

Cows Thrive On It

KRAUSE DAIRY FEED contains the following ingredients: distillers' grains, gluten feed, cotton seed meal, wheat bran, malt sprouts, wheat middlings, brewers' grains, hominy feed, linseed meal and salt. These make a perfect mixture which your cows will relish and respond to immediately.

It's a waste of time and labor to mix your own feed when you can be certain of getting definite, positive results with this ideal dairy ration.

Sell Your High Priced Grains

Sell your high priced grains and use KRAUSE DAIRY FEED. Compare the costs and the results with any lower grade combination and you will find that you are saving and making money.

Free Sample

Write us at once for free sample and useful record book telling all about KRAUSE DAIRY FEED. Be sure to give name of your dealer.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

A Small Flock Makes Good.

A flock of three dozen hens laid twenty dozen eggs last January, and thirty dozen in February. As the pullets began to lay in March, it was not possible to know how many eggs the hens alone produced, but the yield for that month was 115 dozen, and 130 dozen in April, which usually is the banner month for eggs. Only twenty-five chicks were lost through the hatching period and 300 lusty youngsters was the increase of the flock from the original three dozen hens.

The pullets were kept over, some of the cockerels used and the surplus sold on the market. Whether consumed or sold it is all the same; they were worth not less than 75 cents each, which is a very conservative estimate, and the pullets as yearlings, after having laid two summers, will be easily worth $1 each. Grain is high, but it is a safe estimate that farm poultry can be kept for 50 per cent less than where they are confined and must be fed at all times, much of which the range hen garners from the fields. Taking it all in all, it has been a paying proposition.

The foundation of success lies in the building for the fowls. The building is fourteen feet deep and twenty-eight feet long, facing the south, as all poultry houses should. The opening on the south is enclosed with windows, alternating with an open space covered with screen wire. These openings are left open through any reasonable weather, having curtains to roll down during storms. The windows even then keep the house well lighted.

The openings and the windows are situated fully a foot and a half from the floor, so that the draft will not strike the fowls. The dropping boards are placed on the north and east sides of the building, three feet from the floor, above which are the perches, eighteen inches between, giving plenty of space when cleaning the droppings from the boards. The perches are 2x4's, the wide side up, and all placed on a level. The dropping boards give much added space. Only for that there would need to be several feet partitioned off to keep the droppings from becoming mixed with the scratching material.

The walls back of the perches are lined with building paper to make it warmer, and there is a curtain suspended across the perches, not far from the fowls' heads, to keep the animal heat from going skyward. A very neat arrangement is in the placing of the nests. They are suspended under the dropping boards, sliding out like a drawer. There are round holes in the back of the nests where the hens may enter. It is the first time we have known of nests under the perches that proved wholly satisfactory. Usually it is such a nuisance to get down upon the ground and creep back to the nests. And besides, nests placed directly on the ground tempt fowls to eat their own eggs—what the roosters leave, which are not many, once they get the habit.

A self-feeder is placed in one corner of the house; it has three compartments, filled respectively with charcoal, grit and crushed oyster shells. A long trough is filled with a mash early in the morning, about what the fowls will eat in a short time. Tankage and milk supply the meat element, without which there would be a decrease of about half in the egg yield. At least this has been tried and found to be the case in an experiment.

Wheat, rye and oats are scattered in the litter after the mash is gone, and the hens are required to do some tall digging for it. Then, so that they will go to bed with full crops, corn is given in the evening. The hens have the run of the feed lots where the cattle stay only in snowy weather. They are never permitted to walk in the snow. "Cold feet" are bad for both hens and people.

Only in the very cold weather the water does not freeze in the house; in case it shows up with a thin skim of ice hot water is poured into it to keep a comfortable temperature for the fowls. This is a reminder of another experiment that was tried out last winter. Fowls that were laying a goodly number of eggs fell off half when the water was withheld.

An account is kept by marking the number of eggs each day on a calendar for the purpose, and then at the end of each month the account is registered in the farm account book kept for the purpose. Making a note on the calendar is very easy and done by many farm poultry people, but how many go a step farther and keep a farm account proper?

This is only a common farm flock kept on a rather small farm, as farms go in the central states, but the net profit is unusual. Far above the average. It is not advisable to change your plans if you are getting good results. Indeed, about the last thing to do is to make a radical change with poultry that is making good. However, no flock that is making a profit for its owner but that has some point or points that could be adopted by someone.

ONE MILLION DOZEN EGGS SHIPPED TO EUROPE

—Reports State Department of Agriculture. And George L. Dillingham, past master of the New Jersey state grange, predicts eggs will go to $1.00 a dozen.

Cash in on your hens. You can increase laying and improve the health of your layers with Sloan's Liniment, discreetly mixed with food. Write us for full directions and convincing testimonials of the effectiveness of this remedy in epidemics of roup, bumble foot and other poultry ailments. Instructions free.

At all dealers. 25c, 50c, $1.00.

RHODE ISLAND REDS—Setting of 15 eggs from pure-bred prize winning Rhode Island Reds, $2 per setting; three settings for $5. Bildebrandt & Vea, Stoughton, Wis.

What Makes Poultry Pay? Does Your Poultry Pay?

Treat her right and she'll treat you right

Poultry is one of the best paying things on some farms; on others it is hardly considered worth bothering about. The difference is all in the thought and care given.

About the first thing the careful poultry raiser has to figure on is how to house his flock, whether large or small, in the most healthful and practical manner.

"Old Faithful" HEMLOCK Lumber

has been the farmer's stand-by for more than 200 years. Its price is right. It is light and easy to handle, easy to work and holds nails, paint or stain in great shape. Under proper conditions it lasts—oh, say 100 years. (You should worry, after that!) To get your eye on these facts, we have had prepared, by architects who know how, plans for modern poultry houses and other farm buildings which we will be glad to supply you free.

Free Poultry House Plans! Send for the new HEMLOCK booklet and use the PLAN COUPON which is in it. All you have to do is to present the coupon to your LOCAL LUMBER DEALER and he will supply you FREE with any one or two plans in our book which contains houses, barns, garages and small farm buildings. All plans are new and original and are drawn by architects who know the farmer's needs. If your lumber dealer hasn't the plans he can get them from us.

THE HEMLOCK MANUFACTURERS
(of Wisconsin and Northern Michigan)
300 F. R. A. Building Oshkosh, Wisconsin

If lumber dealer cannot supply plans, we will send direct. Poultry House or other small building 50c. House or barn $1.00.

The United States War Department has been granted the use of a huge factory and assembly plant in Cambridge, Mass., in which they will establish a large army supply base. The factory and plant are owned by Henry Ford, the manufacturer, and will be turned over to the war department about October 15th.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Contagious Abortion.

Will you please tell me whether there is any sure cure for contagious abortion? I should like to have full information. Have you any faith in this anti-abortion serum that is recommended by many veterinarians?

Many remedies have been used in the treatment of contagious abortion with some degree of success, but there is no "quick, sure cure" for this disease. Anti-abortion serum has been used quite extensively with quite good results. Good serum from a reliable firm should be quite satisfactory.

Bloody Milk.

I have a cow which gives bloody, lumpy milk. She does not seem to have any pain when she is being milked and she is not sick in any other way. I have been rubbing camphor and lard on her udder, but it has done her no good. Will you please tell me what to do?

The condition you mention is caused by a disturbance in the udder and can usually be overcome by giving the cow a rounded tablespoonful of Glauber's salts every one to two days in feed. Also feed considerable wheat bran and salt every day. This milk should not be used for human food, but can be used for calves or pigs.

Stringy Milk.

I have a six-year-old Holstein cow that gives stringy milk. She has good Buffalo grass pasture and pure well water. She has been fresh perhaps a year and a half. The cream is especially stringy. There is no bitter taste. What can I do for her?

If this stringy milk does not come from one certain quarter begin treatment with one to one and one-half pounds of Glauber's salts dissolved in warm water and given as a drench at one dose. The amount should depend on the size of the cow. After a few days give the following: Glauber's salts, three parts; baking soda, two parts; common salt, one part. Mix thoroughly and give one heaping tablespoonful in feed once a day. Also feed laxative feed. This cow's milk may be greatly improved after she comes fresh again.

Netritis.

We have a cow that lost her calf at five months. We fear it is contagious abortion, so we want to fatten her a little and sell her for beef. However, she does not eat roughness to any extent and we do not see much gain on her with grain alone. She is very thin and weak and eats practically nothing except ground grain and ear corn. Can you give us a good tonic to stimulate appetite? She is over the calf trouble, as we had a veterinarian attend to that.

It was probably necessary for you to have the afterbirth removed from this cow. It is quite difficult in some cases to remove it and in doing so an inflammation of the womb develops (netritis) which causes the cow to become very thin and weak. She should have a powder composed of Glauber's salts, three parts; baking soda, two parts, and salt, one part. This should be thoroughly mixed and given in rounded tablespoonful doses once or twice a day in feed. Also feed one to two quarts of wheat bran twice daily and one tablespoonful of oil meal once a day.

Send the following telegram, subject to the terms on back hereof, which are hereby agreed to

WASHINGTON, D. C. OCTOBER 1, 1917.

TO THE AMERICAN FARMER, EVERYWHERE, U.S.A.

NEVER IN THE HISTORY OF OUR NATION HAS THE AMERICAN FARMER HAD THE OPPORTUNITY TO REPEAT WHAT THE "EMBATTLED FARMERS" OF 1775 DID WHEN THEY "FIRED THE SHOT HEARD 'ROUND THE WORLD" WHICH STARTED THE REVOLUTIONARY WAR.

TODAY THE "CALL" IS NOT "TO ARMS" BUT, "TO BONDS" - A CALL FOR YOU TO BUY THE NEW LIBERTY BONDS - TO LOAN TO YOUR GOVERNMENT MONEY WITH WHICH TO PROTECT YOUR LIFE - YOUR HOME - YOUR HONOR AND LIBERTY, FOR WHICH YOU WILL BE PAID IN RETURN 4% INTEREST ON YOUR INVESTMENT. NO TRUE AMERICAN FARMER WILL FAIL TO RESPOND TO THIS CALL AND THEREBY AGAIN SHOW TO THE WORLD THAT THE AMERICAN "TILLER OF THE SOIL" IS STILL - TODAY - THE BACKBONE OF THE U.S.A.

UNCLE SAM.

What Will Be YOUR Reply?

Will you be a U. S. **backer**, or

Will you be a U. S. slacker?

To win this war it requires a vast amount of money, and if we don't win it, your home, your farm, your life, your rights, your liberty become subject to ruthless destruction.

To raise this money, your Government calls upon you for a loan. It does not ask you to give money — simply to lend it and in return gives you a U. S. Government Bond, the best security on earth, on which you draw interest, greater than bank interest, free from taxation, except inheritance and income surtax.

What Will Be Your Reply?

Here is an opportunity to show your patriotism and at the same time get on the Government's pay-roll.

Here is an opportunity for you to "do your bit" and show to the world that the American farmers are still the "backbone" of their country.

Here is an opportunity to say to your nation's enemies, in language none can fail to understand, that *"money talks"*— that America knows no defeat and that we intend to wipe militarism and despotism off the face of the earth and finally insure a lasting peace.

What Will Be Your Reply?

Do you know that the total value of the 1917 crops is estimated by Government officials at $17,000,000,000 — nearly six times the amount of "The Second Liberty Loan of 1917"?

Do you know that the increase in the value of the 1917 crops over 1916 is $2,000,000,000 — almost equalling this Second Liberty Bond issue?

Don't you think then, that the American farmers ought to "respond" liberally to their Government's call, especially when they get 4% interest on their investment?

What Will Be Your Reply?

You owe it to your country to "reply" with a subscription for as many bonds as you have money to spare.

You owe it to your country to "buy Liberty Bonds" as evidence of your patriotism.

You expect your country to "protect" your life, your home and your liberty.

Your country expects you to do your share toward that end by helping to maintain its credit by lending it your money in this critical hour.

What Will Be Your Reply?

The New Liberty Bonds will be issued in denominations of $50 and up. The total amount is $3,000,000,000 or more.

The interest rate is 4% paid semi-annually on Nov. 15th and May 15th. They can be paid for in installments: 2% on application; 18% on Nov. 15th; 40% on Dec. 15th; 40% on Jan. 15th, 1918. They are 25-year bonds, redeemable in ten years.

They carry a conversion privilege and can be changed for any higher interest bearing bonds issued at any succeeding time during the war.

They are exempt from taxation except inheritance and income surtax. The practical effect of this is to exempt holdings up to $5000.

The subscriptions will start Monday, October 1st, and close October 27th.

Buy Your Bonds Today!

Don't put it off a moment. You have nothing to risk. Fill out the application below at once.

Send it in to the publisher of this paper and you will have answered your country's call loyally, patriotically and also answered YOUR NATION'S ENEMIES in a way that will bring peace the quickest and most lasting.

If you want to buy, say one $50 bond and wish to pay for it on the installment plan, you send with your Application Blank 2% or $1.00 then on Nov. 15th you remit the 18% or $9.00; on Dec. 15th you send $20.00 and on Jan. 15th, $20.00 making a total of $50. If you buy two or more bonds your payments increase two or more times.

Don't sit back—slacking—wishing for peace. Wishbones are mighty poor back-bones. YOU, the farmers, if worthy of being credited as the *"backbone of our nation,"* must furnish the backing.

Do It Now!

The Kind of a Kitchen Mother Always Likes.

Laura B. Breese, Department of Farmers' Institutes of the University of Wisconsin, Describes "Easy" Farm Kitchen.

The kitchen is the most important room in the house. Here mother must spend much of her time and unless care is taken too much of her energies.

Is it not of value to make this room most convenient to conserve the strength and time of the most precious member of the family? Too many mothers are slaves to the routine of kitchen work today—a part of the reason due to improper tools for work and inconveniently arranged equipment.

If women, working in such kitchens, registered their steps they would find they were walking many miles a day—and needless ones, too. No wonder night finds them foot-sore, weary in body and mind!

Think of the value to the family, if the kitchen work was accomplished in half the time and with half the energy sometimes expended! It would mean more time for mother with her children, more time for the story, the song and the games for them—for recreative changes for herself and for the coöperative work towards community betterment.

Sometimes the "easy" kitchens can be arranged for without much expense by drawing pieces related to each other together.

When preparing meals the work table, the stove and side table are needed, and steps can be saved by having these near together and in the order used. The dish is prepared at table, then the stove is needed next, and the side table next, in order to cool, dish up or garnish the food before sending to the dining table. If these pieces are arranged in this order there will be no retracing of steps required in that process of work.

For clearing away meals, the sink and cupboard for dishes should be near each other and the process of dish-washing carried on from sink towards cupboard. In a small kitchen the sink with an expansive table shelf attached is found very convenient in the center of the room. Many of the kitchens in the farm homes are large in floor area, and steps can be saved only by grouping the equipment in some manner as suggested above. The other part of these large kitchens (farthest from dining room) may be converted into a sewing corner or laundry, with the fitting equipment for either one concentrated there.

CUPBOARDS AND DRAWERS CONVENIENT TO SINK AND WORK TABLE SAVE MANY STEPS.

Small cupboards or shelves near each large piece, to keep the smaller utensils and supplies needed at each place, will be found great step savers. If a kitchen cabinet is not the table used, some cupboards for the dry supplies should be built over the kitchen table for convenience sake.

Stove lifters, asbestos mats, kettle covers, etc., should be kept on hooks or racks near the stove. Cleaning powders, soap, scrapers, etc., needed at sink will save steps, if kept on a shelf above the sink.

Arrangement of equipment is a great essential for making work easy and every housewife should decide what is the very best arrangement for her kitchen. Light and good ventilation are requisites in the kitchen mother likes best.

Dark rooms are depressing, gloomy and unsanitary. Lighten the walls and woodwork by using light color paint. Buff, pale green, tan, gray or creams are good kitchen colors.

Linoleum is the best covering for the floor; it looks attractive, is comfortable under the feet and is most easily kept clean. It will eliminate the back-breaking scrubbing for mother, who likes a spotless floor.

In mother's kitchen, let us have a chair to use at sink and table, when possible—and a comfortable easy chair for a few minutes' rest between pieces of work—a table with a few magazines and paper handy near her comfortable chair.

The housewife who accomplishes her work with the least expenditure of time, energy and sweet temper usually makes the best homemaker. It is only the foolish who can scoff at the wisdom of the housewife who undertakes to remove the drudgery from her housekeeping.

In mother's kitchen we want the running water and sewage disposal and the labor-saving equipment now available.

NINE-MONTHS-OLD TRIPLETS OF EDWARD McNEIL—TWO GIRLS AND A BOY.

Vinegar From Surplus Apples.

With proper care a good grade of cider vinegar may be made from all low-grade apples, except a few of the early summer varieties.

Only ripe apples should be used, because green apples are too low in sugar and are likely to make a weak vinegar. Wash only the dirty apples, because clean apples are covered with yeast spores that are needed in the alcoholic fermentation. Remove all wormy, rotten or moldy fruit, also sticks and leaves. Then the juice should be pressed out.

After pressing, the juice should be strained and run into kegs or barrels that have been thoroughly sterilized by steam or boiling water. Metal containers should never be used. All vinegar barrels should be washed out; the vinegar remaining may cause the juice to become too acid instead of forming alcohol. It is not advisable to add dry yeast to cause fermentation, as it is of little value. The yeasts on the skin and in the surrounding air are sufficient.

Fill the barrels about three-fourths full, lay on side and cover the bunghole with a double thickness of cheesecloth to allow air to enter and yet keep out dirt and insects. The barrels should be placed in a cellar or similar place with a rather uniform temperature between 45 and 60 degrees. Fermentation will be completed in from two to six months and will be alcohol or hard cider. From sixteen to twenty months will be required at 65 to 75 degrees temperature to change this to vinegar.

To Can Chicken.

I want to can some chicken and would like very much if you would give me directions for doing so.—Mrs. G. W. M.

Chicken to be canned may either be cooked and then packed in the jars or it may be packed in the jars while raw. In the latter case the sterilization period is one hour longer than in the former.

Kill the fowl and draw at once. Wash carefully and cool. Then if it is desired to first cook the meat, boil it until it can be removed from the bones. Pack in glass jars, fill jars with the liquid, which has been boiled down to one-half its original volume. Add one level teaspoonful of salt to each quart of meat. Place rubber and cap in position, not tight. Sterilize three and one-half hours in hot-water bath, three hours in water seal outfit, two and one-half hours in steam cooker at five pounds' pressure, two hours in steam cooked at ten pounds pressure. Remove the jars and tighten the caps.

By the other method the raw meat is cut in convenient sections, removing the bones, and packed in glass jars, adding one level teaspoonful of salt to each quart. Fill the jars with

boiling water and proceed in the same manner as described above, except that the sterilization period is one hour longer.

Advice About Fern Growing.

To the Editor:—In a recent issue there was an inquiry from a subscriber about the care of ferns. I have very good luck with mine and I am glad to give what information I can.

When potting the fern take some dirt from near the wood pile and put it in the oven. Let it stand until it gets so warm that you are sure all the germs and worms are killed. Then take it out and let it get cold before you put the fern in.

You should give the fern water once a week, and give it good and plenty when you do water it. Twice a year take some manure and soak in soft water (never use hard water) for about half a day. Then strain it and give the water to the fern.

When the leaves begin to die cut them out. When the water stands on top of the dirt do not give the fern so much water, because ferns have a resting time about two months a year.

Keep the fern where it can get all the sun, but never move it about, because it likes to stand alone and untouched. Never let the wind blow the leaves about.

Now if you will do as I have told you I am sure that you will always have good luck with your ferns. I have a fern that stands four feet up from the floor, but still many of the leaves lie on the floor.

Mrs. R. R. Richardson.

Cauliflower.

To the Editor:—A short time ago Mrs. J. C. M. inquired for ways to prepare cauliflower for table use.

We have it in our garden every year and find that it makes an excellent table vegetable. Break the head into small pieces and wash thoroughly, then put on to cook in plenty of cold, salted water. Allow it to simmer gently about twenty minutes, or until tender, then drain and season with butter and a little sweet cream and serve. Mrs. E. Sefton.

Recipes.

Hominy Pancakes.—One cupful cold cooked hominy, three-fourths cupful flour, one teaspoonful salt, one cupful milk, one egg. Mash hominy with a fork or force it through a potato ricer. Mix with it the flour sifted with the salt, add egg (well beaten) and milk. Drop by spoonfuls on hot greased griddle.

Sour Cream Pie With Dates.—Plain pastry, one cupful chopped dates, one cupful sour cream, one-fourth teaspoonful salt, one cupful sugar, one egg, one teaspoonful flour. Beat the egg well and add to it the sugar and flour mixed together; add the cream, dates and salt. Bake between two crusts.

Fried Cauliflower With Onion.—One head cauliflower, one onion, two tablespoonfuls fat. Cook a good-sized head of cauliflower in boiling salted water until tender. Drain and separate into flowerets. Brown the onion, minced, in the fat; add the cauliflower and cook ten minutes.

Oatmeal Macaroons. — Two tablespoonfuls butter, one cupful sugar, two eggs, two and one-half cupfuls rolled oats, two and one-half teaspoonfuls baking powder, one-fourth teaspoonful salt, one-fourth teaspoonful vanilla. Cream butter and half the sugar. Add beaten yolks of eggs and the remainder of sugar. Stir in the rolled oats mixed with baking powder, then the vanilla and carefully fold in beaten whites. Drop from teaspoon on buttered tins and bake. Make quite small, as they spread a great deal.

Escalloped Rice With Cheese.—Four cupfuls cooked rice, four cupfuls thin white sauce, one-fourth pound cheese. Mix white sauce with rice. Put alternate layers of this mixture and grated cheese in baking dish. Cover with bread crumbs and bake in moderate over until hot through and crumbs are brown.

Poverty is only contemptible when it is felt to be so. Doubtless the best way to make our poverty respectable is to seem never to feel it as an evil.—Bovee.

THE YOUNG FOLKS.

Helped Tend 56 Acres of Corn.

Dear Young Folks:—I have enjoyed reading your letters very much. I am twelve years old. I have three brothers and three sisters. My baby sister is six months old. Her name is Minnie Joan. She carries the names of her two grandmothers.

I love to go to school. I have a good teacher and I love all of my schoolmates. We have a seven months' term.

I live on a farm. My papa owns 129 acres two and a half miles from town. My older brother and I planted and tended a 56-acre field of corn this year. Our oats crop was fair. Papa gave my older brother and me a two-year-old colt. We have her broken to ride, but papa says she is too young to drive. Her name is Bell. I hope there will be more letters from boys who live on the farm. Alvan.

Quite a Family of Dolls.

Dear Young Folks: I enjoy reading your letters very much and hope you will like mine. I am ten years old and go to school every day. My home is right near a lake and I spend most of my spare time rowing and fishing. My right home is in Minnesota, but I am staying with my aunt and uncle.

I love to play with dolls and I have three of them, Alice, Vivian and Bobby. I wish the young folks would write more stories and riddles. Here is a riddle: What belongs to yourself, but is used more by others? Lila.

Answers Frances' Riddle.

Dear Young Yolks:—I like to read the Young Folks' page very much. I live on a 140-acre farm five miles from town. I am nine years old and in the fifth grade. I have four brothers and three sisters. My oldest brother and sister are married. One of my brothers is a soldier and is in Texas.

I will give the answer to Frances' riddle: Four and twenty white sheep standing on a hill, now they go, now they stand still. I think it is the teeth. Minnie.

Has Many Pets.

Dear Young Folks:—I am a girl thirteen years old and in the eighth grade this year. I live on a 200-acre farm a mile from town. I go to school every day and have a mile to go.

For my pets I have a white rabbit named Nebuchadnezzar and two cats named Tom and Frank. I also have a white cow and calf. I have a great deal of fun with the cow. I can ride her and crawl all over her. Her calf is tame also. The cow's name is Snowball and the calf's name is Snowflake. Clarissa.

Loves Her Dog Dearly.

Dear Yolk Folks:—As I have never written to your page I am going to write now. I am a girl twelve years old. I am going to school and am in the sixth grade. I live on a 160-acre farm two and a half miles from town and a quarter of a mile from school. I have a pet dog and I love him very much. I feed him every day, bread and milk.

Erma asked the riddle, how can you get the water out of a bottle without breaking it or pulling the cork out. I think the answer is to push the cork in. Ruth.

I think that there is success in all honest endeavor, and that there is some victory gained in every gallant struggle that is made.—Dickens.

International Sunday School Lesson

(By E. O. SELLERS, Acting Director of Sunday School Course.)
Lesson for October 14, 1917.

Returning From Captivity.

LESSON TEXT—Ezra 1.

GOLDEN TEXT—The Lord hath done great things for us; whereof we are glad.—Psalms 126:3.

Israel went into captivity because of her sins. The time of her disciplinary process was about to end, as its purpose was now accomplished: Namely, the cure of Israel's idolatry. Ever since the Babylonian captivity the Hebrew people have been worshipers of the one God. Monotheism has stood forth as a vital characteristic. The main reason for the Jews' maintenance of racial identity in spite of their national dislocation and the breaking up of their social ties, is the unity of their faith, around the one God.

I. The Proclamation of Cyrus (vv. 1-4).

(1) The Time of (v. 1). The first year of Cyrus; that is the first year after his conquest of Babylon.

(2) How It Was Brought About (v. 1). The Lord stirred up his spirit. The Lord often uses very unlikely agents in the accomplishment of his purpose. There is nothing too hard for him. He can readily use a heathen king to accomplish his purpose. He can find a way of approach to any heart. Likely Daniel was the agent used to bring the matter to the king's attention. Daniel was still the influential prime minister of Babylon. From his study of the prophecies of Jeremiah (Jer. 25:12; Isa. 45:1,; compare Daniel 9:2), he knew that the time was near for the return of the people to their own land, so he likely brought the matter to the attention of the king and persuaded him to thus favor his people.

(3)Its Contents (vv. 2-4).

(a) A confession of the true God (vv. 2, 3).

He acknowledges him to be the God

Heat All Your Home with One Register

When you get out of bed on a bitter cold morning, how much it means to enjoy real warmth throughout your whole house!

And when you come in from the morning chores, what a comfort! Then after a long drive it's royal to get into a house that is warm and cozy.

And it's all so easy—and so economical. For about the price you would spend for heating stoves, that would heat part of your house only, you may have all the house warm, by installing the thoroughly tested and widely known

PIPELESS CALORIC FURNACE (TRADE MARK)

The Original Patented Pipeless Furnace

We guarantee a 35% fuel saving over the expense of heating your house by any other method when you use a Caloric Pipeless Furnace. Many of our customers say that they save half. This guarantee applies to coal, coke and wood.

You will not know real heating comfort until your home enjoys the balmy circulation of healthful warmth produced by the Caloric. All the heat of your fuel goes right into all your rooms through only one register, and circulates to the furthest corners uniformly, warming every nook and cranny with purified air.

Over a thousand people have written a book about the satisfaction of the Caloric, and many thousands more endorse what these say. The proof of its success is indisputable.

Let the Caloric dealer show you. If you don't know him, let us give you his name and send you our testimonial book.

of heaven, the Most High, the Supreme God, a God of goodness. He declared, "He has given me all he kingdoms of the earth," and that God had with authority laid upon him the charge of building him a house at Jerusalem.

(b) A Generous Permission to Israel (v. 3). All who desired to go up to Jerusalem and build the Lord's house were permitted to go. He even commanded the blessing of the Lord to be upon them.

(c) A Positive Coöperation (v. 4). None were obliged to go up, but a positive obligation was laid upon those who did not go up to render assistance to those who did. They were to aid in the building of the house of God by giving money, beasts and goods. It was more than a free-will offering, an obligation in addition thereto. The obligation was even wider than the people of Israel. The heathen were asked to render aid.

II. Response to the Proclamation of Cyrus (vv. 5, 6).

(1) By Israel (v:5). Strange to say the decree of Cyrus was not met with great enthusiasm. Only a small number, chiefly from Judah and Benjamin, returned (v. 5). For most of them it meant giving up business interests, for they had settled down to the regular callings of life. Besides the sacrifice of business interests it involved great risks as to the future. The entire company, including servants, was about 50,000 (2:64). Of this company we note the following divisions; first, chiefs of the fathers of Judah and Benjamin, that is magistrates; second, priests and Levites, leaders in religion; third, skillful artificers, head workmen.

(2) By Their Neighbors (v. 6). This response was apparently more hearty than that of the Jews themselves. Their neighbors gavev freely of gold, silver, beasts and goods. God had not only graciously disposed the heart of Cyrus toward his people, but they found peculiar favor from their neighbors, so that their wants were abundantly supplied.

III. Restoration of the Sacred Vessels (vv. 7-11). These vessels had been carried away to Babylon many years before. Little did Nebuchadnezzar realize that he would put into safe keeping the vessels which would be needed at this time. They were carefully numbered and turned over to the proper officers. Except for their desecration in Belshazzar's feast, they were none the worst for having been carried away. These were brought up to Jerusalem from Babylon.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Enclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date fall and winter 1917-1918 catalog, containing 650 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating thirty of the various simple stitches), all valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

Waist 2229-Skirt 228—A smart combinaton for business or home wear. The waist pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. The skirt in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. A medium size will require girl. The pattern is cut in 4 sizes: 2, 4, 6 and 8 years. Size 6 will require 2¾ yards of 36-inch material.

1841—Boys' blouse, with yoke in square or pointed outline, and with two styles of collar. The pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 years.

6⅞ yards of one material, 36 inches wide. Two separate patterns, 10 cents for each pattern.

2024—Ladies' house dress with sleeve in either wrist or elbow length. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 7¼ yards of 36-inch material.

2231—A simple dress for mother's It requires 3⅛ yards of 36-inch material for a 12-year size.

2250—Set of underwear for boys. The pattern is cut in 5 sizes: 26, 28, 30, 32 and 34 inches breast measure. Size 32 quires 7 yards of 36-inch material for a 36-inch size.

2253—One-piece dress for junior. The pattern is cut in 3 sizes: 12, 14 and 16 years. Size 14 requires 4½ yards of 36-inch material.

1998—Dress for misses and small women. The pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 6½ yards of 36-inch material for an 18-year size.

2256—A comfortable, stylish dress. The pockets may be omitted. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 2⅞ yards of 36-inch material.

2257—A seasonable model. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. Size 10 requires 5¼ yards of 44-inch material.

2245—Ladies' slip. The sleeve may be omitted. The pattern is cut in 4 sizes: Small, 32 and 34; medium, 36 and 38; large, 40 and 42, and extra large, 44 and 46 inches bust measure. Size medium requires 4½ yards of 36-inch material.

2234—A simple, practical apron. The pattern is cut in 4 sizes: Small, 32 and 34; medium, 36 and 38; large, 40 and 42, and extra large 44 and 46 inches bust measure. Size medium requires 4¾ yards of 36-inch material.

2085—A smart and popular model. The pattern is cut in 4 sizes; 6, 8, 10 and 12 years. It requires 2 yards for the guimpe and 3 yards for the dress, for a 6-year size, in 27-inch material.

You Can Be Proud of the Baking

that you take out of the oven in an Eclipse JOY Range. All parts of the big oven get *even* heat. Fire box and flues are made in the *right sizes* to get the *most heat* from the least fuel. Can do an average baking with only *two* good sized sticks of cord wood. (Can use any kind of fuel.)

ECLIPSE

STOVES AND RANGES

This Eclipse JOY is the range with *many* big features. Hot-all-over top—heats all six lids. Saves money in fuel, saves time in getting up meals—gives you more cooking surface. Also note that the smoke pipe is *behind* the splasher back, which gives you more room for cooking utensils. Sliding damper gives you perfect control of the oven. Beautiful design, smooth finish with or without white enamel splasher back and oven door front. Made of cast iron—guaranteed never to rust out and are slow to wear out.

Write for our book of helpful recipes—shows many suggestions on getting up good meals at low cost. WRITE today.

Hogging Down Corn Saves Labor

Better Gains Being Made by This Method of Harvesting Corn Than by Dry Lot Feeding.

THE practice of letting hogs harvest the corn crop has grown rapidly in favor within the last few years. No longer is it considered a lazy man's method. Progressive farmers have given it a trial and in a large number of instances, they have found it more profitable than harvesting the crop by hand and feeldng the grain on the ear. Practicaliy the only drawback is that in wet seasons some of the corn will get tramped in the mud and be wasted.

In order to determine definitely the advantage of hogging down corn and also to learn the value of different supplementary feeds, the Iowa Experiment Station has conducted a series of experiments along this line with spring shoats. From these experiments it has obtained results which show that hogs make better gains per bushel of corn when allowed to forage in the field than when given ear corn in dry lots. But the increased gain is not the only advantage, since there is a considerable saving of labor and expense ordinarily required in harvesting the crop and feeding by hand. In the experiment the cornfields that were hogged down lay on second bottom land with a fairly rich soil that produced about fifty bushels of corn per acre. A sufficient number of shoats were put upon the land to clean up the corn in about two months. Then, in order to serve as a check, another group of shoats were fed in a dry lot, receiving all the ear corn they would eat. The shoats averaged about seventy pounds each at the beginning of the experiment.

Since corn is not a balanced ration, both the field shoats and those in the dry lots were allowed an additional feed of meat meal, amounting to about 10 per cent by weight of their total ration. At the close of sixty days the field shoats had gained 1.23 pounds daily per head with an average daily consumption of 4.39 pounds of corn and about one-half pound of meat meal, while the dry-lot shoats gained 1.17 pounds daily with a consumption of 4.26 pounds of corn and one-half pound of meat meal, the corn in each case being figured on the basis of shelled corn. It will be seen that the field shoats consumed larger quantities of corn than the lot-fed shoats, but they made larger gains to offset it. This is best shown by figures on the amount of feed consumed per hundred pounds gain. For instance, it required only 356 pounds of corn and 41 pounds of meat meal to make 100 pounds gain in the field shoats, while it required 365.1 pounds corn and 43.7 pounds meat meal to make the same gain in the lot-fed hogs. With corn at $1.50 a bushel and meat meal at $90 a ton, this would be a saving of 45 cents per hundred in favor of the field shoats. In order to determine the value of a home-grown feed to supplement corn in place of meat meal, another group of shoats were put up in a cornfield in which soy beans had been sown with the corn. This combination did not produce the gains that the meat meal ration did, but it proved to be more profitable than feeding straight corn with no supplement. To make a suitable comparison, one group of shoats were allowed to run in the cornfield, but were not given any other feed. These shoats made an average daily gain of only .42 pound, while the shoats running in corn and soy beans made a gain of .82 pound. Each of these gains is much smaller than that obtained by using meat meal with corn, which it will be remembered, was 1.23 pounds. Thus we find that a supplementary fed makes the gains much more rapid and meat meal makes a better supplement for corn than soy beans sown in the same field. Figured on an acre basis, corn alone made 357 pounds of pork per acre, corn and soy beans made 505 pounds and corn supplemented with meat meal made 795 pounds per acre. Of course, the meat meal was not supplied by the field and this must be considered when figuring pork production per acre, but the point to be emphasized is the advantage of using a supplement in order to balance the corn ration.

Still another test was made in which rye was sown in the corn at the time of last cultivation, and the shoats were turned in after the corn became well dented. The hogs in this case received meat meal in addition to the corn and rye. With such a combination they made an average daily gain of 1.44 pounds, with an average consumption of 4.38 pounds of corn and about one-half pound of meat meal. The amount of rye eaten cannot easily be calculated, but these results when compared with those given above, in which corn and meat meal were furnished without rye, show that rye increases the rate of gain. There is danger, however, of cutting the corn yield by putting rye in the same field, which may result in a loss of feed produced per acre.

From the figures mentioned, it is evident that hogging down corn is an excellent means of harvesting the crop, producing very satisfactory pork gains if a good supplementary feed is added to furnish protein which the corn lacks. Several other supplements may be used which are probably just as good as the ones used in the experiment. Many farmers have found that rape produced big gains on shoats that have the run of the cornfield. There is this difficulty with rape, however, that a good stand is often hard to get. But in spite of the fact that it is not a sure crop, farmers have frequently reported splendid results with it. Rape may be sown right in the corn rows, or may be put in an adjoining field to be connected with the cornfield when the time is at hand for hogging down the crop.

Clover and alfalfa also make good pasture crops for hogs in the cornfield, but they cannot be sown in the corn to advantage. An adjoining field should be provided at seeding time. But whatever the supplement to corn may be it should have a relatively high percentage of protein in order to go well with the fat-forming nutrients in corn. Tankage, oil meal, shorts, skim milk and buttermilk, all are good, and their relative prices are about the only important factor in determining which should be used. But as a rule they are apt to be more expensive than home-grown feeds such as the pasture and forage crops previously mentioned.

With regard to the time of turning the hogs into the corn, various tests have indicated that the greatest yields of pork are obtained when hogging down begins just after the corn becomes well dented. If it begins earlier, the feeding value of the crop is not so great and consequently the hogs make smaller gains. The hogs should be put on full feed before the corn is ready, and if possible given some green fodder. This prevents danger of scours and other digestive troubles when they are turned into the field. At the beginning of the hogging down period some farmers have found it advisable to turn the hogs into the cornfield for only a part of a day at a time, keeping them in a dry lot for the rest of the time and feeding a little oats or some similar feed that will counteract the laxative effect of the green forage.

If the field is large, temporary fences will make the hogs do better work in cleaning up all the corn. The preference among farmers seems to be a twenty-six-inch woven wire fence, which may be tied fast to the cornstalks with binder twine. The ends, however, should be fastened to rigid posts and where the cornstalks are weak, stakes should be driven into the ground to support the fence. As soon as the corn is cleaned up in one area the fence may be extended farther into the field.

The number of hogs to put in the field depends on the time when it should be cleaned up. In the experiment about two months were required to clean up a fifty-bushel crop, the number of hogs averaging about twelve to the acre. But many farmers plan to clean up a field in about a month's time and then finish fattening the hogs in the feed lot. This practice works well, since the animals develop a ruggedness and constitution from foraging in the field that allows them to make big gains when put upon a heavy fattening ration. As a rule, twenty shoats weighing around 100 pounds each will clean up an acre of corn in a month. At the end of this time they ought to weigh nearly 140 pounds; then they may be brought up to 200 pounds in the feed lot in another month.

When properly managed the hogging down method will yield a very satisfactory return. In the experiment it will be remembered that corn in the field with a supplement of meat meal produced 795 pounds of pork per acre. At 19 cents it is worth $151.05. By subtracting from this figure $14.67, the cost of 326 pounds of meat meal used, we have $136.38, the return on hogging down an acre of corn. But the figures do not tell all the story, since the saving in labor and expense of harvesting the crop and the fertility returned to the soil are no small items in favor of this practice.

Make more Money Pull big stumps by hand

Showing easy lever operation

Clear your stump land cheaply — no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage — same principle as a jack. 100 pound pull on the lever gives a 48-ton pull on the stump. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Have you tried Blasting?

Do you know that in the last year the farmers of the United States used *more than 10,000,000 pounds* of explosives for removing stumps?

That they are using greater quantities every year?

That they do the work themselves?

If you have done no stump blasting it must be because you do not know how easy it is to use

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

Our book, "Better Farming with Atlas Farm Powder," tells you all you need to know about all kinds of farm blasting. It shows how to prepare the charges. It tells how to load them under the stumps. It explains how to fire them. Anyone can use Atlas Farm Powder. Mark the coupon, get the book. Then you will be ready to go out and blast stumps without trouble or risk.

Dealers everywhere can get Atlas Farm Powder for you. Insist upon having Atlas, The Original Farm Powder. It is made especially so it will be safe. It does its work cheaper and better than ordinary explosives.

Good Grain and Short-horn Show

La Crosse Interstate Fair Draws Good Crowd and in Many Ways Is Best Fair Management Has Ever Held—By T. H. Campion.

FAVORED with a week of ideal fair weather the 1917 Interstate Fair at La Crosse broke all records for attendance. Thursday more than 20,000 people passed through the turnstiles. Not only in the matter of attendance was this fair a record breaker, but it was without doubt the best fair the management has ever staged. The exhibits throughout were splendid. While numbers may have been lacking in some departments, the quality was good. The racing was the best racing program seen outside of the state fairs this year. While an unusually large pike was in operation, the shows were of such a nature as not to offend. Good free attractions were provided, and a day at this fair was well spent.

As usual at La Crosse the display of farm grains and corn was immense. Potatoes and garden products showed up well, as did the township booths. The fruit show was strong, plenty of competition being evident. Here the fruit growers of Minnesota and Wisconsin have a chance to compete and Minnesota generally gets the better of the argument, Webster, of La Crescent, being the big winner this year.

The poultry department was the crowded department this year. Close to 1,800 birds were on exhibition. Roberts, of Ft. Atkinson, and Hoyt, of Whitewater, had a big list of entries.

The live stock exhibit was light in some departments, particularly the dairy cattle. The Short-horns were out in numbers, 165 head being shown. Competition was keen and no one herd had everything its own way. Carpenter & Carpenter got championship on cow and Herr Bros. & Reynolds on bull, being awarded junior and grand championship on their senior yearling. The only competition among the dairy herds was for the silver cup offered by the chamber of commerce of La Crosse for the best dairy cow shown. This trophy was won by a three-year-old Holstein heifer, owned by John Vanderploeg, La Crosse, Wisconsin. She well deserved the place given her, being a splendid individual.

The swine department was probably the best balanced of any of the live stock department. Five breeds were well represented, but the Duroc men brought out the best show and the keenest competition. Atwater was the big winner, winning most of the championships and all the firsts in the district futurity classes. J. D. McDonald got everything he went after in the Poland classes. Derenthal showed a good herd of big-type Chesters. The La Crosse county school brought out a splendid herd of Hampshires, and Whitmore Bros. represented the Berks with a good herd.

Atwater, showing Jack Orion, won the chamber of commerce silver cup for the best boar under one year, all breeds competing.

E. A. Jones, of Rockland, Wisconsin, showing a string of twenty-two Clydesdales, was the big noise in the horse department. Conrad Richards, showing a typey Belgian stallion, won sweepstakes for the best draft stallion.

There was a very fine display of automobiles of all the prominent makes ranging from the roadster up to the seven-passenger cars and limousines. This exhibit was housed in a tent along with the display of accessories. Sec. C. S. Van Auken paid the automobile a tribute when he said, "An idea of what the automobile is doing to build up the attendance at the La Crosse fair may be gleaned from the fact that there are 3,000 machines sold every year in a territory within fifty miles of this city. People residing in the rural communities find their greatest enjoyment in taking trips in their cars to view attractions in nearby places. As the Interstate Fair is the greatest attraction of the year in this community, they naturally come to La Crosse in the greatest numbers. No longer do fairs have to depend upon special trains and half-fare rates to draw crowds. The people come in their own machines, stay as long as they please, and go home when they choose. Every officer of the La Crosse fair takes his hat off to the automobile as the greatest fair booster in these times, although the trains are still helping greatly to bring outsiders to the exposition."

While the display of farm machinery was not up to the other years in number of exhibitors, the various kinds of farm machines were well represented. Much interest was shown in power machines for the home, also a great interest was manifested in milking machines. Tractors came in for their share of publicity and it was regretted by many that but one make of machine was shown.

La Crosse is ideally located for an agricultural fair and this year's exhibit proved that the fair under favorable conditions can be made a big success. We prophesy a bright future for this institution.

In And Around Wisconsin.

A crop of potatoes was raised this year by the pupils of the Withee school on the school grounds. They harvested 140 bushels, which were sold at 85 cents per bushel. The money will be used for school purposes. The land was plowed free and implements were donated by patrons of the school.

The first farm-loan association in Dunn county, Wisconsin, under the new Federal Farm Loan Act was organized at a meeting held at Stout Institute recently. Ben A. Faast, of Eau Claire, vice president of the Federal Farm Loan Bank, of St. Paul, Minnesota, was present and addressed the farmers on the subject of rural credits. Application has been made for $37,000 in loans and it is expected that others will join and materially increase this amount.

A carload of cattle was recently shipped from Washburn, Bayfield county, Wisconsin, to the Farmers' Cooperative Packing Plant at New Richmond. This was the first shipment from Bayfield county to this plant. It is understood there will be several other carloads during the fall and winter. Washburn has a branch shipping association connected with the New Richmond plant and other similar associations are located throughout Upper Wisconsin.

F. J. Sievers, for several years superintendent of the Milwaukee County School of Agriculture, was recently appointed as head of the department of soils, Washington State College of Agriculture. Mr. Sievers served several years ago on the staff of the soils department of the Wisconsin College of Agriculture, of which he is a graduate. C. E. Fawcett, of the Racine County School of Agriculture, is now in charge of the Milwaukee county school and Earl A. Polley has succeeded Mr. Fawcett at Racine.

Reports come from most sections of the Wisconsin tobacco-growing area to the effect that the weather was favorable throughout September. Ideal conditions prevail for curing down the early harvest portions of the crop. Frost did a little damage. However, late tobacco as a whole has done very well. A few fields in the vicinity of Viroqua were damaged to some extent by the frost. Regardless of this damage the 1917 crop will probably bring in more cash than any crop in the last ten years.

The experiment station of University Farm, St. Paul, Minnesota, for the past three years has been conducting feed experiments in the raising of fall pigs under fairly favorable conditions only, including the entire litters, runts and all. R. C. Ashby, in charge of the swine division at the University Farm, has been in charge of these experiments and gives the following report:

Beginning weight per pig...	39.4 lbs.
Final weight per pig...	181.15 lbs.
Daily gain per pig.....	.99 lbs.
Grain required for 100 lbs. gain	458.00 lbs.
Pork produced per 56 lbs. grain fed	12.22 lbs.

In all 146 pigs were started on these feeding tests and 137 were marketed. Eight of the fourteen lots fed were self-fed, all feeds being dry. Three different rations were tried. The percentages of the ingredients consumed were as follows

1. Shelled corn, 81.47 per cent; shorts, 11.11 per cent; tankage, 7.42 per cent.
2. Ground barley, 81.45 per cent; shorts, 12.55 per cent; tankage, 5.99 per cent.
3. Shelled corn, 60.10 per cent; ground barley, 23.52 per cent, shorts, 9.07 per cent.

Summing up Mr. Ashby says that under Minnesota conditions the net cost of pork is higher with fall pigs than with spring pigs, though many factors affect the results. The margin of profit is not large, but it is reasonably safe. With good shelter and water available twenty-four hours a day, fall pigs will do well. The important facts are dry, comfortable beds, water above the freezing point whenever wanted, freedom from parasites and all the feed the pigs can use. More rapid gains can readily be secured by the use of skim milk or buttermilk. Whether these will be cheaper depends upon the relative costs of all the feeds used.

The Wisconsin Library Commission at Madison furnishes boxes of books called "traveling libraries" to groups of new settlers, and even to single families, under some circumstances. The library commission will, upon payment of postage, send any book by parcel post to any citizen of Wisconsin if he will write a letter, enclosing from 6 to 8 cents in stamps, postage depending upon whether or not the postoffice is within 150 miles of Madison. The title of the book wanted should be given, or at least the subject discussed.

Harlo J. Fisk, formerly manager of the Pabst Stock Farm, recently purchased about 100 head of pure-bred Holstein cattle in Dodge and Jefferson counties. The purchase was made for the federal government. Mr. Fisk is superintendent and principal of the vocational school for prisoners at Ft. Leavenworth, Kansas. It is reported that the minimum price paid for cattle which will go to the Ft. Leavenworth herd was $275, and that prices range from that amount to $1,000. All the animals purchased were cows or heifers except two herd sires.

The food administration has figured that the allies to provide normal consumption will have to import this year 577 million bushels of wheat and 674 million bushels of other cereals. If North America is to supply this demand her normal export supply must be multiplied about twenty times.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word per insertion. See page 12.

WHEN you trim your outfit down to military bedrock, W-B Cut Chewing scores a bull's-eye. A soldier gets more from his pouch of W-B than from a bulky ordinary plug—rich leaf plump full of sap, *all* tobacco satisfaction, every shred of it. And the water-proof pouch keeps it clean and fresh in the pocket of his khaki.

Made by WEYMAN-BRUTON COMPANY, 1107 Broadway, New York City

Pony Puzzle

Count the Dots and Win a Prize

Here is a Shetland pony covered with dots. By being careful any boy or girl can count the dots on this pony. If you can do this we will send you as a prize, a packet of five beautiful embossed postcards lithographed in rich colors, and also a certificate for 1500 Free Votes in our grand contest for a beautiful Shetland Pony. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

Beautiful Pony Given

Remember the pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in this great contest. In case of a tie for the pony one will be sent to each person so tied. Full particulars by return mail.

THE PONY MAN Dept. 22 3 Des Moines, Iowa

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Meet Him at Atwater's Boar Sale.

IF you want to meet any of the prominent Duroc Jersey breeders of Wisconsin and Minnesota attend the Atwater boar sale at Bangor, Wisconsin, Wednesday, October 17th. They are all there on that day, those that don't want boars go anyway just to "meet the boys" and those that want the real good boars go because Atwater raises the good ones. We expect to see the largest crowd ever on Atwater's beautiful farm. L. F. is selling a lot of boars that any breeder might well be proud of. They have been well grown, yet not overdone and look to be real herd-heading prospects. He has a grand variety of the most popular blood lines, and no matter what line of breeding you may have in your herd, we feel safe in saying that boars will be sold in this sale that will not conflict with anything you have. Take for instance the get of Proud Chief Jr. He is by Cherry Chief out of a Proud Col. dam. Some of you may have some Model King breeding, but if you have you know it is good stuff. We think Model King was the best breeding boar Atwater has had since Marion's Wonder. The older his get becomes, the better they are. His other boars have not had the chance as yet, that Model King had. No one ever gets too much of Crimson Wonder Again-H. A.'s Queen breeding, consequently P. S. Wonder stuff will sell without any urging. For the particular breeder that wants a future herd boar that will put his owner "on the map" he will be interested in Investor Jr., a son of Investor, a year old last April and "some boar." One of the kind that will get big, and his pigs are great, having those high backs with a lot of stretch. Here is one of the best prospects ever sold in an auction sale. Then there are the Investor spring pigs out of the Lady Top Notcher sow, and there are some good ones in this litter that will make boars worth owning. Dreadnaught boars are going to be the favorites of many and there are sure some good boars from this litter being sold. This boar was by Illustrator. Remember that all of the Atwater show boars (spring) sell in this sale. The gilts are real attractions and if you want to buy a gilt to grow out and raise your own brood sow, buy one of these open gilts and take care of her—she will make you money. If you have not received a catalog, get one at once. Perhaps some can't attend this sale and for their benefit you can send your bids to T. P. Shreve in care of Mr. Atwater. Your business will be handled in an honorable manner. Mention The Wisconsin Farmer when writing. See page 31.—Adv.

King Defender to New Home.

KING DEFENDER, the grand champion Duroc Jersey boar at the Wisconsin State Fair in 1916, has been sold by John L. Fisher, of Janesville, to J. D. Gant, of Delavan, Wis. King Defender is said to be the largest boar of this breed ever shown at this state fair, for he actually weighed right at 1,000 pounds. Mr. Gant has been searching for a boar for some time and we do not believe that he made any mistake when he purchased King Defender. This boar has never had an opportunity to show what he can do as a sire to any great extent. Mr. Fisher's best pigs are by him, but he was unfortunate in losing so many of his pigs early in the spring. In the Gant herd King Defender will be mated to some very good, well-bred sows and the feature of his winter sale will be sows bred to this good boar. Some are of the opinion that King Defender's pedigree is "cold blooded," but we wish to correct that idea. His sire, Ohio King, was by Albany Again, he by the well-known Albany, a popular show and breeding boar in his day. The dam of Ohio King was Cherry Chief's Girl by Cherry Chief. The dam of King Defender was by Defiance, he by Defender. It is true that King Defender is removed two times from Cherry Chief and old Defender, but every one can't have sons of the noted boars. Don't stand back a minute on account of the pedigree. See page 30.—Adv.

Nathan Dickinson & Son, Lake Geneva, Wis.

WHEN we visited the Dickinson Holstein herd several weeks ago we looked over a number of cows on test, including Iowana Mooie, that had been on test five days, giving about 80 pounds of 4.05 per cent milk a day; also Jettine, a 19.08-pound cow on retest, which was going at a clip which would greatly increase this record. The junior member of the firm, Boyd Dickinson, informed us that they had about 25 cows coming in this winter which they intended to put on A. R. O. work; most of this number will be two year olds and the cows in the herd which have not as yet completed yearly records. See page 29.—Adv.

Dobson & Eastman.

NO firm of Poland China breeders in Wisconsin is better known than Burlie Dobson and L. D. Eastman, Lancaster, Wis. They have shown swine of this breed for several years and have a following enjoyed by no other breeders in the state. Their Polands are immune and if you want a spring boar that will do you some good, write them. It is safe to order by mail from this firm. If you do not like the boar when you receive him, just let Burlie know and an adjustment will be made satisfactory to you. Mention this publication. See page 30.—Adv.

Fond du Lac Holstein Sale Pavilion.

WHILE interviewing F. J. Bristol, at Oakfield the other evening at his home, we were informed in detail as to the progress which the Holstein Breeders' Sale Company have made with reference to erecting a Holstein sale pavilion at Fond du Lac. This company is capitalized at $25,000, and $16,000 worth of stock has already been placed throughout the country tributary to Fond du Lac. It is the purpose of the company to draw from 14 different counties, which gives a large and fertile territory for the support of this institution. It will be remembered by a number of Holstein breeders throughout the state that Mr. Bristol made quite an extensive trip through the East last spring with the idea of looking over the best constructed sale pavilions throughout the East. A careful study was, therefore, made of the pavilions at Syracuse and Brattleboro. In the main the Fond du Lac pavilion will resemble the one at Brattleboro, being 120 feet square and two stories across the front. The upper story will be used for a dining room and kitchen and a small dormitory. The dining room will accommodate 200 people. Offices will be situated in front on the first floor, which will facilitate the selling of large numbers of pure-bred cattle to good advantage. The building will be equipped with electric lights, sewerage and city water and will be so situated, having a 500-foot siding on the Janesville division of the Northwestern line, that the ordinary troubles connected with shipping in and out at sale times will be eliminated. Fond du Lac is admirably situated inasmuch as there are eight railroad lines representing three companies operating in this town. No doubt the city of Fond du Lac appreciated this fact and saw the future business which will undoubtedly come to the city as the result of this enterprise, prompting it to donate such an admirable building site to the Holstein Sale Company. The stockholders have had a recent meeting at which directors were elected, for the purpose of conducting the business of the company. Ground will be broken for the pavilion this fall and it is expected that the building will be completed for the spring sale which will be held May 1st. It is the dream of this company to hold at least four annual sales, two in the spring and two in the fall. Judging from the many good herds represented in this vast territory to be drawn on by the Holstein Breeders' Sale Company we have no doubt but what their dream will be realized in the near future.—Adv.

C. L. Turner's Holstein Herd to be Dispersed.

MR. TURNER, of Springfield, Wis., has decided to sell his herd at private sale which consists of five females, having 25 per cent the same blood as Duchess Skylark Ormsby; three half sisters of Sir Skylark De Kol Ormsby; two daughters of Sir Johanna Wayne, that has 50 per cent the same breeding as Segis Fayne Johanna, so that these heifers have 25 per cent the same breeding as the only 50-pound cow. Mr. Turner also has a granddaughter of Homestead Junior De Kol; two daughters of Canary Mercedes De Kol and two daughters from these cows bred to King Peter. It is evident from the breeding already given that this small herd is one of quality and that it represents much of the best blood of the breed and the fact that they are also known to be producers should make them attractive to buyers on the market for this class of stock.—Adv.

Gray at Mt. Hope.

A. L. GRAY, Mt. Hope, Grant county, Wis., is too well known as a Chester breeder to need much introduction. He has been in the "game" for a good many years and has sold many hogs of this breed. We have seen boars all over the state bred by Mr. Gray and they seem to give satisfaction. He can sitisfy you—Write him. See page 30.—Adv.

Marquart's High-Producing Short-horns.

DON'T forget that Marquart Bros., Milton Junction, Wis., have one of the best herds of milking Short-horns in the state and just at this time they have for sale a number of very choice young bulls. They are sired by a bull that has made good and out of cows that have made up to 10,000 pounds milk in a year. These bulls will not be on hand very long, so if you are interested in good milking Short-horns, write the above firm at once. See page 27.—Adv.

Carnation Stock Farms at Oconomowoc, Wis.

THE Carnation Stock Farms just sold a 26-pound son of Johanna McKinley Segis out of a daughter of King Ormsby to Dr. Powell at Oregon, Ill. Breeders wishing to own a son of Johanna McKinley Segis will have to hurry, as there are only a few of these calves left. It is the purpose of the Carnation Farms beginning with the first of November to start about 60 cows on A. R. O. work; most of them are daughters of Beauty Pietertje Prince. There are also some daughters of Johanna McKinley Segis and Sir Ormsby Hengerveld De Kol included in this number. We were also informed that several more granddaughters of Johanna McKinley Segis and Sir Ormsby Hengerveld De Kol are included in this number. We were also told that several more granddaughters of Beauty Pietertje Prince have recently distinguished themselves. For instance, Lady Hiske Walker at four years made 34.62 pounds butter in seven days and Miss Valley Mead De Kol Walker at three years just finished a record of 36.81 pounds. Another one of these granddaughters owned by A. G. Courtelyou has made a record of 34.55 pounds. We also wish to call the attention of our readers to the two aged herd bulls on the Carnation Stock Farms that are being offered for sale. First is Forward Prince Segis 125061, a 33.25-pound grandson of Hengerveld De Kol and De Kol 2d's Mutual Paul. This animal is nicely marked and is of such conformation as to make him a desirable herd bull, from the fact that he combines high production and good individuality. The other bull is Ollie Johanna Sir Fayne, a noted prize-winning bull that has stood at the head of the Western Carnation Stock Farm for several years, which is situated at Seattle, Wash. This bull is a 31.10-pound son of Ollie Watson Prima Donna, one of the best cows in the noted Iowana herd. In our opinion this animal is second as an individual to none in the state and we believe that breeders on the market for this class of a sire would do well to get in touch with the Carnation Stock Farm at Oconomowoc, Wis.—Adv.

NEXT WEEK'S SALE PROGRAM

Wednesday, October 17 { Poland Chinas, G. W. Owens, Lawler, Iowa. Duroc Jerseys, L. F. Atwater, Bangor, Wis.

Raise More Beef.

THE live stock press and the government bulletins are telling you of the great shortage of beef producing animals. Some of the pessimists may think this is only newspaper talk, but when good authorities tell you of the national shortage you cannot but think there is something to it. There never was a brighter outlook for the beef producer and now is the time to get a good bull of easy-fleshing qualities. The Angus is a premier beef breed, and if you are interested in this good breed of cattle, write Walter J. Steinhoff, secretary of the Grant County Aberdeen Angus Breeders' Association, Platteville, Wis. There are some 800 head of registered Angus cattle in Grant county and the above secretary can tell you who has bulls for sale and also where you can get a few good females. Any information you want, write Steinhoff. See page 31.—Adv.

Write Floyd Selck.

FLOYD SELCK, Hanover (near Janesville), Wis., is offering Durocs that cannot help but please you. His spring boars are big, rugged fellows that have been well grown, and are the kind that give satisfaction. These boars are sired by a yearling son of King Defender and he is a good boar, weighing 600 pounds and, by the way, since Mr. Selck cannot use this boar to good advantage, he is also for sale. If you see the pigs sired by him, you would want him in your herd. Here is an opportunity to buy a tried sire or some good spring pigs. Write him at once. See page 31.—Adv.

Make Money.

THE above is the heading of the Art G. Hoskins, Chester White advertisement and it's a certainty that if you buy a good boar this fall you will make money. This breeder has good hogs of this breed and we know that he will give you a good deal and you will get your money's worth. Art is a good feeder and will not ship out a poor pig. His address is Dodgeville. See page 30.—Adv.

Ft. Atkinson Durocs.

W. W. GOODRICH, Ft. Atkinson, Wis., can sell you Duroc boars or gilts worth the money. He cannot take care of a large herd, and, as he has some fall pigs now he wishes to sell his spring pigs just as soon as possible. For that reason he is making prices that will be inducements for men wanting hogs of this breed. Write him and please mention this journal. See page 31.—Adv.

Owens' Poland China Sale.

ON OCTOBER 17th, G. W. Owens, Lawler, Iowa, will sell 40 head of Poland Chinas, all of spring farrow, consisting of 17 boars and 23 gilts. They are the tops of Mr. Owens' spring crop this year and are of the type that will develop into very large hogs. A good portion of the offering is by the great herd boar, I Am Baron by Baron and out of Belle B. by A Wonder A. A few litters are by Blue Valley Jr. by Blue Valley Again, one of the leading boars of the South, and he by Blue Valley, Mr. Walker's noted boar. There is a litter of three boars and one gilt out of Blue Valley Jr. and Belle B. and one of these boars is the largest spring boar the writer has seen this year. They are from a litter of 16. An exceptional litter is by Big Price, the Minnesota and South Dakota champion, and out of a dam by King Expansion, he full brother to Again Expansion, the Nebraska champion of 1914. Another good litter is by Blue Valley Jr. and out of a Giantess gilt, coming from the famous Giantess family so well known in Page county. A fine litter is by I am Baron and out of an 800-pound sow. A splendid April litter is by I Am Baron and out of Big Lady by Owens' Giant by Black Big Bone. There are five extra good gilts by Blue Valley Jr. and out of Owens' Type, a full sister to Owens' Kind. There will be one boar and one gilt by I Am Baron and out of Nemo P. by King Giantess 2d, coming from the famous Giantess family. Mr. Owens has one of the best offerings to be sold in Iowa and he has this year raised the best crop of pigs, size, quality and breeding considered, that he has ever had on the farm. Mr. Owens is a splendid stockman and knows how to breed and develop high-class Poland Chinas. He has the class of pigs that will please the discriminating breeder and he offers to refund the railroad fare both ways to any man who attends his sale and is disappointed in the character of the Poland Chinas cataloged for this sale. We know he will have no fares to refund for the reason that every man present will be loud in his praise of the offering. If you cannot attend the sale send a bid to Mr. Owens, or to either of the auctioneers, in his care. See page 30 and when writing for a catalog kindly mention this paper.—Adv.

The Derenthal Chesters.

NO doubt many of our readers saw the Derenthal Chesters at Milwaukee and if so we feel that they were impressed with the size and stretch. We have called attention several times to the good backs found in this herd and that is certainly a very important point. This herd is full of champions or the get of champions and this feature is worth considering when you are buying breeding stock. If you get the individual backed up with ancestors that have been winners and producers of winners, that is to your advantage. It will pay you to write H. A. Derenthal, Wykoff, Minn., and get his prices and description. We recommend this herd.—Adv.

Knudson Guernseys.

ALLIC S. KNUDSON, Brodhead, Wis., has some young bulls of serviceable age now for sale. They are very well bred, being sired by a son of the noted cow, May Rilma, and the dams have A. R. records or are out of A. R. dams. This herd of Guernseys will please you and if you will ask Mr. Knudson for a description of the bulls he has for sale, you cannot help but be impressed. Individually, they are good. Durocs are also offered, either sex and they carry the very best line of breeding. Remember the name and address and write at once and please say you saw the advertisement in The Wisconsin Farmer. See page 29.—Adv.

Inter-County Holstein Sale.

FRANCIS DARCEY, secretary of the Inter-County Holstein Sale Company, has recently informed us that the prospects for their two-day sale, November 7th and 8th, are the brightest and that the quality of the animals consigned this fall will be much above that sold in their sales heretofore. We were also glad to know that their new sale pavilion, which is 192 feet long, will be completed in time for the sale. We would suggest that anyone wishing further information regarding this sale or the consignments, that they get in touch with Francis Darcey at once, whose address is Watertown, Wis.—Adv.

Jas. Derivan, Fox Lake, Wis.

JAS. DERIVAN is well known as a Poland China breeder, especially in the northern part of the state. He has sold hogs all over the state and we have yet to hear of an unsatisfied customer. He has good breeding in his herd and his prices are in keeping with quality. We gladly recommend this breeder of big-type Polands. See page 30.—Adv.

Jerseys at Stubley's.

SOME time ago we had a feature story in The Wisconsin Farmer relative to the good Jersey herd owned by Fred Stubley, Black Earth, Wis. No doubt many of our subscribers read

this article and are acquainted with the Stubley herd through that article. We simply want to refresh your memory, for if you want cattle of this breed write Stubley. See page 29.—Adv.

Milford Meadows Stock Farm's Lake Mills Consignment.

MR. BLAINE has decided to consign 11 head to the Lake Mills Sale, October 23d and 24th, which will be a credit to his herd and which will not be a disappointment to buyers accustomed to look for good stock consigned from the Milford Meadows Stock Farm. Included in this sale are as follows: Comedia Hengerveld Queen a 25.53-pound daughter of the Milk and Butter King and out of a granddaughter of Hengerveld De Kol. She is an exceptionally promising young cow and is bred to the 31-pound bull, Canary Fobes Bessie Homestead; Johanna Ormsby Wayne De Kol, having a 24.76-pound four year old record, that is a half sister to Windsor Sweet Butter Maid, 33.49 pounds, and sired by Sir Ormsby Johanna De Kol. She is bred to Canary Homestead Oak De Kol, a 29-pound sire, having a 25 A. R. O. daughter, including a junior two year old with a record of 22.82 pounds; Daisy Johanna Segis, a three-year-old daughter of Johanna McKinley Segis, and out of a granddaughter of Colantha Johanna Lad and Paul Beets De Kol. This is a fine, straight heifer, and one of the best bred females in the sale. She was bred March 22d to Canary Fobes Bessie Homestead; Eva Mercedes Colantha, an A. R. O granddaughter of Colantha Johanna Champion, out of a 24-pound four year-old granddaughter of Paul 2d's Paul De Kol No. 2. She was bred May 23d to Mutual Fobes Longfield De Kol. These are a sample of the animals to be found in the Milford Meadows Stock Farm consignment. There are also included two cows bred to Lillith King of Rock, a young bull that topped the last spring sale at Lake Mills at $1,500. He is a son of King Segis Pontiac, a bull that has sired more high-priced bulls than any other sire living or dead.—Adv.

Reed's Lake Mills Consignment.

MR. W. H. REED, Palymyra, Wis., is consigning to the Lake Mills Sale, October 23d and 24th, several head from his choice Salma family, which has made his herd conspicuous by reason of the high records which several of its members have made. For instance, Salma Gewina De Kol is a three times 30-pound cow and in three years 11 months 28 days produced the following records: 25.90, 30.21, 31.05 and 30.59. Her per cent of fat was over 4.25. We have always been impressed with the performance of this cow, not only as a producer, but as a reproducer, as she has six daughters to her credit, several of which have already shown their high-producing tendencies. One of these heifers, for instance, Salma Gewina De Kol Segis, has 21 pounds as a junior three-year-old bull and will be consigned to the sale. The most noted animal of Mr. Reed's consignment is, however, an eight-months-old bull calf, out of Salma Gewina De Kol. He is a fine individual, nicely marked, and should easily be one of the features of the sale. Mr. Reed has also consigned a nice heifer calf from Salma Gewina De Kol Segis, a granddaughter, therefore, of the famous old cow, Salma Gewina De Kol. The 31-pound bull calf and Salma Gewina De Kol Segis are brother and sister to Salma Gewina De Kol 2d, a 24.70 two-year-old daughter of the old 31-pound cow. It is rarely that buyers have an opportunity to purchase at public sale some of the choicest individuals from a breeder's choicest family. However, this is just what will be presented to the bidders at the Lake Mills Sale when Mr. Reed's consignment is brought into the ring.—Adv.

Fisher's Lake Mills Consignment.

MR. FISHER has decided to sell 11 head at the Lake Mills Sale—one aged cow, three yearling heifers, six coming yearling heifers and one bull calf. One of the heifers is by King Alcartra De Kol Pontiac, a 36-pound bull, and out of a 22-pound three-year-old daughter of King Peter, that has 33 A. R. O. daughters. Her second dam has a 27-pound record and her third dam has a 26-pound record. An outstanding yearling heifer that won 1st in her class at the Rock county and Watertown fairs and second at the Dane county and Wisconsin state fairs, will also be in the consignment. Seven head of Mr. Fisher's show herd will be listed, which has some significance when it is recalled that Mr. Fisher's show herd captured junior champion bull honors, four firsts, five seconds, two thirds and two fourths at the Wisconsin State Fair. All of these animals with the exception of two were bred by Mr. Fisher. The four-year-old cow consigned is bred to Juliana King Repeater, a well-known sire of good stuff. See advertisement on page 28.—Adv.

Kirkpatrick Bros.' Holstein Sale.

KIRKPATRICK BROS., Reedsburg, Wis., have just written to us that they have sold their former herd sire, King Pontiac Korndyke Champion, to the Sauk County Farm, where there is a herd of 25 pure breds and 50 head of high grades. Kirkpatrick Bros. have retained all of the daughters of this bull in their herd, which they expect to test; twelve of this number are expected to freshen this winter, which are now a good-looking bunch of prospects for A. R. O. work. See page 29.—Adv.

Don't Wait to Buy That Boar.

FOR the next few weeks many boars are going to change hands. There is a natural shortage of spring boars and if you wait until the last minute to buy your boars you are going to be disappointed, for you will have to take what is left. With the present price of pork, and there is no reason why it should get very much lower, it behooves you to use the best boar you can buy. The slogan this year is "buy early."—Adv.

Beveridge's Lake Mills Consignment.

AS HAS been his custom for a number of sales past, Mr. C. M. Beveridge, Lake Mills, has decided to consign quality rather than quantity. One of the two animals he is consigning is a 33-pound bull calf sired by Canary Fobes Bessie Homestead 101266, out of a 31-pound daughter of Homestead Junior De Kol. Canary Fobes Bessie Homestead has stood at the head of the Milford Meadows Stock Farm herd for several years, so that his daughters will have an excellent opportunity to further demonstrate his greatness as a sire. He already has nine A. R. O. daughters, including a 28.18-pound three year old that is practically a perfect individual as well as a high producer. The dam of Sir Ormsby Homestead Butter Boy, the 33-pound bull calf, is Windsor Sweet Butter Maid, the record cow of Wisconsin for her age, having produced 33.48 pounds at five years, 27.69 at four years, 24.67 at three years and 19.50 at 26 months. Besides having this matchless performance at the pail to her credit she is a beautiful individual and sired by Sir Ormsby Johanna De Kol and out of a daughter of Pontiac Butter Boy. It is evident, therefore, that this young 33-pound bull comes by his individuality honestly and that it is pretty nearly a certainty that he will breed true to type. Breeders looking for a choice young herd bull combining nearly perfect individuality, excellent A. R. O. backing and line breeding that represents as good, if not the best, which Wisconsin Holstein breeders have yet produced, should make a careful study of this calf. Mr. Beveridge is also consigning a choice 25-pound cow Minita Ormsby De Kol, a fine individual as well as a three-quarter sister of Windsor Sweet Butter Maid, due to freshen at sale time. The date for this sale is October 23d and 24th. See page 28.—Adv.

Brunker's Annual Boar Sale, October 24th.

R. F. BRUNKER & SON, Ridgeway, Wis., will hold their annual sale of Poland China boars at their farm five miles south of the above town, on Wednesday, October 24th. For this sale they have listed about 40 head, a dozen of which are yearlings and the balance spring boars of March and April farrow. The Brunkers have never done any extensive advertising or showing, yet they have been breeding Polands for a good many years and have sold boars that have made good. They do not expect to get exceedingly high prices for their boars, but only ask a fair profit over and above what they would be worth for pork. No doubt farmers and breeders that are going to want boars within the next week or two can find something that will suit them in this sale. The breeding is of the best big type and in next week's issue we will tell you about the boars these pigs are sired by. In the meantime write for one of the catalogs and see if there is anything in that that looks good to you. If you find it impossible to attend the sale and wish to send bids, send same to T. P. Shreve, of The Wisconsin Farmer, in care of Mr. Brunker. Write now for the catalog and please mention The Wisconsin Farmer. Ridgeway is in Iowa county, on the C. & N. W. R. R. west of Madison. See page 27.—Adv.

An Indoor Toilet.

IT IS no longer necessary to have sewer, cesspool or plumbing in the home in order to modernize it as to toilet accommodations. Chemists have perfected a chemical that dissolves human waste, kills disease germs, and makes the toilet sanitary and odorless. The Kaw-Near Cabinet Co., 555 Kaw-Near Bldg., Kansas City, Mo., manufactures this chemical, also a handsome oak cabinet that can be installed in any home at very little cost without sewer or plumbing. It has no odor, can be placed in any room, hall or closet, and costs only 1 cent a week per person to use. It prevents flies, filth and makes the cold, unhealthful outhouse unnecessary. Anyone interested in modernizing their home should write for the liberal free trial offer and literature. See page 12.—Adv.

Liberty Spring Polands.

LIBERTY SPRING FARM is owned and operated by L. D. Eastman, Lancaster, Wis., and he is founding a herd of Poland Chinas that will be a credit to the state and Grant county. Mr. Eastman has a nice lot of spring pigs and they have had the best of care and if you will order a pig from this man it must please you or there is no sale. We are glad to stand back of this herd and the breeder. Get quotations and please mention The Wisconsin Farmer. See page 30.—Adv.

The Good Herefords.

IF you are a lover of the "Whiteface" just take a trip to Grant county, Wis., and see the L. M. Scott & Sons herd at Bagley. If you want to see 90 head of choice Herefords, the Scotts will certainly be pleased to fill your wants. They have them and they are headed by outstanding herd bulls. We know of no better place in the state to send you if you are in the market for a bull of this breed. Write and mention The Wisconsin Farmer. See page 31.—Adv.

Ackerman in Grant County.

WM. F. ACKERMAN, Glen Haven, Wis., is one of those good Poland China breeders of Grant county. He is one of the good breeders and takes care of his hogs, consequently when you visit his place you will find his pigs in a good, thrifty condition. If you want that kind and sired by one of the best breeding boars ever used in the state, write Mr. Ackerman relative to his A.'s Big Orange boars. See page 30.—Adv.

ATTENTION
MR. DAIRYMAN

Are you interested in PURE-BRED GUERNSEYS?
If so, come to WAUKESHA, WISCONSIN,

OCT. 31 AND NOV. 1

and attend our Eleventh Semi-Annual Sale of

PURE-BRED GUERNSEYS

The Waukesha County Guernsey Breeders' Association have selected 75 head of the very choicest pure-bred Guernseys to be offered October 31st. From the standpoint of individuality, type and breeding, the offering of this sale surpasses anything yet placed in the ring by the Waukesha Association. Among this splendid collection will be found the following offerings: Advanced Registry cows with records as high as 696 pounds fat; daughters from cows that have records equally as large, some larger, and sired by sires of reputation such as Governor of the Chene, Lord Yeksa, Rhea's King of the May, Governor of Myrtle Place 2d, etc. A superb collection of young heifers have been consigned, a large number of which are bred and safe in calf to such sires as Florham Victor (a son of Ne Plus Ultra), Royal Rose King of Edgemoor Westmoreland Squire (a son of the famous Governor of the Chene), Dairymaid's Nonpareil of Iowa (whose dam has a record of 825 pounds of fat). Several males of special merit will be offered October 31st, one whose dam has a record of 717 lbs. fat, another 568 lbs. fat, etc. **November 1st** is the date of the grade and pure-bred male sale. Be on hand to buy some of these excellent individuals. You cannot go wrong by buying one of our bred-for-production bulls. Start a foundation herd with these grades and a pure-bred sire. About 60 grades will be sold and 25 males. Be one of the lucky purchasers. Remember the sale of **Red Cross Lady**, the beautiful Governor of the Chene heifer that will be sold October 31st, proceeds of which sale will go for Red Cross purposes. Auctioneers, Colonels Love, Baily, Benjamin, Hellen and Beaumont. Write for illustrated catalog to

BRUNKERS' ANNUAL FALL SALE OF

Select Poland China Boars

SALE TO BE HELD AT FARM 5 MILES SOUTH OF RIDGEWAY AND 4 MILES SOUTH OF THE LAKE TO RIVER AUTO ROAD

RIDGEWAY, WIS., WEDNESDAY, OCT. 24, '17

11 CHOICE YEARLINGS, 24 MARCH AND APRIL SPRING BOARS

OUR breeding stock came from some of the breed's most noted herds. Most of the boars are sired by Tom Mc 249359, a Big Tom bred boar. They have no wrinkles, no creases, but they are smooth with heavy bone. We don't expect exorbitant prices and we know you will get your money's worth. There are very few yearling boars in the country and if you want good, big, strong boars, attend this sale. We will not try to give the breeding in this limited space, our catalog gives that and we have one for you if you'll write for same. If you can't come to the sale, let T. P. Shreve, field man for The Wisconsin Farmer, buy one for you. We guarantee his selection to please you. Send bids in care of the sale. Don't forget the date and that you have a cordial invitation to attend this sale.

R. F. BRUNKER & SONS, Box 49, RIDGEWAY, Iowa Co., WIS.

Arrangements for Potato Show.

To the Editor:—On Friday, September 28th, all convention committees appointed in connection with the convention of the Wisconsin Potato Growers' Association met at the agricultural college. The executive committee of the State Potato Growers' Association submitted a report on the convention exhibit and on the convention program.

The following counties have now made definite entry for the state show: Barron, Burnett, Brown, Bayfield, Chippewa, Forest, La Crosse, Lincoln, Langlade, Marinette, Oconto, Oneida, Price, Portage, Rusk, Sawyer, Vilas, Waupaca, Waushara and Wood. There remain as yet six doubtful counties who may enter, bringing the total of counties in competition up to about twenty-five. This exceeds the early estimate of the state association.

The potato growers' association also discussed with local committees arrangements for the exhibit of machinery, equipment and supplies. Several manufacturers sent representatives to Madison.

It is evident the exhibit capacity of the large pavilion will be taxed to hold the many commercial exhibits now arranged for.

The state association is coöperating with the above twenty-five counties in the installation of the most attractive booth exhibits. Madison people will be able to see the finest in quality and most attractive agricultural exhibit ever shown in the state.

The state association is able to announce also unusual interest in surrounding states and it is now evident that large numbers of visitors outside of Wisconsin will be in attendance.

The state association now has on the press an illustrated circular containing complete announcement of the convention and exhibit features.

The following Madison committee met with the executive committee of the State Potato Growers' Association at the Park Hotel on Friday evening and discussed plans and convention arrangements: Burt Williams, chairman; Howard D. Piper, L. L. Olds and Julius Klueter. The Madison committee was very enthusiastic over the coming potato show and plans are now under way to secure full and complete coöperation from Madison and the southern section of the state.

J. G. Milward.

Poland China Sale at Lancaster.

The Grant county Poland China breeders held their second boar sale at Lancaster on October 2d and it was a decided success in every respect. It was one of the best lots of spring boars we have seen go through a sale ring this fall. They were well grown with good conformation. The top of the sale was consigned by Tommie Holmes and sold to Tarr Bros., New Auburn, Wis., for $142.50. He comes from the litter that Holmes won on at Milwaukee. The average made—$64.50—set a new record for a boar sale in the state of Wisconsin. The Grant county boys are trying to give Wisconsin Poland-Chinas that will be a credit to their breed. Many big-type boars of the very best breeding are being used in Grant county and those who have the idea that Grant county is a hot-bed for the little, medium-type kind, are mistaken. As mentioned above, the boys sold a good bunch of boars and were deserving of a good sale. With a couple of exceptions, the gilts were not as good as the boars. The good gilts are being retained for the sow sale, which will be held in Lancaster, February 7th. Ira Cottingham sold the offering in his usual manner. We follow with a list of those selling for $50 or over:

No. 1, H. J. Kettler, Platteville, Wis., $55; 2, J. H. Clayton, Belmont, Wis., $85; 3, David Bohl, Fennimore, Wis., $57.50; 4, Bert Keen, Lancaster, Wis., $57.50; 6, Wm. S. Williams, Dodgeville, Wis., $75; 7, L. N. Bunt, Platteville Wis., $87.50; G. B. Goke, Platteville, Wis., $72.50; 9, Tarr Bros., New Auburn, Wis., $142.50; 10, Fred Buchner, Spring Green, Wis., $95; 11, Wm. Clayton, Belmont, Wis., $67.50; 13, J. Knudson, Livingston, Wis., $55; 14, E. Vyverberg, Specht's Ferry, Ia., $57.50; 16, Walter J. Steinhoff, Platteville, Wis., $60; 17, D. McWilliams, Shullsburg, Wis., $82.50; 21, E. A. Cairns, Mt. Hope, Wis., $67.50; 22, O. H. Kettler, Platteville, Wis., $50; 24, Griswold Bros., Livingston, Wis., $100; 25, F. A. Morehouse, Lancaster, Wis., $80; 26, Jas. Derivan, Fox Lake, Wis., $67.50; 27, John Hillary, Darlington, Wis., $75; 29, Joe Huntington, Darlington, Wis., $52.50; 30, Wm. Brant, Fennimore, Wis., $62.50; 31, C. E. Tuffley, Boscobel, Wis., $50; 36, Aug. Doeringsfeld, Fennimore, Wis., $57.50; 37, Clay Knapp, Lancaster, Wis., $57.50; 39, Albert Henry, Lancaster, Wis., $82.50; 40, Tony Udelhofen, Lancaster, Wis., $52.50; 41, Geo. Wunderlin, Potosi, Wis., $62.50. Gilts: 12, G. A. Walker, Lancaster, Wis., $52.50; 19, Albert Henry, Lancaster, Wis., $75; 20, A. Beaumont, Belmont, Wis., $60; 38, J. Teasdale, Darlington, Wis., $50; 42, A. Beaumont, $60; 43, Ben Goke, Platteville, Wis., $62.50; 36 boars brought $2,320, average $64.50; 8 gilts brought $420, average $52.50.

THE MARKETS.

Union Stock Yards, Chicago, Oct. 6.—Declines which followed in the wake of last week's big marketing of cattle (a record week's supply in the aggregate around the market circuit), had the effect of curtailing receipts somewhat this week. This served to check declines and made possible some reaction in values, but the trade was handicapped by the temporary surplus of beef in packers' coolers which the preceding week's liberal runs provided and compared with the declines shown last week on most all classes the recovery has been slight. Given moderate receipts next week, however, the trade is expected to show a much better tone.

Receipts of cattle at Chicago the first five days this week total about 61,600 head, compared with 90,241 for the like period last week and 62,501 a year ago. Prime long-fed yearlings, the only class of cattle that failed to share in last week's vicissitude, are holding firm at the best prices of the year and last wek's $17.65 yearling cattle top has been repeated this week. Such offerings, however, represent less than one load in a thousand in current marketings and with top grades of handy and heavy weights are no criterion of the trade. There have been no heavy steers here this week good enough to sell above $17.40 and that kind are still at least 25 cents lower than the recent high spot. Outside the specialties, however, most of the native beef steers are now selling 10@20c higher than the bad close last week, but outside of the qualified kinds of thin and light-fleshed steers of stocker and feeder grade, there are few steers in native cattle marketings that do not still show declines ranging from 50c@$1.00 from the high time two weks ago, and good weight $12.00 to $15.00 grades are off more. Western range cattle, on the other hand, which are getting a decided preference from killers over grassy and warmed-up natives, are generally 25@50c higher than the close last week. Inasmuch as demand is exceptionally broad from all sources, there is every reason to expect that declines will be followed by curtailed receipts and quick recoveries and an upward tendency is expected to predominate during the balance of the season.

Despite a liberal proportion of butcher stuff in this week's moderate receipts of cattle, the trade shows a decisive reaction. Canners, cutters and common to medium heifers are fully 25c above last week's low time, while on the rank and file of the good to choice cows and heifers the market shows 40@50c advance, and everything is meeting with exceptionally good outlet, with the exception of the common to medium heifers, which are rather slow sale. The bull trade has also "come back," and last week's decline of 25@40c, which was mostly on the fat bulls, has been regained and the trade is again in very satisfactory shape. The calf trade also shows decided improvement and common to medium calves, which are in liberal supply, have recovered last week's 50@75c decline, while vealers which did not suffer much decline last week, are higher than ever, and choice light vealers are selling up to $16.

Good to choice classes of stock and feeding cattle are fully steady with a week ago and continue to get a broad, active demand. The more common stocker grades, however, are moving slowly. Good to choice 950@1,100-pound feeders are selling at $9.50@11.00, with high-bred fleshy kinds that command killer competition, selling as high as $12.50; medium to good feeders of the same weights are selling from $9@9.50 and fair to medium grades from $8@8.75. Good to choice 600@800-pound stockers are selling readily from $8.75@9.25, with selected kinds as high as $10; medium to good grades are in liberal supply and selling at $7.75@8.75; common to fair, $7.25@7.75, with off-colored, light-weight, little cattle of the dairy breeders from $5@6 per cwt. for canner purposes, according to the flesh they carry.

SOME LAKE MILLS CONSIGNMENTS

LAKE MILLS HOLSTEIN SALE OCTOBER 23-24

Beveridge's 33-Pound Bull

Sir Ormsby Homestead Butter Boy

is a handsome individual as shown by the illustration. Sire: **Canary Fobes Bessie Homestead (101266)** out of a 31-pound daughter of Homestead Jr. De Kol. Dam: **Windsor Sweet Butter Maid (174536)** 19.50 pounds at 26 months, 24.67 pounds at 3 years, 27.69 pounds at 4 years, and 33.48 pounds at 5 years. Has the largest record for her age of any cow in Wisconsin. She is by Sir Ormsby Johanna De Kol and out of a daughter of Pontiac Butter Boy. We are also consigning a 25-lb. cow, Minita Ormsby De Kol, a fine individual and a 3-4 sister of Windsor Sweet Butter Maid, due to freshen at sale time.

Look for field note in this issue for more detailed information concerning the 33-lb. bull calf.

C. M. Beveridge
Lake Mills Wis.

Hetts' Yearly Backing Consignment

John D. Hetts, of Fort Atkinson, Wis., is consigning some choice young stock from his high-producing herd, which has a semi-official yearly record that is hard to equal. **The average of all the yearly records made in this herd is 16,800 lbs. milk and 711 lbs. butter.**

Last spring Mr. Hetts consigned **Lilith King of Rock**, the beautiful 29-lb. son of King Segis Pontiac, that topped the sale at $1,500, and this fall he is consigning a **26-lb. son of King Segis Pontiac**, as well as another young bull whose three nearest dams average over 1,000 lbs. butter in a year.

John D. Hetts
Ft. Atkinson Wisconsin

Fisher's Consignment of Show Cattle

John L. Fisher, of Janesville, Wis., who exhibited the **junior champion bull** and took four firsts, five seconds, two thirds and two fourths at the Wisconsin State Fair this year, is consigning seven head of his show herd.

He is also consigning a fine daughter of **King Alcartra De Kol Pontiac**, a 36-lb. bull and a 22-lb. three-year-old daughter of King Peter, who has 33 A. R. O. daughters, including a 35-lb. cow.

Mr. Fisher is consigning an outstanding yearling show heifer and a four-year-old cow bred to Juliana King Repeater.

John L. Fisher
Janesville Wisconsin

Milford Meadows Stock Farm Consignment

Eleven head are consigned from our herd to the Lake Mills sale this fall, including **Comedia Hengerveld Queen (159027)**, a promising young cow with 25.53 lbs. at 4 years that is a granddaughter of The Milk and Butter King and bred to our 31-lb. herd sire, Canary Fobes Bessie Homestead.

Also **Johanna Ormsby Wayne De Kol (177756)**, 24.76 lbs. at 4 years, a daughter of Sir Ormsby Johanna De Kol and a half-sister to Windsor Sweet Butter Maid, 34.49 lbs.

Also **Nellie De Kol Artis 4th (169921)**, an A. R. O. show cow bred to our 31-lb. sire, and **Daisy Johanna Segis (276840)**, a three-year-old daughter of **Johanna McKinley Segis**, out of a granddaughter of Colantha Johanna Lad Paul Beets De Kol. This heifer is a splendid individual and one of the choicest things in the sale. She is bred to our 31-lb. sire.

Also **Eva Mercedes Colantha (164815)**, an A. R. O. granddaughter of Colantha Johanna Champion and bred to Mutual Fobes Longfield De Kol; **Aurora Ormsby Longfield (187282)**, an A. R. O. daughter of Longfield Sir De Kol, bred to the 31-lb. bull, and **Hettie Mercedes Homestead (137655)**, that has three A. R. O. daughters, including one with 31.17 lbs.

Our offering also comprises two daughters of **Canary Homestead Oak De Kol**, that has 25 A. R. O. daughters, one of them having 22.82 lbs. as a junior two year old; a daughter of **Canary Fobes Bessie Homestead**, that has a 28.18-lb. three-year-old daughter; and two cows bred to **Lilith King of Rock**, that topped last spring's Lake Mills sale at $1,500, a son of King Segis Pontiac.

Emmons Blaine, Prop.
Lake Mills -:- Wisconsin

Reed's Salma Consignment

We are consigning four of the best individuals from the choicest family in our herd. The 31-pound 8-months old bull calf out of our three times 30-pound cow, **Salma Gewina De Kol (126795)**, and sired by **Sir Korndyke Bess Pietertje (123100)** is the best bull we have ever bred. His dam made 25.90 lbs., 30.21 lbs., 31.05 lbs. and 30.59 lbs. in 3 years, 11 mo. and 28 days and has four heifers and a bull calf in the herd. His sire is out of a 22½-lb. 2-year old full sister of Bess Pietertje Ormsby Mercedes (33.15-lb. jr. 3 yr.) that is one of the greatest cows in the E. C. Schroeder herd. We are also consigning a 21-lb jr. 3-yr.-old daughter of Salma Gewina De Kol, 31.05 pounds and her heifer calf sired by Sir Korndyke Bess Pietertje. Also a bull calf from a 24.59-lb. 2-yr.-old half sister of the 31-lb. cow by same sire. See field note.

OFFERS FOR SALE a very well-bred bull calf by Dutchland Creamelle Denver Prince (165048) that is better than a grandson of Colantha Johanna Lad and out of Canary Ormsby Johanna De Kol, a 28-pound three year old, 111.95 pounds in 30 days, which is practically a perfect individual. Write for extended pedigree. Other bull calves out of A. R. O. dams by same sire for sale.

EMMONS BLAINE, Prop. Lake Mills, Wis.

We Do Not Claim the World's Record, But We Do Claim a World of Records

16,800 LBS. MILK AND 711 LBS. BUTTER represents the average semi-official yearly record for the many tests we have run, including two year olds as well as the other junior classes, up to mature cows. **Fannie L. De Kol**, one of our foundation cows, with 11 A. R. O. daughters, represents the high-producing qualities of our herd. Bull calves for sale at all times. Write or come and look them over for yourself.

JOHN D. HETTS Fort Atkinson, Wis.

HILLSIDE HOLSTEINS

WE HAVE TEN REGISTERED COWS for sale and one heifer. All cows have A. R. O. records but one; some due to freshen soon. Prices, $150 to $300. Extra large cows, good dairy type.

KIRKPATRICK BROS. Reedsburg, Wis.

Are playing an important part in the development of the Holstein Breed in America. There are over 300 head in this State Accredited herd.

We sell bull calves at a price ranging from $150 up. Send for list.

Considered from every angle PURE-BRED

HOLSTEINS

Are the Most Profitable Breed

They produce more milk and butterfat for less feed cost and less labor cost than any other breed. These facts are proven by comparison of statistics available on all pure-bred breeds. Write for information. It is free.

THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA, Box 143, Brattleboro, Vt.

Lake View Farm
Lake Mills, Wis.

OFFERS FOR SALE a son of a $6,800 Holstein bull that is a full brother in blood to a $50,000 bull. The dam of the calf for sale is a 16-lb. two year old, whose dam is a 24-lb. cow. Priced to sell.

FRED GURR Lake Mills, Wis.

HE'LL DO IT—Improve your herd with this young son of Sir Hengerveld Korndyke Ormsby, born May 27, '17. Sire, son of Pietertje Maid Ormsby, 35.56 butter, 7 days, and full brother to Miss Korndyke Maid Ormsby, butter, 365 days, 1,255.62; milk, 25,418.3 lbs. Dam a 11.35-lb. 2-yr.-old daughter King of the Blacks and Whites. Nicely marked and a good individual. Write for price, pedigree and photo. Walcowis Farms, N. Dickinson & Son, Lake Geneva, Wis.

RUST BROS.

OFFER the richly bred Holstein bull, Sir Isa Lotta Hengerveld 188663, born Aug. 18, 1915. Ready for service. His dam, Ida Lotta Hengerveld, at 3½ years made 21.34 lbs. of butter in 7 days, 31 days after calving. She is from a long line of heavy producing ancestors, records of her three nearest dams averaging 27.20 lbs. butter in 7 days. She has inherited this heavy producing ability, and transmits it. Sire of bull for sale is Daisy Johanna 5th, 1st prize two year old at Wisconsin State Fair, 1915. His dam has two A. R. O. daughters. Arthur Rust, West Allis, Wis.

POLAND CHINA SWINE.

OWENS' ANNUAL SALE OF BIG-TYPE, BIG-BONED AND PROLIFIC

POLAND CHINA SWINE

Lawler, Iowa, Wednesday, Oct. 17, '17

40 HEAD, 17 boars and 23 gilts of March and April farrow. They are the top of our spring crop, the best we have ever offered. They are the real 800 and 1,000 lb. kind and if you are looking for size, length, bone and prolificacy you will find it in this offering. The sows are in the very best of breeding order and will do the farrow good. The largest spring pig to sell this year for his age is by Blue Valley Jr., a John Miller and T. E. Walker-bred boar. His dam is Belle B., the dam of I Am Bacon, the largest hog in northern Iowa for his age. He is out of a litter of sixteen. Another good litter by Blue Valley Jr., and out of Owens' Kind. Miss Countess has a good litter by Blue Valley Jr., the best bred Giantess sow living. Nemo P. is a good litter by I Am Bacon. Big Lady has an extra good litter by I Am Bacon. You will find real herd boars in this offering. The best litter to sell this year is by Big Price and out of Lone Bacon. Big Price was the Minnesota and South Dakota grand champion boar. Auctioneers, Geo. Burgt, J. Z. Wells and S. E. Johnson. Write for a catalog, mentioning this paper. Address

G. W. OWENS **LAWLER, IOWA**

(Bred sow sale February 6th.)

FOR UALITY AND UANTITY WRITE

Boars and Gilts

POLANDS

SIRED by six noted herd boars out of sows that were sale toppers. Every one a big one and well grown. Let me describe what I have and you'll be convinced. Write

W.W. **UACKENBUSH (Jackson Co.) MELROSE, WIS.**

O. C. OLSON, STRUM, WIS.

IF YOU WANT TO BUY ANYTHING in big-type POLAND CHINAS write me. Have a large herd and can supply you with boars or gilts or matured sows. The pigs are sired by BIG TYPE JIM, a son of Jim Crow, and many of them are out of MAC'S CHIEF dams, the boar that was twice grand champion at Milwaukee.

BEST EVER

WE ARE GLAD to advise our old and new customers that we are offering the BEST POLAND SPRING BOARS we ever raised. Buy from the "fountain head."

WM. SMILEY & SONS Albany, Wis.

---

50 BIG-TYPE POLAND CHINA SPRING BOARS AT $40.00 EACH

Double treated, and we record them. They will be worth $40.00 on the market by the time you are ready for their service. Farrowed in last of February, March and April, the greatest lot of high-class pigs we have ever raised, long and deep bodied, heavy boned, nicely marked and good backs.

They are **from the most noted families of the great breed, sired by Giant Jumbo 2d, the 700-lb. year-old son of Giant Jumbo,** whose sire was the 1,055-lb. Mead's Halvor 1st; his dam sired by the 1,000-lb. and over Big Bone 2d, his grandam by Mouw's noted Big Jumbo. There is no bigger breeding. Others by **Long Expansion, a 900-lb. two year old, and Pawnee Wonder, a 1,000-lb. son of A Wonder.**

The dams are sows weighing from 600 to 800 lbs. and over, of the most intense big-type blood lines. **Buy your boar now and save from $20 to $50.** Boars will be high and scarce this fall.

Send your check right with the order, tell us the kind of a boar you want and we will send him or return your money. Come and see our herd. one of the **greatest in America,** as well as one of the most up-to-date, pure-bred stock breeding establishments.

I HAVE DUROCS TO SELL—Either sex, sired by a son of Detective Major (McKee), only boar in the state with this breeding. I guarantee to please.

DUROC BOARS

AND Scotch-topped Short-horn bulls for sale; bulls 10 to 15 months old. Duroc boars, $30.00, buys the best of them. **OAKWOOD STOCK FARM, J. D. Beetham, Lancaster, Wisconsin.**

STATEMENT OF THE OWNERSHIP, management, circulation, etc., required by the act of congress of August 24, 1912, of The Wisconsin Farmer, published weekly at Des Moines, Iowa, for October 1, 1917.

State of Iowa, County of Polk, ss.

Before me, a Notary Public, in and for the state and county aforesaid, personally appeared J. W. Wickham, who, having been duly sworn according to law, deposes and says that he is the Assistant Business Manager of The Wisconsin Farmer, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher—James M. Pierce, Des Moines, Iowa.
Editor—James Atkinson, Des Moines, Iowa.
Managing Editor—James Atkinson, Des Moines, Iowa.
Business Manager—James M. Pierce, Des Moines, Iowa.
Assist. Bus. Mgr.—J. W. Wickham, Des Moines, Iowa.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)

The Wisconsin Farmer Pub. Co.
James M. Pierce, Des Moines, Iowa.
Dante M. Pierce, Des Moines, Iowa.
Frank Dunning, Bedford, Iowa.
J. L. Parrish, Des Moines, Iowa.
R. L. Parrish, Des Moines, Iowa.
B. N. Wasser, Des Moines, Iowa.
J. H. Mather, Chicago, Ill.
R. S. Bibb, Kansas City, Mo.
J. C. Loehr, Lone Tree, Iowa.
F. S. Dunshee, Des Moines, Iowa.
I. M. Duffield, Des Moines, Iowa.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.)

Bankers Life Ass'n, Des Moines, Iowa.
Louisa Bird Hyde Estate, Des Moines, Iowa.
Equitable Life Ins. Co., Des Moines, Iowa.

J. W. WICKHAM,
Assist. Bus. Mgr.

Sworn to and subscribed before me this 1st day of October, 1917. M. M. LOWMAN.
(My commission expires July 4, 1918.)
(Seal.)

Actual Service Gives Leadership To Firestone SUPER CORD TIRES

WITH numerous makes of cord tires contesting, the past year has witnessed the sharpest rivalry for Tire Supremacy that motordom has ever known.

In this contest the Firestone Super Cord rightly came into its acknowledged leadership, rightly because of the construction which is designed to produce strength, durability and flexible action.

The body of the Firestone Super Cord Tire is built of walls of stout cord, each cord imbedded in pure gum, no two cords ever touching to cause friction. The cushion (which is under the tread to absorb shocks and protect the inner body) is a thick layer of pure gum; the tread is tough and thick. The beads which hold the tire in the rim are specially reinforced. The sidewall is also reinforced, giving extra strength against rim-cut and raising the bending point of the tire safely high. More mileage at less cost. Users of Firestone Cord Tires are getting the highest average mileage enjoyed by car owners.

That motorists find extra values in Firestone Tires is proved by the fact that our sales increased 72 per cent this year up to September 1. Our total business this year will exceed $60,000,000.

New Fabric Tire Features Suggested By Success Of CORD CONSTRUCTION

Firestone FABRIC TIRES

have benefited by every feature of cord tire construction which can be used to advantage. THICK, TOUGH TREAD gives longer surface wear. MORE RUBBER BETWEEN LAYERS. Added protection against internal friction and greater resiliency. THICK CUSHION STOCK. Still more resiliency, protection against tread separation and stone bruise. REINFORCEMENT IN SIDE WALL. Greater strength at the bead. Firestone dealers will show you a cross section of the newest output of FIRESTONE FABRIC TIRES, explaining the features that add more miles to Most Miles per Dollar.

THE WISCONSIN FARMER

VOL. XLVI. NO. 42. THURSDAY, OCTOBER 18, 1917. WHOLE NO. 1864

Grades Not Good Enough

Illustration at the left shows Bluebird Homestead Aaggie Model, aged five years, 24.88 pounds of butter and average of eighty-three pounds of milk or 581 pounds in seven days. This cow, by Fobes De Kol Homestead by Homestead P. De Kol, has three daughters and two sons. Illustration just beneath shows four generations, from left to right as follows: Hengerveld Model Aaggie Grace, 24.5 pounds of butter, six years, four daughters and two sons; Duchess Aaggie Grace, twenty-six pounds butter, five years, four daughters, two sons; Bluebird Canary Duchess, not tested, one daughter.

SID BIRD, Fond du Lac county, Wisconsin, figures that he has made three important changes for the better in his life. He changed from city to farm when he was 21; he changed from beef cattle to dairy cattle a few years later, and he changed from grade dairy stock to pure-bred Holsteins. Each step was carefully considered before it was taken and each has brought profit and satisfaction with it.

Though farm born, Mr. Bird never had the opportunity to learn farming during the time when it is most easily learned—in the growing years—for his folks left the farm when he was 10 years old. In the little town to which they moved, the position of clerk and manager of the store led the way to business life. However, at the age of 21, the business end did not appeal to Mr. Bird, and, looking at it from any angle, he could find nothing attractive in the prospect of being a city man forever.

Friends and relatives gave him just one year to become tired of farming and convinced of his unfitness for the work. Instead, however, Mr. Bird was so satisfied at the end of the twelve months that he purchased more live stock and went into debt some more. The first revenues came from poultry. This led to greater things—beef cattle. While the beef end was profitable it somehow or other did not satisfy.

A few more years of beef cattle and Mr. Bird sold the farm he had and moved to South Byron and switched to grade dairy cows. He knew now that he had found himself. From the first his ideas of improving the herd were sound. He purchased a registered Holstein sire. He ran his own tests once a month for every cow and weeded and culled until his herd was one of the best grade herds in the neighborhood. His average yield from each of the grade cows was 15,000 pounds of milk and a calf each year. But the results were not satisfactory even then. Calves from grades do not sell as well as pure breds. His business training made him able to see that more dollars would come his way if he could invest money in higher-priced stock.

Pure breds were the answer. He purchased four two-year-old heifers from a well-established dairying community in the East, and with these laid the foundation for his present excellent herd. One of the four was killed by lightning soon after dropping her calf, so no record could be made from her. The others now have records of 29.09 pounds, 28.03 pounds and 24.5 pounds of butter per week, respectively.

There are 150 acres of land in the farm seeded to corn, oats, rye, alfalfa and clover. Sometimes barley is sown for a nurse crop. Clover is sown with alfalfa, giving a yield of clover the first year and alfalfa for the following years. Sometimes clover is sown separately with timothy for hay during the first year and pasture the next.

In choosing his herd headers Mr. Bird is extremely careful to select for size and type. If an animal has these two points the pedigree is looked up. If this is satisfactory on both the dam's and the sire's side, Mr. Bird will buy. If any of the three points is lacking the others can hardly be good enough to make up the one that is lacking. Especial consideration is given to the length from the hip to the pin bones and the manner in which the thighs are arched. Plenty of room for the udder is only possible where the thighs are clean cut and well arched. These two points are so uniformly present in the individuals of all ages of Mr. Bird's herd that the visitor cannot help noticing it. Excellent herds of home-bred stock are few in number. But on this farm, nearly every animal on the place is home bred and raised. It is often more advisable to purchase than to breed. But where a man has bred five generations of high-producing cows and improved upon the stock he started with, it is always a good enough reason for taking pride in the accomplishment.

Only the sires that have type, size and a satisfactory pedigree find a home at Mound Prairie Stock Farm. Mooie's Ormsby Count, herd header for the grades, was sold when the pure breds came because his dams and grandams had no rec-

Upper Picture—Rear view of Sid Bird's dairy barn, Fond du Lac county, Wis. Lower picture—Hilda Ormsby Grace, age five years, 560 pounds of milk, twenty-six pounds butter. By Moore Ormsby Count, out of Piebe Ormsby Duchess, twenty-nine pounds. Three A. R. O. daughters, two not tested.

No. 8 Spiral Wide Spreader

Latest in International Harvester Spreaders!

WE have added the New No. 8 Spreader—Spiral Wide Spread, Light Draft—to the **Low Corn King** and **Low Cloverleaf** lines. We are in a position to suit exactly any regular farmer, whatever his previous spreader experience may have been.

Grasp an opportunity to study the features of the No. 8, the spreader for every average farm, the lightest draft spreader made. No. 8 has the famous International spiral wide spread that has thoroughly demonstrated its success as a wide-spreader for all-around use. In addition, the **Low Corn King** and **Low Cloverleaf** lines provide you with your choice of larger capacity spreaders, with the regular disk-wide-spread (well-known wherever spreaders are sold) or with the spiral spread on special order.

The New No. 8 Spiral Wide Spreader and other **Low Corn King** and **Low Cloverleaf** Spreaders will go onto thousands of farms before the close of the year. They are all light-draft, low-loading, easy-handling, built of steel—and satisfactory. We have an idea one of them would stand a good chance of going onto your farm if you were fully posted. At any rate it will pay you to write us for catalogues. Write the address below.

CURRENT EVENTS

THE national government is apparently doing all that it can to keep the price of foodstuffs and the necessities of life down to their present prices, so that they will not rise as the war progresses. The coal situation has already been handled and now a presidential proclamation has been issued compelling wholesale and retail dealers in most essential articles of diet to secure a government license, which will compel them to hold prices down to a set scale and not to elevate them at will to their own enrichment. Many small dealers are exempted, however, as also are farmers, who were especially excepted in the food control law. The commodities the sale of which is to be regulated by the government are as follows: Wheat, wheat flour. Rye, or rye flour. Barley, or barley flour. Oats, oat meal or rolled oats. Corn, corn grits, corn meal, hominy, corn flour, starch from corn, corn oil, corn sirup. Rice, rice flour. Dried beans. Pea seed or dried peas. Cottonseed, cottonseed oil, cottonseed meal. Peanut oil or peanut meal. Soy bean oil, soy bean meal, palm oil or copra oil. Oleomargarine, lard, lard substitutes, oleo oils or cooking fats. Milk, butter or cheese. Condensed, powdered or evaporated milk. Fresh, canned or cured beef, pork or mutton. Poultry or eggs. Fresh or frozen fish. Fresh fruit or vegetables. Canned peas, dried beans, tomatoes, corn, salmon or sardines. Dried prunes, apples, peaches or raisins. Sugar, sirups or molasses. Among the exceptions to those to whom the law applies are mentioned these: "Farmers, gardeners, coöperative associations of farmers or gardeners, including live stock farmers and other persons with respect to the products of any farm, garden or other land owned, leased, or cultivated by them." The government hopes by this licensing and price-fixing process to do away with suffering and hard times this winter and enable everybody to live at least as well as they have been accustomed to in the past.

WHILE Germany seems to be torn by internal political dissensions, and there is rumor of mutiny among German soldiers, the German troops on the western front continue to be pushed back by the British and French forces, which made good gains during the past week. These gains would undoubtedly have been larger had it not been for the extremely unfavorable weather, heavy rainfall interfering just as General Haig's troops were making the best gains of recent months. The difficulties under which the allied troops are laboring as they attempt to push the Germans out of northern France are shown by this report from the field of battle: "Shell holes had rapidly filled with water and ponds were to be seen in which a score of men might easily drown if they were unfortunate enough to fall down the slippery sides. Often a small pool of water covered a considerable shell hole. It seems inconceivable that men could work, much less fight over such ground. Yet the British soldiers and officers were carrying on steadily their operations. And in recent days they have often fought bitterly over just such territory as this. Yesterday's rain has turned the battle front into a quagmire and there could scarcely be more trying conditions for fighting. The soldiers encountered by the correspondent were cheerful notwithstanding the fact that they were drenched to the skin with the biting cold rain. At one place a number of men were singing lustily away at some popular song." Large numbers of German soldiers are being captured and the condition of the German troops is said to be lower than at any time since the outbreak of the war.

SOUTH AMERICAN countries are falling into line steadily with the United States and the anti-Teutonic allies. Argentine and Brazil severed diplomatic relations with Germany some time ago; last week Peru and Uruguay were added to the list. Peru broke because of the fact that a Peruvian ship had been sunk by the Germans. President Viera, of Uruguay, in his message to congress, declared that the Uruguayan government had not received any direct offense from Germany, but that it was necessary to espouse the cause of the defenders of justice, democracy and small nationalities. A British cruiser stopped an outward-bound Spanish steamship seven miles off the Uruguayan coast. The steamship was held up, it is supposed, in the belief that Count Karl von Luxburg, the former German minister to Argentina, who recently was given his passports, might be on board. One by one the nations of the earth are being mobilized against kaiserism until there are few countries the world over now which are not directly affected by the war.

WITH the adjournment of congress, a resume of this nation's war preparations was made, showing that much, indeed, has been accomplished. Today, after six months, more than a million men are in service. Millions more are registered for service, subject to call. Sixteen cantonment camps—cities each capable of housing 40,000 men—have been built at a cost of $150,000,000. Billions have been loaned the allies. There are now three times as many vessels in the navy as six months ago. The enlisted strength of the navy has increased from 64,680 to over 143,000 and other branches have increased from 300 to 500 per cent in personnel. Twenty naval training camps have been established and aircraft and projectile factories are being built. The airplane construction program assures the presence eventually of thousands of American aviators on European fronts. The shipping board has contracted for 433 ships already. Seized vessels are rapidly being put into service. Plans have been completed for three steel fabricating plants to cost $30,000,000. An operating department has been created sufficient to run 1,200 to 1,500 ships. Responding to international appeals for rapid ship construction on American ways, it is planned to build approximately 6,000,000 tons within the next eighteen months, and thereafter at least 6,000,000 tons a year. Railroads now are operating as one great system. Ships and troops are moving steadily from this side to France. This country today is spending approximately $2,000,000 an hour in all war expenditures. To meet these vast expenditures congress has authorized by tax and bond measures the raising of 20,000 million dollars.

THEODORE ROOSEVELT, speaking at a mass meeting in New York City, declared the only peace that will make the world safe for democracy must be based upon the complete overthrow of Germany and the dissolution of Austria and Turkey. Included in the program he outlined were a free Arabia and Armenia, Poland and Lithuania. "Continually we hear rumors of peace," he said. "I think the circulation of such rumors is injurious to America and to the cause of decency and democracy. We should make it clearly understood that the conduct of Germany has been such that we regard as enemies of mankind all people who would strive to bring about a peace based upon treating Germany, Austria and Turkey on the one hand, and the allies on the other, as standing on a footing of equality. The only peace that will make the world safe for democracy is a peace based upon complete overthrow of Germany and the dissolution of Austria and Turkey."

SWEDEN is in danger of being drawn into the war if she cuts off her trade with Germany, the special Swedish mission to the United States announces, but rather than take such risk she is prepared to endure sufferings and hardships. Declaring that the question of manufactured iron and iron ore exports to Germany is the stumbling block in the negotiations with this country for the release of commodities to Sweden, the mission gives details of these exports to show that Germany receives only a small percentage compared to the amount exported to the entente allies. Regarding iron ore exports, the statement says the Germans this year will receive about 2,000,000 tons less than they are entitled to under existing contracts, some of which were fifteen years old. It is asserted also that in 1911 a treaty was signed between Sweden and Germany, in which Sweden pledged herself not to make difficult or restrict iron ore exports to Germany. Sweden holds that this treaty cannot be broken without loss of self-respect and the respect of other nations.

WHETHER there will be a coal shortage in the United States this winter depends, Dr. H. A. Garfield, the fuel administrator, declared entirely on the extent of the demand, which has not been disclosed. "If our industrial development, from the war and other causes," said Dr. Garfield, "has grown beyond our 10 per cent increase in production over last year, then we must go short. We have no figures at hand to tell what that development has been." Dr. Garfield's statement was made in connection with an announcement of the lifting of the embargo on coal exports to Canada. Permission for shipments to go forward was given when it was found that they would not endanger the supply of the northwestern states. "This action was taken," it was announced, "because it is vital that Canada's war industries be kept going at full blast and in order that she may remain an effective ally of America in the war. The American Northwest will be properly supplied." Figures submitted to the fuel administration by the geologic survey, it was said, show that the United States is nearly a month ahead of last year's production at this time.

Tight concrete feeding floors effect a very large saving of fertility. It was found at one of the stations that the value of the manure from a 1,000-pound animal was $4.48 more in one year when the animal was kept on a good, tight floor than it was when left standing on earthen floors. This record was made not with one steer alone, but with fifty-eight steers. It is computed that the cost of concrete floor for one steer amounts to $4.50 so that the increase in the value of the manure alone would pay for the concrete floor, providing, of course, that the manure is taken to the field and used in the proper manner.

The Wisconsin Farmer

FAMILY CIRCLE TALKS
BY THE PUBLISHER

OUR DUTY TO OUR SOLDIER BOYS.

THERE are some things in connection with our war policies that are perfectly proper questions for argument and debate, but there are others which are not debatable. They are so self-evident that they are not open to question. One of them is the fact that those of us who are left at home should see to it that the families of the farmers who have been drafted into military service do not suffer.

It makes my heart fairly ache, as I read my daily mail, to learn of cases where farm families have been left in almost destitute circumstances because their head and their support has been called to the colors. I have often expressed my regret that the government has seen fit to further reduce our already too limited farm labor supply by drafting farmers for military service at this time, and every letter which I get telling of some big crop farmer, who must sell his live stock and close out his business, because he has been summoned for military duty, impresses on me anew the short-sighted national policy which I think the government is following. But at the same time, I know that, in the average case, the farmer's family will have sufficient to live on and that they will not want for the necessities of life while he is gone.

But there are many instances, especially in the families of farm hands and of young renters and, even more frequently, of laboring men in the cities and towns, where the family has acquired no surplus for a rainy day; where, no matter whether through poor management or indifference, they have led a hand-to-mouth existence, and the daily wages of the man is the sole support of the wife and children—perhaps of little babies. In such homes as these, absolute want for the bare necessities of life is staring them in the face and the wolves of cold and hunger are gnawing at the door. It is for such as they that my heart bleeds most.

General Plummer, who is the commanding officer at Camp Dodge, has called this matter to the attention of the councils of national defense in grain-belt states whose sons are preparing to do their bit for their country at various camps. As I happen to be a member of one of these bodies, I have had the privilege of seeing his clear-cut, plain statement of facts, such as one would expect an officer of his eminence and experience to write. It reads as follows:

Dear Sir:—A large number of letters are being received at these headquarters from the wives of drafted men, which indicate that many families are being left in a destitute condition. We are unable to release these men, under present conditions; and we are equally unable to determine how serious are the real conditions in these homes. It would be a great help to us if your state council of defense would appoint a responsible person, in each county of the state, to whom we could refer such cases for investigation and relief. We would like to have on file a list of such representatives of your organization by counties, with their addresses. Such relief as is given must for the present be local. Until these men are released from military service or congress shall arrange for a dependent allowance, the committees from which these men come will have to take care of them. But these people really in need should not be allowed to suffer. Contentment at home is just as necessary as contentment at camp if the morale of the men is to be kept at a high point. Your organization can perform a splendid patriotic service by enlisting the forces of the states, which are sending men here, to investigate and relieve all legitimate cases of need among the families of the men of the national army.

Very truly yours, E. H. PLUMMER,
Major-General Commanding.

I cannot understand how congress could have adjourned without making ample preparation for meeting just such unfortunate conditions as General Plummer describes, but I *can* understand fully that what he says about contentment at home being just as essential as contentment at camp, if the spirit and morale of our soldier boys are to be maintained at par. My friends, it is our duty—nay, it is our high privilege—to fulfill the obligation which congress should have discharged for the whole country. It is an individual responsibility that we have and we must meet it, no matter what the cost. These young soldier boys who are to be the backbone of our national army, are fighting your battles and mine; they are the defenders of our families and our firesides; they are the protectors of our herds and our farms. I can think of no form of ingratitude more base, no slacker more contemptible, than one who would let them sacrifice and suffer without doing everything in his power to relieve the worries and sufferings of those whom they have left behind.

I wish that every reader of my papers would consider himself a committee of one to investigate conditions in his community, among the families of those who have gone into the army; for, as General Plummer has pointed out, this service must, for the present, be a community one, until congress wakes up and does its duty by the boys in khaki and their families. Then if any reader finds cases of dire need and want in his community, which are not being properly relieved by local help, and will report them to me I will personally see to it that the matter is called to the attention of their state council of national defense and do everything in my power to provide relief. Tonight, in scores of thousands of farm homes throughout the grain belt, where these words will be read, families will sit down to a warm meal that would delight the appetite of the richest in the land. They will be warmly clothed and the whole house will hold comfort and cheer for every member of the family. When the family circle breaks up it will be to go to clean beds to sleep the sleep of comfort, if not of absolute luxury. Perhaps there will be an empty chair at the table and around the reading lamp, because of the absence of one who is doing his duty for his flag and country at some distant army camp. But he, too, will roll up in his army blanket with pleasant thoughts of home, knowing that although he is missed in the daily farm work and around the fireside, all is well with the home folks he left behind.

But there is another side to that picture, my friends. In many a home over this broad and fertile grain belt, mothers and little children will go hungry and cold to bed, weeping for the support of their husband and father, or their brother, who tramps a lonely beat on guard duty or tosses sleeplessly on his hard bunk, torn with the anguish of the thought that, because he is doing his duty, innocent loved ones at home are suffering. That man, my friends, is not a stranger to you and to me. He is our friend, our comrade, our brother, by whose sacrifices we shall live to enjoy our comforts and our prosperity.

Let us think of this tonight and start out tomorrow, resolving that we will do our part and not only give to Liberty Loans and Red Cross funds—for they must not be neglected—but give and give and give till it hurts, to keep that man's family from want and privation. And let us not give as one rendering charity; let us not contribute grudgingly, as one performing an unpleasant duty. But let us give as one meeting the high privilege of paying just a little interest on a debt of obligation, whose principal we can never hope to discharge, no matter how hard we try.

A TAX UPON US ALL

THE war revenue bill which congress passed and the president signed last week imposes a tax upon every one of my readers, even the little ones who tug at their mothers' skirts and are too young to understand what is told them. We must all do "our bit" to make up the billions of dollars which Uncle Sam needs to carry on the war.

I cannot go into the new tax law in all its details, for they are innumerable. It will have to suffice to mention a few of the more important and the more frequently encountered taxes. To begin with, on and after November 2d we shall all of us have to affix a three-cent stamp to a letter instead of a two, as we have done for years; moreover, postcards will demand a two-cent stamp instead of a one, as heretofore. I doubt if there is another provision of the new law which will affect more people of farms, towns and cities alike than this. We all of us write letters; we must all of us pay Uncle Sam more for taking them to their destination. I sincerely hope that this 50 per cent increase in postage will not cut down the personal letters from my readers to any degree whatever. There is no portion of my daily labors which I enjoy more than the opening and reading of the hundreds of subscribers' letters which come to me every day. Save your pennies for the increased postage, but write to me as often and as voluminously as you have in the past.

After the first day of November we will all of us have to pay a tax on railroad tickets, telephone and telegraph messages and premiums on new insurance policies. For telephone and telegraph messages costing over fifteen cents, a war tax of five cents is to be added. When we buy a railroad ticket to Chicago or Milwaukee, or even to the next town, we shall be obliged to pay the regular fare to the railroad company and eight per cent of the ticket's cost to Uncle Sam as a war tax. When we go to a theater in town we will be taxed one-tenth of the cost of the ticket for a revenue stamp; that is, in all cases, as I understand it, except moving picture houses, the proprietors of which have thus far shown an intention of paying the tax themselves rather than assessing it to their patrons.

After the first of December we will be obliged to affix a revenue stamp to express and parcel post shipments. And so on and on. Second-class postal rates (those which apply to newspapers and magazines) are to be greatly advanced (in some cases being made from four to eight times higher than now) on July 1, 1918, unless congress can be brought to see the error of its ways at the forthcoming winter session. All along the line of life and work (from the talcum powder which the mother uses on her infant, to the coffin in which we are buried) we will find the war tax looming up, causing us to dig down deep into our pockets.

We are in the thick of the greatest war the world has ever known, a war which is costing us many millions of dollars a day. The debt must be met somehow; Uncle Sam proposes to raise about one-half of it by taxes and the other half by bonds. These taxes will fall as heavily upon the farmer as the city man, but we must all of us remember that we are Americans first, last and all the time, and meet the duty of the hour in the big, frank, manly way it should be met.

SHALL THE FARMER BUILD NOW?

THE daily mail presents an interesting study to me. It brings me the opinion of many men and women on divers matters; it causes new subjects to arise in my mind and old ones to take on renewed interest; it is a never-fading kaleidoscope of views and reviews. But, in a larger sense, it is far more than all this; its greatest value is that it enables me to keep in close personal touch with my million-strong army of farm readers, and that, I take it, is the real test of successful journalism. No man can give sound, practical advice, week after week, year after year, who isolates himself from those he advises, who does not know what they think and feel, to what degree they can practice what he preaches. Therefore, the immense, incalculable value of the daily mail to me.

Sometimes the letters are so directly related, as they come to my desk, it is hard to realize it is merely a coincidence. One correspondent will commend me on something I have written and the next letter I open takes issue with me on the selfsame subject. One correspondent asks a question, the next letter presents an answer to that very question. And so on and on. Seldom, however, have two letters in the same mail been more closely connected than two which came to me one day this week on the highly important question of farm building. I was going through the letters (as is my custom) one by one, without regard to their possible contents. In the course of my reading this letter turned up, unsigned, save by the general name of "A Farmer and His Family," but so interesting I must break my rule against printing anonymous communications and give it to you, exactly as it came to me:

Tonganoxie, Kansas, October 1, 1917. Dear Mr. Pierce: What do you think of the advisability of building during these war times? We have been making extensive improvements on our farm during the last eighteen months and had just gotten ready for the last and most important, our house, when war was declared. What do you think of the advisability of our continuing our plans? We would be hard hit by the great increase in the price of all building materials, but we could manage it. We can live without the new house, but we need it badly. We are not so young as we used to be and we feel we ought to be getting the good out of a new house if we are ever going to build. We have been planning for this house for a great many years and never saw our way clear to build before. I am sure there are other farmers who will be interested in your answer. Will you please give it in your interesting department of personal views?

I was formulating my ideas on this very interesting subject as I picked up the next letter. Would you believe it, this letter gave the answer to the very question my Kansas correspondent asked, an answer which went further than any mere opinion of mine could have gone, for it gave facts and figures available only to the trade. The letter was written to me by the vice president of one of the largest retail lumber and building material firms in the grain belt and reads as follows:

Dear Mr. Pierce: The present time offers one of the greatest business opportunities for building ever known in farming districts, but it depends entirely on the farmer whether he takes advantage of these opportunities. Thus far, I regret to say, the farmer has not shown any great desire to build. In fact, it

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES.

BY JAMES M. PIERCE

JAMES ATKINSON, EDITOR-IN-CHIEF

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter.

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address
THE WISCONSIN FARMER, Madison, Wisconsin

Wisconsin Seed Corn Situation.

Silos have been a salvation this year to a greater extent even than 1915 which still is well remembered by corn-belt farmers. One authority estimates that at least 50 per cent of all corn grown in Wisconsin will be siloed. The number of silos in the state has been greatly increased this year. There are now about 60,000 to 65,000 of these food houses in the state. Thousands of others have been erected in the months just passed. In general, the Wisconsin farmers are not seriously affected by the failure of corn to mature.

But there is always the question of seed for the coming year. What will we do to make sure of a crop next year? Wisconsin has been saving seed corn for the last three weeks and will continue the work until every farm is assured of a supply of seed for the 1918 crop.

At the head of the drive for a supply of good seed corn is Prof. R. A. Moore, of the College of Agriculture, and the 2,000 farmer members of the Wisconsin Order of Experiment Stations. For the greater part, the members do not await a request to harvest seed corn. The most of them know seed corn is essential and they are the first in the field, gathering the likely ears and drying them for seed purposes in attic or kitchen or seed house.

Besides the association workers, there are the county agents and emergency food agents, one to each county. These agents hold meetings in every township where good seed corn is procurable. They show what methods have been found to be the most efficient for harvesting seed corn and they call attention to the good and poor types of ears as determined by years of trials with seed corn at the experiment stations.

This year Professor Moore has enlisted the services of another party of workers and no doubt the results will show that his choice was a wise one. The school children will be appealed to through their teachers to gather all seed corn not yet selected on the home farm. Every district has one or more fields which have not been hit by the frost. Professor Moore says seed corn will be high. Any of the standard varieties cured and shelled will bring at least $5 a bushel and, where sold in the car, much more. Mr. Moore has written each county superintendent of schools a letter in which he says in part:

The Wisconsin corn crop is gradually reaching the seventy-five-million mark, and we are becoming recognized as one of the leading pure-bred corn states from the standpoint of yield per acre. Unfortunately, this year the cold summer and early frosts have been instrumental in killing a large portion of the corn of our state. We are threatened with the loss of much of our pure-bred corn which it has taken eighteen years' time to breed and disseminate. Through active efforts put forth by all concerned we will still be able to cure sufficient seed to supply all needs. Unless, however, we strike at once, and strike good and hard, our farmers will be obliged to plant southern-grown corn. At the present time in the state there are certain localities within each county where the frost has not yet taken the corn. All corn that has been harvested and put in shocks when husked will be found to contain good, sound seed ears. A great deal of maturing goes on after the corn is shocked. If farmers would only save at husking time these good, sound ears and cure the same in a drying room they would help materially in solving this great question of seed corn for the coming year's crop.

If the young people in the schools could be interested in this subject at the present time I know they would be helpful in saving a goodly amount of this corn. Even though a boy could save but ten bushels, it would mean at least $50 for him. If you could get out a letter at once to your teachers, having them make a statement to their schools in regard to the corn situation to the effect that any boy or girl who would save corn would be placed on a list and this list could be sent to the superintendent, who would turn it over to the secretary of the Experiment Association, he would then practically be assured that a sale would be found for his corn and the purchaser referred direct to him. It will be necessary to state the kind of corn. There will be sale for the common corn as well as the pure-bred varieties.

Immature corn will make good seed when selected before serious injury from frost has taken place. The corn in the shock may still be soft, but it must be dented. If hung in a room with plenty of ventilation and some heat, especially at night, the corn will dry out rapidly and after three weeks the heat can be discontinued. Overheating while the corn is moist is injurious to the corn. After the moisture has been expelled the corn should be hung in a dry room and unless completely dried it should not be exposed to zero weather. The College of Agriculture has found that the only proper places for curing seed corn are special corn-curing houses, kitchens, attics, furnace room, and any dry and well-ventilated room. Poor places are sides of buildings, windmills, fences, stables, bins of grain in granaries and all poorly-ventilated places.

Defending the Farmers of Wisconsin.

There was held recently in Madison a meeting of Badger citizens who represented the county councils of defense in a number of Wisconsin counties. An address of Geo. A. Buckstaff, of Oshkosh, Winnebago county, a former speaker of the Wisconsin assembly, is worthy of more than passing notice. Mr. Buckstaff is quoted as having said the following:

The farmer has come into his own and if a few of them at times are bumptious and unreasonable, what class of people is there in the United States justified in throwing the first stone?

But I would like to say a few words at this time on the question of production. In the mechanical industries, it has been found that the way to speed up production is to make it more profitable to the producer, both employer and employe to do so. Farmers are human, in fact more human perhaps, than a considerable portion of our city dwellers. To get more food production by the farmer, we must make it more profitable for him. That means extra money for extra effort, more money for hired help, and better conditions of living that he may compete in the labor market for the best class of labor. We must do less complaining at the high prices paid the farmer for his crop.

For those prices are brought about by world food shortage. The whole world is bidding for our food production while never before as a general proposition has the farmer marketed his crops except on a local market overflowing with food and a surplus exported in competition with all the world.

We have all had our ups and downs. If the farmer is up, let's rejoice that his prosperity means victory to the cause of democracy and better conditions for the farmer that can never be taken from him.

War times have always brought high prices. It is a peculiar thing that some people will rail more against 25 cents added to the normal price of a bushel of potatoes than they will against $2 or $3 added to the normal price of a pair of shoes. As this speaker has said, the government in war times offers inducements to practically every class of producer in order to stimulate production. In no industry in the country has there been greater necessity of "speeding up" on production than there has been in the agricultural industry. Is it fair to say that we will offer additional compensation to practically every line of industry in order to stimulate production and then turn around and insist that the farmer shall not have any higher price no matter how hard he works? Labor has been scarce for government work and the government has been willing to pay higher prices for labor and extra high prices for extra hours Labor is scarce on the farm and the farmer and his sons and wife and daughters are obliged to put in many additional hours to do extra-hard work. Is it any more than fair that they should have additional pay?

The farmer is not asking any more than any other class of workers are asking and up to date he has not been getting as much. We are told that the supply of various products is short and hence the price must be raised. In the same breath we learn that the supply of farm produce is short. This being the case, why in the name of heaven should not the prices on farm produce also advance?

The Wisconsin Farmer has maintained and still maintains that the price of farm produce in most instances has raised less in proportion than the price on practically everything the farmer has to buy. Of course, the farmer has a wonderful advantage in that he does not have to buy as many things as the non-producers have to buy. All the farmer asks and expects is a fair deal. If the country is to be wonderfully prosperous because of tremendous war orders, why kick about the farmer being wonderfully prosperous and why object to him getting a price for his produce commensurate to supply and demand?

Wisconsin People Still Wasteful.

In a recent issue of The Wisconsin Farmer we made the statement that the people of this state (and the same statement could be applied to every other state in the Union) had not yet begun to save. By this we mean they have in only a small way eliminated the tremendous waste which in the eyes of farmers in European countries makes us appear almost profligate. Our attention has been called to the writings of R. E. Roethe, of Grant county, quite well known in Badgerdom as the "walking" member of the general assembly. Mr. Roethe writes as follows:

Yes, sir, thousands of bushels of apples have gone to waste in Grant county this year—and so have, or will, also thousands of bushels of crabs, wild gooseberries, wild blackberries, wild plums, wild grapes, elderberries, hazel nuts, hickory nuts, butter nuts, walnuts. We know—because in our tramps through the fields and woods we have come across them—unpicked, ungathered lying on the ground, rotting, going to waste, of use to nobody. Just seems a shame! Why not utilize your autos in gathering up these supplies? The American people will have to learn to stop this awful waste in everything! You wouldn't believe it would you, that the uncut hay this year in this country would feed five hundred head of horses during the winter? Or that the grain that the binders could not secure because it was down so bad, and left there in the fields to rot, was enough to fill the biggest elevator in Minneapolis? Contrast this with conditions over in Europe where women and children gleaners carefully gather up every straw left remaining on the ground.

If enough hay is wasted in Grant county to keep 500 head of horses over the winter, what shall we say of the total amount wasted in seventy-one counties? Whatever portion of any crop may still be left unharvested should be gathered and it should be picked up slick and clean. Let us hope that the war will teach us not only to "farm the fence corners," but harvest the crop in the fence corners.

Yields Cut Down by Frosts.

Part of our Wisconsin 1917 crop, whereby the state expected to eclipse all previous records of crop yields, was curtailed by the frosts of September 11th and 12th. The government crop reporter at Madison, who works in coöperation with the Wisconsin Department of Agriculture, has estimated that the frosts caused a loss of over 15,000,000 bushels of corn. In an ordinary season we would have had a wonderful corn crop this year, but unfortunately the season was late. The frost was not earlier than usual and if the season had been normal the injury to the corn crop would have been small. Most of the corn will be raised in southern and central portions of the state and in some parts the crop was good. With our 60,000 silos in Wisconsin but little of the damaged corn will be lost.

About 14 per cent of the potatoes of the state were damaged by the same frosts. However, the estimated production is still nearly 58,000,000 bushels, which will be the largest potato crop that Wisconsin has ever had and will be worth, based on present market prices and prices a year ago, from $15,000,000 to $16,000,000 more than the 1916 crop.

The hay crop in the state is short a few thousand tons, but at present prices compared with those of a year ago, it is worth nearly $15,000,000 more money than the 1916 crop.

Wisconsin made a good gain in spring wheat this year, the total value of the crop raised being nearly $4,000,000 more than that of 1916.

The Badger barley crop is 1,800,000 bushels more than that of 1916 and the rye crop 1,215,000 more.

The tobacco crop has fallen off 3,500,000 pounds, according to the latest estimates, but the average price of 17 cents per pound for all grades of tobacco, including some slightly damaged by frost, is the highest average ever received for any tobacco crop raised in the state.

The frost damaged field beans and buckwheat and cut down the yield of late garden crops. In some of the northern counties the frosts seriously damaged a very large per cent of the corn.

Based on October 1, 1916, and October 1, 1917, prices for the crops raised in the respective years it is apparent that the 1917 crop is worth $50,000,000 or $60,000,000 more than the 1916 crop. This is exclusive of the added earnings of dairying, which many estimate at $25,000,000 and is also exclusive of the added earnings on farms in Wisconsin this year due to the increased prices on live stock. In brief, our crops would have been worth probably $15,000,000 more if we had not had the frosts, but we have done mighty well as it is.

Steel Prices and Farm Implement Values.

It is a well-known fact that implement manufacturers during the last year have had difficulty in obtaining a sufficient supply of materials to maintain normal production. A painstaking investigation made by The Wisconsin Farmer last April indicated that on the whole manufacturers would fall 25 per cent short in their output because of lack of materials. There is reason to believe that this record has not been exceeded. Under ordinary conditions there are 100,000 harvesters and binders sold annually and 80,000 corn planters. Plows, cultivators, wagons, harrows and implements of this class are manufactured and sold in like proportion, so that the farmer is vitally interested in implement prices because of the huge sum that he invests annually. In addition to the shortage in the supply of steel which manufacturers encountered they were obliged to buy steel products at an enormous increase in price. When the war broke out in 1914 bar steel and pig iron were low in price and many manufacturers had large stocks on hand so that they were able to keep down the price of implements until the spring of 1916. In most instances the advance in the price of implements did not take place for a period of six months after the advance in steel prices, so that purchasers, in most cases, obtained the advantage of contracts made for materials at lower than current prices.

Recently the government has taken a hand and as a result of its action an erroneous notion that implements will be cheaper has been spread broadcast over the land. There has been no reduction made in the price of steel products used by implement manufacturers. In 1914 steel bars sold for $23 per ton and the government has now fixed the price at $58 per ton. Steel shapes were worth $24 a ton before the war and the government's price on these is $60 a ton. Pig iron sold then for $13 a ton and its value is now fixed by the government at $33 a ton. These prices will prevail until the first of January next. The materials in farm implements that will be sold for spring delivery were purchased anywhere from six to ten months ago, so that there can be no reduction in price on account of any change in values of raw materials. Furthermore, when contracts were made last spring for materials to be used in the manufac-

Family Circle Talks by the Publisher

(Continued from page 3.)

is quite the other way. No matter what the general impression is, I am frank to say that the farmer is not building nowadays. He ought to build, because the price of building material, as compared with the price of farm products, is out of all proportions. Building material has advanced between 25 and 30 per cent; farm products have advanced, you know, probably 100 per cent. It only takes half the bushels of corn to build any sort of a building today that it took in 1914.

Here is the attitude of the farmer. He says to himself: "It's going to cost me a great deal more to build that house or barn or granary today than it is in a couple of years. I have been able to get along now and I'll just wait and save that money." He doesn't stop to think that when he does come to build, building material is going to be on pretty nearly as high a plane as to price, and the price he gets for his products is going to be very much decreased.

It seems to me that it would be a very opportune time for the farm papers that have the good of the country at heart, as well as the farmer, to advise in their editorials a "Build Now" campaign and state the facts honestly and squarely to the farmer. It is part of Hoover's conservation plan that the farmer should help store his products, so that all of the grain should not be put on the market at the same time, because the railroads cannot ship it and the warehouses cannot hold it. Therefore, it is up to the farmer to provide storage facilities on his own farm. Again, the hog house or the barn is the farmer's factory. It is his workshop. The present high prices of hogs and cattle necessitate decent, sanitary buildings. The small increased cost of these buildings can be more than made up in a year.

Won't you give this some thought and if you agree with me, give the subscribers of your papers your own ideas in your own original way?

With the subject thus forcibly brought to my attention I set to work, without delay, to figure the matter out from the farmer's standpoint. I am convinced in my own mind, as a result, that now is the time for the farmer to build, that he should delay as little as possible. Let me tell you why I have come to this conclusion.

I have before me, as I write, a picture of a comfortable, modern farmhouse, 28x36 feet in size, with full basement, two stories and a large front porch. In 1914 it took 1,774 bushels of corn to pay for the material in this house; today it requires only 679 bushels. Let me go still further. Three years ago this material cost the equivalent of 1,264 bushels of wheat, today only 556 bushels; three years ago it cost 3,000 bushels of oats, today only 1,940; three years ago it cost 2,340 bushels of barley, today only 1,086; three years ago it cost 1,641 bushels of rye, today only 823; three years ago it cost 148 hogs, today only 93. The price of farm products has advanced far beyond the price of building materials.

Let me cite another illustration, that of a good dairy barn, 52x48 feet in size. In 1914 it took forty-six hogs to pay for the material in this barn, today it takes only thirty hogs. How do I figure this? Let me show you. The builder advises me that in 1914 this barn cost the farmer $972 for materials, today it costs him $1,274, or $302 more. But in 1914 the average hog brought from $20.72 to $22.20, at $7.40 a hundred pounds; while today the average hog is bringing from $40.80 to $43.80, at $14.60 a hundred pounds. Figuring the maximum prices in both cases, forty-six hogs are bringing $2,014.80 today, where they brought only $1,021.20 in 1914. In other words, the forty-six hogs have increased in value $993.60, while the barn material cost has increased $302. The farmer can devote the same number of hogs to building this same barn today that he did in 1914 and still have $693.60 left over.

Let me go a bit further. In 1914 it required 1,567 bushels of sixty-cent corn to pay for the material in this barn; today, with old corn selling at $2 a bushel, it requires only 637 bushels. The same number of bushels sold now, as were required in 1914, will not only furnish the material for this barn at its increased cost, but will leave a balance for the farmer of $1,860. Now do you begin to see why I so heartily urge a building campaign for the farmer? Lumber and all building materials are high, that is true, but farm products are higher in proportion than building materials. I went to an old friend of mine, Mr. Fred W. Weitz, head of the firm of Charles Weitz's Sons, who was given the general contract, by the United States government, for building one of the sixteen big army camps of the nation, some 2,500 buildings altogether, erected at a cost of approximately $35,000,000. I asked Mr. Weitz especially as to the attitude of the lumbermen in the present crisis, as to whether they were meeting the situation in a big and patriotic manner, or whether they were attempting to hold up the government and the individual builder, as some are claiming. Here is what Mr. Weitz had to say:

Dear Mr. Pierce: In connection with lumber requirements for the sixteen national army cantonments, the prices at which the lumber was purchased was arranged for by the advisory board, under the supervision of Secretary of War Baker and three lumber associations, namely, the Southern Pine Lumber Association, the Douglas Fir Lumber Association and the Northern Hemlock Association, and the prices were invariably from $1 to $3 less than the prices at which the same association of shippers were furnishing lumber to the dealers in the near vicinity of the erection of the cantonments. This is evidence of magnanimity on the part of the lumber manufacturers and their loyalty to the government. Furthermore, the entire government order, amounting to 576,000,000 feet, although a tremendous order, does not amount to a great deal more than the amount of lumber annually exported to foreign countries previous to the war.

We have within the last ten days received orders from the war department for additional work at Camp Dodge requiring 2,000,000 to 3,000,000 feet of lumber, and the prices at which we are directed to purchase, and which have been agreed upon by the government and the lumber associations, are from 50 cents to $1.50 per thousand lower than the original purchases made in June of this year. The only reasons that I have as to why this lower price is made is because of the anticipated loss of export business during the next twelve-month period. As soon as the war is over this export business will pick up again and the prices of building materials are bound to rise then, because of the world-wide demand. In the meantime, much of the former export trade is being offset by the increased demands for army cantonments, such as we built for the government, and for troop quarters and Red Cross buildings in France. With the coming of peace and the resumption of our export business the price of all building materials is certain to rise. Any decline will be temporary at best, so that there is every reason for urging building now, especially for the farmer, rather than to wait in the hope of lower prices in the indefinite and far-distant future.

Very truly yours, FRED W. WEITZ.

I am going to investigate this subject still further within the next fortnight and shall give my readers the benefit of my research. This is a big, vital subject to all of us: Are we wasting money by building now, when prices seem high, or are we practicing poor economy by not building, now that farm products have advanced much more than building materials? Of course, there are other considerations: the happiness and health of loved ones, our own comfort, and so on and on. But from a purely dollars-and-cents standpoint I say, "Build now, or next spring at latest; to delay further is to lose money." Will those of you who have facts on the subject share them with us, so that together we may find out whether I am right or wrong? I know of nothing that we can discuss with more interest and profit as the winter settles down upon us and we begin to lay plans for the coming of another year of activity.

BUY A LIBERTY BOND.

I WANT to urge upon all my readers who can afford it that the next time they drive to town they call at their bank and either buy one of the new Liberty Bonds outright or sign the application card, pledging themselves to pay on the easy installment terms which the banks have arranged. The second Liberty Bond drive is on in full force throughout the entire country; it will come to an end a week from next Saturday. Therefore, no time must be lost.

The eyes of the world are upon America as we loan our money to Uncle Sam for the war. Especially are these eyes upon the farmers of the Middle West, for a direct appeal has been made to them to buy the new Liberty Bonds. Secretary McAdoo, head of the treasury department, was in the grain belt last week on a speaking tour. Here is the gist of the plea he made to farmers, urging them with all the power at his command to dig down deep into their pockets and buy to the very limit of their ability:

If we had submitted to the order of the German kaiser that we stop our trade with Great Britain, France, Belgium and Italy what would have happened? All the surplus of wheat of every farm in this state and every surplus bushel of grain on every farm in America would have found itself without a market. There would not have been sufficient demand at home to consume it. The Chicago wheat pit would have found itself in a panic; every farmer in this land who had wheat in his possession would have hastened to throw it upon the market, and, as the number of purchasers would have been insufficient to take the offerings, demoralization in prices would have set in. The price of wheat, instead of being $2 or $2.20 and $3 a bushel, as it has been, would have been probably 50 cents a bushel, or probably less. I want the farmers of this country to take a large part of this liberty loan. They can afford to do it. They have been benefited by the prosperity of this time as much as any other class, and I thank God they have benefited, because the farmer never has gotten any too much. But he has derived a proper benefit from the prosperity of the nation. He is as patriotic as any other class of people, but the value of these loans has not been brought to his attention.

The situation calls for prompt, determined and unanimous action. The national government is spending millions of dollars every twenty-four hours. So long as the war lasts, this expenditure is justified and must be continued. The money can only be raised in two ways: loans and taxes. The new war revenue bill (the important details of which I explain in another article this week) provides for raising approximately one-half of the war fund by means of taxes. One bond issue of $2,000,000,000 has already been subscribed by the people; the second issue of $3,000,000,000 must be subscribed, and oversubscribed, if the money upon which victory depends is raised, and raised in time. The farmer is not called upon alone to bear this burden. All classes of men are sharing it with him; the millionaire and the poor man, the white man and the black, men of all creeds and callings from ocean to ocean. But an especial appeal has been made to the farmer. I hope that appeal will not fall upon unhearing, unheeding ears.

You who have seen the fields upon which you labored bear fruit so abundantly, whose products of furrow and feed lot are bringing such good prices, who have enjoyed such exceptional opportunities to work with the certainty that nature would reward your labors and a just and stable government would protect you, who have seen the financial anchor of the nation in other times of stress and storm, shall this appeal for money be made in vain, at a time when men are giving of their life blood freely that the world may be saved for democracy, and truth and righteousness shall be enthroned over greed and tyranny? The Liberty Bond is only a "scrap of paper," such as the kaiser tore up when his troops invaded Belgium, but upon it depend the happiness, liberty and advancement of the world. Will you buy to the limit of your ability, buy until it hurts? Every dollar counts. I have seen it figured that the proceeds of one $50 Liberty Bond will purchase thirteen 13-pounder shells for destroying submarines; four 5-inch shells for the same purpose; one hundred pounds of smokeless powder; eighteen gas masks for a like number of soldiers at the front; enough coal to drive a destroyer one hundred and twenty miles; enough gasoline to drive a submarine destroyer one hundred and fifty miles; a sailor's uniform outfit; four months' subsistence for a soldier. All this for one acre of corn, an acre and a half of oats. Will you answer the call with a rattle of dollars, like the rattle of muskets in the hands of the embattled farmers at Lexington?

James M. Pierce

---

ture of implements prices were lower than those now fixed by the government. This being the case, it becomes apparent at once that the effect of government price-fixing can by no manner of means reduce implement prices. The result would be to increase prices were it not for the fact that the large manufacturing companies have fixed their prices on the basis of the value of materials purchased in the spring of 1917. Under these conditions, therefore, a serious blunder will be made by those who delay buying implements that are needed because of the belief that they will be cheaper later on.

Our desire at this time is to simply present to our readers the unadulterated truth, namely, that prices on steel products as fixed by the government are higher than those paid by manufacturers last spring. Crop production can be maintained or even increased if producers are farseeing enough to properly equip themselves with tillage, seeding and harvesting implements. The military draft has already reduced the farm labor supply and this will in many cases result in discarding certain types of implements and putting in their place larger types. The two-horse must give way to the four-horse outfit because it is possible by choosing implements carefully to greatly increase the number of acres handled by one man. No man can afford to waste his time in fighting weeds if he is not equipped with the most modern kind of tillage implement with which to do his fighting. The important thing is to raise a big crop. To be sure, it will cost more in 1918 to raise it than ever before, but high prices for farm products are assured. Even with the high price of implements it requires fewer bushels of grain to buy an implement than it did in 1914 so that, after all, the producer is in ideal shape to outline for himself a program of production that will even eclipse the splendid record of 1917.

Higher Price for Serum.

Due to increased cost of production, hog cholera serum, made by the state for the protection of Wisconsin droves against disease, has followed the upward trend of pork prices.

Notice of a 50 per cent advance in the price of hog cholera serum to the pork producers of Wisconsin has just been issued from the office of F. B. Hadley, agricultural experiment station veterinarian.

In making public this change in prices, which became effective on October 10th, Dr. Hadley says:

Due to the great increase in the cost and keep of swine for use in the manufacture of hog cholera serum and virus, it becomes necessary to raise the price of the serum to one and one-half cents a cubic centimeter. Virus will be furnished free as heretofore.

Legal authority for this action is carried in Chapter 458, Laws of 1917, which states that the regent of the university shall furnish the serum and vaccines necessary to immunize hogs against cholera, but shall be enabled to charge and collect for it at the actual cost of production.

With the present prices for pork close to $20 a hundred pounds, few farmers in the state will feel justified in discontinuing the use of the protective serum because of an advance in price. This form of live stock insurance, successful stockmen declare, is cheap at the price, even if the cost is somewhat more than when hogs sold for $7.

The agricultural experiment station is equipped with a new laboratory for the manufacture of serum, which makes it possible to turn out a strictly high-class product. Reports from farmers and veterinarians in nearly every county of the state show that in the hands of reasonably careful persons highly satisfactory results have been obtained following its use.

A sufficient supply of tested, highly-potent serum to meet the usual demands of this season is on hand.

National Swine Show

Grand champions at National Swine Show—No. 1, Swan's Duroc Jersey sow, Royal Critic; No. 2, Meharry's Poland China sow, Mc's Choice; No. 3, Boyer's Chester White boar, Prince Big Bone; No. 4, Brush's Berkshire boar, Baron Duke 201st.

NEVER before has the great American hog been held in so high esteem as at the present time. This esteem is directed to the common, everyday porker in the feed lot and pasture—the individual that is daily making the fat and the meat products for which the world is clamoring. If we are to bow to the feed-lot porker we must hold in special regard the pure-bred hog, because here we have the fountainhead of a mammoth industry. It is because the pure bred plays so important a part in the improvement of the porker that a great and useful work has been undertaken by the National Swine Growers' Association in the establishment of a national show. A beginning was made in Omaha in 1916 and the second event held in the same place October 3d to 10th eclipsed in many respects the record made a year ago. Not that the number of hogs was greatly increased, but, rather, that throughout all the classes in all the breeds there was a higher standard in quality and in real porcine merit. This year there were 1,460 hogs of all breeds in the pens as against 1,409 last year. The Hampshires led with 342 head and the Durocs took second place in numbers with 319 head. There were 281 Chester Whites in the pens this year and 246 Polands. The Berkshires numbered 182 and the Spotted Poland Chinas eighty. As there was no classification for Yorkshires but one herd was exhibited, but the owner, Mr. B. F. Davidson, of Menlo, Iowa, received many compliments on the superior character of his exhibit.

True it is that the number of entries at the National Show is eclipsed by some of the corn-belt state fairs and yet the National must be placed in a class by itself when viewed from the standpoint of quality. Every swine breeder knows that hundreds of sale hogs are in the state fair pens. These are not fitted for show, and breeders are simply using this legitimate means of disposing of their surplus stock. At the National there are no sale hogs to speak of, and practically every animal on exhibition is entered and shown. This year sixteen states were represented. Breeders from Colorado and California competed with those from Massachusetts and Kentucky, though, of course, the bulk of the entries came from Iowa, Nebraska, Illinois, Missouri and Kansas. The cream of the entries in all the leading fair circuits were in competition and well might it be said, as has been proved over and over again since the 1916 show, that a good rating at the National brings favorable attention and useful advertising to the breeder.

In most respects Omaha takes good care of the National, but there is still lacking, and it is a serious lack, a satisfactory judging pavilion. The small sale ring in the horse barns is but a makeshift whereby the judge often finds himself jostling with the crowd and with the herdsmen in searching for the good ones. The outside tent is but little better, as opportunity is not afforded for satisfactory inspection, nor is the arrangement fair to the judges. Should Omaha succeed in landing the third National Show the officers of the Swine Growers' Association should see to it that the show be located there only on condition that a satisfactory judging pavilion be erected. In this respect the National has entirely outgrown its clothes and it is unfair to exhibitors and to visitors to have the showing done under the conditions that prevailed last week. In cataloging the entries and in using the ring card system real progress was indicated and it was unfortunate that the numbering system was not carried out in the case of the Durocs and Berkshires. Where only exhibitors are allowed to enter the ring it is of great advantage if the visitor can have placed in his hands a catalog giving him the needed information about every entry. A start along right lines has been made and those in charge of the show this year were convinced that catalogs complete in every detail would be issued for the next show.

Much of the success of the National is due to the effort of the various breed associations through their officers. Mr. W. M. McFadden, president of the National Swine Growers' Association and secretary of the American Poland China Association, has spent much time in getting this show established. His work has been done with an eye single to swine improvement and he has succeeded in a marked degree in relegating to the rear the individual who proposed to use the National as a special means of bringing laurels to one particular breed over another. Sensible rivalry Mr. McFadden strongly commends so long as it leads to swine improvement, but a great show like the National can only succeed, in his opinion, when its officers serve with the purpose in view of working improvement in pure-bred hogs of all breeds. Through this means only will the common hog of the country become better adapted to the purpose for which he is raised. Breed superintendents were prepared to lead the strenuous life during the show, and they led it. Mr. R. J. Evans, secretary of the American Duroc Jersey Association, had charge of the reds. E. C. Stone, secretary of the Hampshire Breeders' Association, saw to it that the belted hog had a square deal, while F. F. Moore, secretary of the Chester White Record Association, safeguarded the interests of the Chesters and was responsible for the cataloging of the entries and for conspicuously dressing the attendants in charge. Mr. F. S. Springer, secretary of the American Berkshire Association, looked after Berkshire affairs, while C. E. Kurtz, president of the National Spotted Poland China Record Association, kept things in order for the Spotted Poland breeders. These various breed superintendents worked harmoniously with Mr. E. Z. Russell, general superintendent of the show, and, all in all, every event was carried through on time and in perfect order.

Holding the show over the second week proved to be a disappointing arrangement. As the Ak-Sar-Ben, the annual street fair, was to be in progress during the first four days of the show, it was hoped that the local crowd would swell the attendance and greatly increase the receipts. As it turned out, street fair visitors showed but little interest in the porker's welfare, and as a result the trailing out of the judging meant that breeders who inspected the work of the judges during the first part of the show had to remain almost a week to see the tasks completed. Hundreds of Poland China breeders were obliged to leave before the ribbons were tied on their favorite breed. This experience surely proves without further experimenting that all breeds should be judged simultaneously. Unjudged animals take on new interest from the standpoint of the visitor after the ribbons are tied and it may safely be assumed that breed superintendents in the future will see to it that all are given the same publicity.

A meeting of 500 swine breeders was addressed by Hon. Gifford Pinchot, assistant to Food Administrator Hoover, on the question of increasing swine production. There is, according to Mr. Pinchot, a decrease of 10 per cent in the number of swine in the United States at present, while to supply our allies with meats and animal fats an increase of 15 per cent is required—this over and above the normal supply. In round numbers, it will be necessary to increase the number of hogs 20,000,000 head, and in order to attain this desirable end Mr. Pinchot assured the stockmen that some sort of price-assurance plan would be worked out. While at the present time the food commission has no authority to fix prices on corn or meat products, it nevertheless has it within its power to grant conditional operating licenses to packers. Through this means it is hoped to make swine raising profitable during the period of the war regardless of the price of grain. As the selling price of hogs per hundred during the last ten years has been equal in value to 11.6 bushels of corn, it is the belief of stockmen generally that a ratio of 14 to 1 would be a sufficient incentive to greatly increase production. On this basis a 350-pound hog would afford a profit to the feeder over and above the cost of finishing him equivalent to the value of nine bushels of corn. At the meeting addressed by Mr. Pinchot the following resolutions were passed by unanimous vote.

To Honorable Herbert C. Hoover, United States Food Commissioner, Washington, D. C.

We, the members of the National Swine Growers' Association and other swine growers, in convention assembled at South Omaha, Neb., this 5th day of October, 1917, fully appreciate your calling on us in this national crisis for our advice and help, and we assure you of our hearty and patriotic support.

We fully appreciate the imperative need of an immediate and extraordinary increase in the production of live stock in this country, especially hogs, and to that end we respectfully make the following recommendations:

1. We endorse the methods for the increase of hogs and cattle as recommended to you on September 18, 1917, by "certain members of the live stock industry committee."

2. We endorse and join in the recommendations made to you by "representative swine growers of the corn belt in convention assembled at Waterloo, Iowa," on October 3, 1917.

3. In addition to our approval of the foregoing resolutions we desire to bring particularly to your attention the necessity for fixing im-

mediately in advance the prices of hogs for short periods at all principal live stock markets of the country, on the basis of cost of production during the entire feeding period plus a profit which will provide the necessary stimulant for the abnormal production desired and the need for making such prices effective.

4. There is grave danger that owing to the lack of definite information regarding the prices for live stock the whole campaign for increased production will prove a failure. We, therefore, cannot urge too strongly the necessity of prompt action on your part with definite assurances that remunerative prices will be paid.

5. And we further strongly recommend that the commission to be appointed to fix the corn and pounds of pork proportion, shall be largely composed of practical swine men.

An interesting departure in a new field was the students' judging contest. Five agricultural colleges sent teams which emerged from the work—Nebraska, first; Missouri, second; Iowa, third; Kansas, fourth, and South Dakota, fifth. It was worth much to the boys as prospective hog men. Ten classes were placed and reasons given upon five. Six hundred dollars were donated by Omaha business institutions furnishing a nice prize list. The high individual was Ira Hepperley, of Norfolk, Nebraska, with C. L. Moran, of the Iowa team, second. Thursday evening the students and their coaches, swine show officials and other interested persons banqueted at the Castle Hotel. It was a much-appreciated meeting and an entire success.

The swine breeders' banquet has apparently become a fixed feature of the National Show, and well it might, as there is no more effective means of unifying the various interests than to get men who represent those interests around the same banquet board. As the Duroc Jersey judging had been finished the first week, the great majority of Duroc breeders had returned to their homes and as a result the banquet was not so well attended as in 1916. Those who took part in the program received hearty applause as they repeatedly proclaimed the high purpose of the National Show to be the improvement of the so-called farmer's hog. Those speakers who made an appeal for increased production were cheered to the echo and convincing evidence was presented then and there that swine breeders are prepared to greatly increase production whether a price-fixing program is carried out or not.

Plans were formulated last week for placing the National Show on a new and broader basis by placing a paid secretary in charge of its affairs. Instead of having a few hundred members, the National Swine Growers' Association should have a membership of thousands, made up not wholly of pure-bred breeders, but including alike those who raise and finish market hogs. The mammoth swine-breeding industry needs an organization that fittingly represents it. Just now there is the question of price-fixing to be dealt with and yet we find the great body of hog producers throughout the country entirely unorganized. There should be some way by which they can be given a hearing and the plans that the National has in mind may ultimately bring about the desired end. Sooner or later we must in some big way undertake to stamp out swine tuberculosis, as it is now costing the swine breeders an annual loss of millions. There are scores of problems to be dealt with, and, in the opinion of the majority who were present last week, these can be handled effectively only by thorough organization.

A REPORT ON THE JUDGING.

Duroc Jerseys.—The red hogs grow better steadily as generations come and go. Nowhere can the progress of the breed be better studied than at the National show. Difference of type were as prominent this year as last, but fewer objections were heard to the long-bodied, late-maturing Ohio sort. Jackson won a lion's share of the money. A few of his hogs could well be strengthened in the pasterns, but they are uniformly high backed, growthy, smooth and free from wrinkles. The shorter-legged type fared no better in the awarding of ribbons than last year. Aged boars were headed by a low-down, big hog, Economy 2d. He lacks the trimness and quality of most of the boars below him. Cherry King Orion had many favorites and a vote of the ringside would likely have made him first. While not highly fitted he is championship timber. The senior yearling top is a light red, upstanding arched back fellow. Jackson's second is of the same kind. The grand championship came to the junior yearling, a

PAIGE

The Most Beautiful Car in America

The True Meaning of Economy

Webster defines economy as the "wise, careful administration of our affairs." Please note the word, *wise*. Also note that there is no reference to cheapness or frugality.

In this definition, you will find the proof that Webster was not merely a master of the English language, but a philosopher as well.

The cheap expenditures are never the wise ones. The near-wool clothing, the "marked down" shoes and the cut price harvesting machinery cost less to be sure—*in the beginning*.

But cheap clothing shrinks to boy's size in the first spring shower. The cheap shoes "wear out" after a few months of service and the cheap harvesting machinery fails you at the critical moments. So—in the long run—your cheap purchases become shockingly expensive.

And so it is with a motor car.

There are many cars that sell for less money than the Paige. We could readily build them ourselves if we considered that policy the best one. But we don't.

We firmly believe that Self-Respect, Comfort and Enduring Satisfaction have an actual market value. So we build those things into our product.

We take just a little more time—just a little more care in selecting materials—just a little more pride in our work. And the result is a *real* motor car—not a makeshift or compromise.

Unless we are greatly mistaken, the Paige "Six-39" is just the kind of car that *you* want. It costs $1330 and it is worth every penny of the price.

If you are truly Economical—truly wise and careful—it will be the car of your choice.

Essex "Six-55" 7-passenger $1775; Brooklands 4-passenger $1795; Linwood "Six-39" 5-passenger $1330; Glendale "Six-39" Chummy Roadster $1330; Dartmoor "Six-39" 2 or 3 passenger $1330. All Prices f. o. b. Detroit. No handsomer line of enclosed vehicles can be found on the market.

PAIGE-DETROIT MOTOR CAR COMPANY
207 McKinstry Avenue, Detroit, Michigan

Polarine THE PERFECT MOTOR OIL **For Correct Lubrication**

Any Make Car at Any Motor Speed or Temperature

UNDER driving conditions where temperature of cylinder walls ranges from 300 to 400 degrees Fahrenheit, the viscosity of Polarine is practically identical with the so called "heavy" oils.

One-half of the pleasure of touring lies in a confidence of your car running well.

Your car will always perform with a maximum of efficiency if you will pay attention to lubrication.

Give your car all the lubrication it will take. Oil is much cheaper than bearings.

Use Polarine and avoid scored cylinders, excessive carbon and burned-out bearings.

Use Polarine and add power and life to your motor.

Polarine reduces friction to a minimum and enables your engine to deliver its maximum of power.

Order a barrel or half barrel today. It costs less that way than in smaller quantities.

Standard Oil Company (Indiana) **72 W. Adams St., Chicago, U.S.A.**

"I Never Saw Corn Grow So Well"

This is what a South Dakota farmer, formerly a resident of Iowa writes. After seven years' experience he tells of his successful start and now established prosperity. His advice to those seeking to better their condition is—

"Come to South Dakota"

1916 government statistics show how the state is gaining in farm wealth—corn yielded 90,800,000 bu., wheat 25,011,000 bu., and other grains in proportion. The value of live stock production was $63,113,000.00.

South Dakota, while long on wealth, is short on people. More farmers are needed to develop her uncultivated fertile acres lying west of the Missouri river. Land costs are reasonable and large crops are assured.

When Writing to Advertisers Please Mention The Wisconsin Farmer

big, smooth, clean-boned, growthy pig. Jackson's senior pig was of the same type, but not so good on his feet. Wellendorf showed a smooth, good-footed, growthy pig for second. He could stand more flesh. Junior pigs were a strong class, the largest except the junior sow pigs. King's Col. Again Jr. is exceptionally big and real good except in the loin. Fred Swan's pig is one with the right outcome. Not so many aged sows were shown, but the quality of the class was strong. Fred Swan's Royal Critic was a universal favorite for the best purple. She is very smooth, good in the back and has the size. The East was in again with senior yearling sows. The three tops were of the same type and good. Joe's Orion Nellie 5th is big, smooth and right except on her feet. She beat a good-footed one in Mollie's Wonder 5th. Jackson had three good pigs to top the under year class and another for seventh. They were the high-backed, smooth kind. Junior pigs were a splendid class of big gilts. Only the very large, growthy kind got in the money. Jackson carried away all the blue ribbons for groups. In uniformity and quality he had them all stopped. He secured three out of four championships and had a remarkable herd to present to the judges.

Jr.; 2d Swan on Premier's Model, 3d Atwater on Model Wonder 2d, 4th Brookwater Farm on The Principal 20th, 5th Breed on King of Orion Cherries, 6th Golder on Critic's Headquarters, 7th and 8th Hughes on Chief of Sangamo 7th and Choice Col. of Sangamo 2d.

Aged sow (8 shown), 1st Swan on Royal Critic, 2d and 3d Golder on Jumbo Jennie 2d and Jumbo Jennie 3d, 4th Van Meter on Red Feather 2d, 5th and Jorgensen on Sensation Belle and Wonder Model, 7th Atwater on Maplehurst Lady 2, 8th Moats Bros. on Miss Golden Gano 2d; senior yearling (15 shown), 1st Jackson on Orion's Willetta 3d, 2d Brookwater Farm on Brookwater Protectioness, 3d Johnson on Oakland's Highland Maid, 4th Reeve Bros. on Art's Choice Again, 5th Jorgenson on Golden Pride, 6th and 7th Waltemeyer & Son on Grand Lady 24th and Grand Lady 66th, 8th Atwater on Proud Helen 2d; junior yearling (27 shown), 1st Jackson on Joe's Orion Nellie 5th, 2d Van Meter on Mollie's Wonder 1st, 3d Brookwater Farm on Brookwater Red Bud 10th, 4th Waltemeyer & Son on Grand Lady 76th, 5th and 6th Golder on Critic's Peach and Critic's Gayety, 7th Brookwater Farm on Brookwater Favorite 5th, 8th Waltemeyer & Sons on Great Wonder's Lady 8th; senior pig (24 shown), 1st 2d and 3d Jackson on Joe's Orion Lady 8th, Joe's Orion Lady 9th and Joe's Orion Lady 10th, 4th Brookwater Farm on Brookwater Lass D., 5th Breed on Queen the Col, 6th Van Meter on Lady Belle 10th, 7th Jackson on Joe's Orion Lady 30th, 8th Brookwater Farm on Brookwater Lass E.; junior pig (37 shown), 1st Putnam & Son on Miss King's Lady, 2d Breed on Queen Orion Cherry King, 3d Jackson on Joe's Orion [illegible] 5th Breed on Princess Orion Cherry King, 6th Putnam & Son on Miss King's Lady 82d, 7th Golder on Critic's Darling, 8th Brookwater Farm on Brookwater Fancy Lady 11th.

Old herd, 1st Jackson, 2d Golder, 3d Brookwater Farm, 4th Van Meter, 5th Waltemeyer, 6th T. Johnson, 7th Jorgensen, 8th Crow; herd bred by exhibitor, 1st and 2d Jackson, 3d Brookwater Farm, 4th Putnam, 5th Johnson, 6th Waltemeyer, 7th Brookwater Farm, 8th Crow; young herd, 1st Jackson, 2d Putnam, 3d Breed, 4th Brookwater Farm, 5th Golder, 6th Atwater, 7th Van Meter, 8th Hughes; get of sire, 1st and 2d Jackson, 3d Putnam, 4th Waltemeyer, 5th Breed, 6th Van Meter, 7th Brookwater Farm, 8th Golder; produce of dam, 1st Jackson, 2d Putnam, 3d Brookwater Farm, 4th Breed, 5th Atwater, 6th Golder, 7th Brookwater Farm, 8th Crow.

Senior champion boar, Jackson on Joe's Orion King; junior and grand champion boar, Jackson on Orion's Cherry King 2d; senior and grand champion sow, Swan on Royal Critic; junior champion sow, Jackson on Orion's King Lady 30th.

Nebraska State Board of Agriculture silver cup (best boar and three gilts farrowed since March 1, 1917, bred by exhibitor), Putnam & Son; Union Stockyards Co. trophy (best four boars bred and shown by one exhibitor), Jackson; Journal Stockman cup (best litter of four or more junior pigs owned and bred by one exhibitor), Putnam & Son; Twentieth Century Farmer cup (best four sows of any age bred and owned by one exhibitor), Jackson.

DUROC JERSEY FUTURITIES.

Junior boar pig, 1st Atwater on Model Wonder, 2d Brookwater on The Principal 20th, 3d Golder on Critic's Banker, 4th Hughes on Choice Col. of Sangamo 2d, 5th Brookwater on Brookwater Principal Jr., 6th Breed on Col. Cherry Chieftain, 7th and 8th Atwater on Model Wonder 2d and Queen's Proud Chief, 9th Hughes on Choice Col. of Sangamo 1st, 10th Brookwater on The Principal 23d; junior sow pig, 1st Golder on Critic's Choice, 2d Brookwater on Brookwater Fancy Lady 11th, 3d Atwater on Wonder May, 4th Golder on Critic's Maid, 5th Van Meter on Kitty Wonder, 6th Golder on Critic's Pet, 7th Van Meter on Kitty Wonder 2d, 8th Crow on Crow's Futurity Girl, 9th and 10th Brookwater on Brookwater Jam 20th and Brookwater Fancy Lady 12th; futurity litter, 1st Golder, 2d Atwater, 3d Brookwater, 4th Van Meter, 5th Brookwater, 6th Atwater, 7th Crow, 8th Brookwater, 9th Jorgenson, 10th Crow.

Poland Chinas.—The show was exceptionally good in some classes while others were hardly up to the standard set last year. The increase of 35 head was found mostly in the pig classes, which ranged from 16 to 34 head shown. Official weights this year gave an accurate measure where last year much speculation was to be heard. The aged boar class averaged well over 1,000 pounds, the heaviest being Caldwell's Big Bob, at 1,122. Several of the mature boars missed 1,100 by so few pounds that they could at home lay claim to the even figure. The first three aged sows averaged 827 pounds; Mc's Choice being the lightest because not in as high condition as the second and third. Pigs showed heavy weights. It was a big-type show in every respect with quality and firmness pronounced in nearly every hog driven into the ring. The first class brought out the heaviest hog on the grounds winner. Caldwell's Big Bob is a very strong-backed and good-footed boar for the weight he carries. King Jones is another big one at 1,079. A very active boar and well balanced in his make up. The straightest-lined boar of the class came in third. At 980 pounds as a two year old he is not short on weight, but looked small beside the two older boars. Of the five senior yearling's Meharry's was a good top. He is growthy, smooth, up on his toes and gave the aged boar a great run for the senior championship. The junior yearlings were disappointing. A much stronger lot appeared in this class last year. The tops of the list were good, but the remainder only average. Under a year pigs made up the deficiency in the class just before them. This was one of the best of the show. The first three are all growthy, good quality kind with an outcome to them. Junior boar pigs were the largest Poland class. The first pair are much alike, big, stretchy and good on their feet. The second shows wrinkles that the first has failed to develop. Aged sows were big and most of them firm and smooth fleshed. There was close competition between the first two, a pair of very breedy looking sows. Mc's Choice is more uniform in width, but nearly 50 pounds lighter than Big Wonder's Maid. Only good ones appeared in the senior yearling class. It showed the highest average excellence of individuals in the classification. Few faults are to be found with any of the eight money winners. Growth and stretch characterized the under 18 months class. They had the weight, but it was in frame and scale rather than too much fat. The senior pig class was strong both in numbers and quality. Bob's Giantess A. is long, smooth and a comer. Conrad's top of the junior pigs is a neat, smooth lady of good size. First, fourth and fifth are all from the same litter. Group moneys were well distributed. The futurity winnings of H. B. Walter & Son deserve mention. In calculating the points for awarding the Poland China Journal trophy this firm had 56, while the nearest competitor had made but 32. Championships were soon tied once the judges had given the senior boar ribbon to Caldwell's Big Bob. It was done only after much examination and debate. Judged by Crawford's comments

the second National Poland Show was a decided advance from the first.

Exhibitors—S. Y. Burks, Bolivar, Mo.; F. B. Caldwell, Howard, Kan.; I. J. Conrad, Melbourne, Ia.; W. E. Conrad, Melbourne, Ia., E. C. Caverly, Tolono, Ill.; P. Dawson, Endicott, Neb.; F. Shattuck, Hastings, Neb.

Aged boar (7 shown), 1st Caldwell on Caldwell's Big Bob, 2d Sievers on King Jones, 3d Kritzeck Bros. on Big Price's Equal, 4th Young on Young's Big Joe, 5th McDonald on McChief, 6th Sells on Mammoth Nelson, 7th Marlow & Son on Buster; senior yearling (5 shown), 1st Meharry & Caverly on Big Jumbo Wonder, 2d Porter on Blue Valley King, 3d Stricklett on Kennard's Ursus, 4th Dawson on Nebraska Bob, 5th McDonald on Oakwood Big Model; junior yearling (12 shown), 1st Pederson & Son on King L, 2d Walter & Son on Big Wonder, 3d Dawson on Jumbo Chief, 4th Meese & Son on Master Jumbo, 5th Graham on Black Cloverdale, 6th Dralle on Long Big Bob, 7th McDonald on Oakwood Giant, 8th Williamson on Mouw's Pawnee Chief; senior pig (16 shown), 1st Slepicka & Son on W. A Wander, 2d Marshall & Son on Futurity Wonder, 3d Meese & Son on First National, 4th Slepicka & Son on Smooth Columbus, 5th McDonald on Mc's Long King, 6th Walter & Son on Long Wonder, 7th Dawson on Overland Columbus, 8th Meese & Son on Model Rex; junior pig (34 shown), 1st Walters & Son on Bob's Quality, 2d Caverly on Long Square Jumbo, 3d Meyer & Son on Giant Bos, 4th Walters & Son on Bob's Quality 2d, 5th McMahon on Nishna Bill, 6th Caverly on Big Wonder, 7th Conrad on Model Orange, 8th Walters & Sons on Bob's Quality 3d.

Aged sow (12 shown), 1st Meharry on M.'s Choice, 2d Sievers on Big Wonder's Maid, 3d McDonald on Miss Price 4th, 4th Meharry on Miss Orphan Wonder 1st, 5th Sievers on Bob's Model, 6th O'Connell on Big Bone, 7th Caldwell on Belle Wonder, 8th Dawson on Mouw's Lady Uhlan; senior yearling (10 shown), 1st Hather on Orphan's Big Type 2d, 2d Dawson on Robina 4th, 3d Meharry on Miss Choice 2d, 4th Meese & Sons on Queen Rex, 5th McDonald on Mc's Giantess, 6th Porter on Wonder Giantess, 7th Sievers on Long King Lady, 8th Walters & Son on Miss Jumbo Wonder; junior yearling (13 shown), 1st Jensen & Son on Model, 2d Hather on Orphan Queen 1st, 3d Sievers on Long Lady Wonder, 4th Meese & Sons on Miss Long Wonder, 5th Hather on Orphan Queen 2d, 6th Meharry on M's Pride, 7th Graham on Winning Queen, 8th Walter & Son on Bob's Climax; senior pig (23 shown), 1st Halford on Bob Giantess A., 2d Walter & Son on Wonder Beauty 2d, 3d Walter & Son on Wonder Beauty 3d, 4th Dawson on Uhlan Columbia Girl 2d, 5th Halford on Bob Giantess B., 6th Meese & Sons on Miss Long Wonder 2d, 7th Meese & Sons on Hesitation, 8th Dawson on Uhlan Columbia Girl; junior pig (20 shown), 1st Conrad on Orange Lady, 2d Meyer & Son on Bonnie Bos., 3d McGath on M.'s Lady Orphan, 4th Conrad on Orange Lady 2d, 5th Conrad on Orange Lady 3d, 6th Kritzeck Bros. on Lady Black Price, 7th Kritzeck Bros. on Lady Big Price, 8th Graham on Grand Lady Price, 9th Graham on Great Lady Price, 10th McGath on Orphan Mollie.

Aged herd (9 shown), 1st Meharry, 2d Sievers, 3d Caldwell, 4th Walter & Son, 5th Hather, 6th Meese & Son, 7th McDonald, 8th Dawson; young herd (9 shown), 1st Meese & Sons, 2d Dawson, 3d Conrad, 4th Meyer & Sons, 5th Hather, 6th McGath, 7th Graham, 8th McDonald; herd bred by exhibitor (9 shown), 1st Meharry, 2d Hather, 3d Conrad, 4th Meyer & Sons, 5th McGath, 6th Graham, 7th McDonald, 8th Kritzeck Bros: get of sire (13 shown), 1st Hather, 2d Walter & Son, 3d and 7th Meese & Son, 4th Conrad, 5th McMahon, 6th Wade, 8th Caverly; produce of dam (9 shown), 1st Hather, 2d and 6th Meese & Sons, 3d Walter & Son, 4th Conrad, 5th McMahon, 7th Caverly, 8th McGath.

Senior and grand champion boar, Caldwell on Caldwell's Big Bob; junior champion boar, Slepicka on W. A Wonder; senior and grand champion sow, Meharry on Mc's Choice; junior champion sow, Halford on Bob's Giantess A.

POLAND CHINA FUTURITIES.

Senior boar pig, 1st Marshall & Son on Futurity Wonder, 2d Meese & Son on First National, 3d Slepicka & Son on Smooth Columbus, 4th McDonald on Mc's Long King, 5th Walter & Son on Long Wonder, 6th Dawson on Overland Columbus, 7th and 8th Meese & Son on Model Rex and Long Wonder's Master; junior boar pig, 1st Walter & Son on Bob's Quality, 2d Caverly on Long Square Jumbo, 3d Meyer & Son on Giant Bos, 4th Walter & Son on Bob's Quality 2d, 5th Caverly on Big Wonder, 6th Conrad on Model Orange, 7th Walter & Son on Bob's Quality 3d, 8th Meese & Sons on Big Fraction, 9th Conrad on Big Futurity, 10th Caldwell on Black Big Bob; senior sow pig, 1st Walter & Son on Wonder Beauty 2d, 2d Walter & Son on Wonder Beauty 3d, 3d Dawson on Uhlan Columbia Girl 2d, 4th and 5th Meese & Sons on Miss Long Wonder 2d and Hesitation, 6th Dawson on Uhlan Columbia Girl, 7th Meese & Sons on Miss Long Wonder 3d, 8th Kritzeck Bros. on Miss Lady Price; junior sow pig, 1st Conrad on Orange Lady, 2d Meyer & Son on Bonnie Bos, 3d McGath on M.'s Lady Orphan, 4th and 5th Conrad on Orange Lady 2d and Orange Lady 3d, 6th and 7th Kritzeck Bros. on Lady Black Price and Lady Big Price, 8th and 9th Graham on Grand Lady Price and Great Lady Price, 10th McGath on Orphan Mollie; futurity litter, 1st Walter & Son, 2d Conrad, 3d McGath, 4th Caverly, 5th Graham, 6th Marlow, 7th McDonald, 8th Burks, 9th Caldwell, 10th Dralle.

Poland China Journal Silver Trophy, awarded for the highest number of points scored in the futurity classes, Walter & Son.

POLAND CHINA SPECIAL CUPS.

Nebraska State Board of Agriculture, Meyer & Sons; Union Stockyards Co., Walter & Son; Journal-Stockman, Walter & Son; Hotel Castle, Hather.

Chester Whites.—Most of the leading breeds of swine have passed through the days of adjustment from medium size hogs to big types. The Chester Whites are just beginning their pilgrimage. It will unquestionably be less of a struggle than it was for the Poland Chinas for the trail is broken and a few generations will show surprising results. The pioneers in the big-type Chesters are Boyer & Son, of Farmington, Iowa. Their Wildwood Prince stock proved to Chester White men that big type Chesters are as desirable as other large types and as easily possible. Seven hundred and thirty-five pounds is remarkable for a junior yearling, but when the animal has all the requisites to make a grand champion along with such surprising weight, it is truly wonderful. Prince Big Bone is the boar; first prize junior yearling and grand champion. The Chester White show was one of the most attractive this year, as it was last. Exhibitors appeared in white uniforms and wearing the catalog numbers of their entries. Visitors were much better able to follow the show than in other rings. It all advertises the white hogs and F. F. Moore and son Fred were given much credit for their capable managing of the breed show. Aged boars were a good indication of the strong classes to follow. Tony Evans is a good, smooth, well-balanced boar, but of nowhere the size for age of Odegaard's Wildwood Prince Jr. Many at the ringside favored the big boar, which was bred by Boyer & Son. He is a strong-boned, good-footed hog with few of the faults of the big-type sort. Feland, a new breeder, showed a great boar in Royal Wonder. There was not enough of him to take the senior championship away from the junior yearling. The last boar made a great show and promises much for the big-type era in Chester Whites. Brown's Model Select and Wm. A. 2d are very thick, low down and smooth. They might show more stretch, but have plenty of type. Hiland Lily 3d is a working sow, a point emphasized by the judges. She is very smooth with lots of quality and was not seriously threatened even when shown for the championship. Barr's senior yearling, Lenora Gem, is a very thick, well-fitted sow, but could stand a little more stretch of frame. Boyer's Big Beauty 2d has the edge in size over the Barr sow, but not in quality and smoothness. The junior yearlings were a strong class topped by good, smooth sows. Senior sow pigs were the biggest and one of the strongest classes. Crandall's gilt is thick, big and up on her toes. Barr's Hiland Pride 3d is a very symmetrical, smooth gilt not over large. She became junior champion when Crandall was unabel to show. Scottlea Prudence nicely topped the juniors; not as strong a class as the preceding. Next year will be more interesting to Chester White followers than this. The big type movement is started and its progress will be eagerly watched.

Exhibitors: B. M. Boyer & Sons, Farmington, Ia.; G. L. Emmert & Sons, Mason City, Ia.; W. P. Doolittle, Woodland, Mo.; A. G. Satyr, Stanhope, Ia.; R. E. Brown, Dunlap, Ia.; G. E. Smith, Little York, Ill.; J. L. Barber, Harlan, Ia.; Chas. Odegaard, Lake Preston, S. D.; W. T. Barr, Ames, Ia.; H. F. Fehner, Higginsville, Mo.; H. C. Crandall, Cass City, Mich.; Chas. H. Murray, Friend, Neb.; R. C. Scott, Nelson, Mo.; F. R. Clark, Friend, Neb.; W. E. Gaffey, Storm Lake, Ia.; P. H. Sheridan, Vail, Ia.; H. L. Bode, Friend, Neb.; W. Buehler, Sterling, Neb.; J. P. Coulson, Storm Lake, Ia.; W. L. Danforth & Sons, Storm Lake, Ia.; C. C. Paul & Son, Laurel, Ia.; F. M. Feland, Tipton, Mo. Judge, L. C. Reese, Prescott, Ia.

Aged boar (15 shown), 1st Barber on Tony Evans, 2d Odegaard on Wildwood Prince Jr, 3d Satyr on Combination's Defender, 4th Boyer on Rajah, 5th Doolittle on White Eagle Select, 6th Emmert on Anxiety, 7th Paul on White Rex, 8th Brown on Wm.'s Goods; senior yearling (7 shown), 1st Feland on Royal Wonder, 2d Barber on Eden Valley Chief, 3d Barr on Highland Improver, 4th Smith on Wonder's Defender, 5th Crandall on Arbo's Leader, 6th Sheridan on Amer Pioneer, 7th Murray on Ideal Chief; junior yearling (15 shown), 1st Boyer & Son on Prince Big Bone, 2d Barber on U. S. Perfection, 3d Crandall on Perfect Schoolmaster, 4th Smith on Preparedness, 5th Barber on Chester B., 6th Doolittle on White Eagle Van, 7th Barr on Pershing, 8th Doolittle on Jambalaya; senior pig (26 shown), 1st Brown on Model Select, 2d Emmert on Anxiety 3d, 3d [illegible]

TWO neighbors were talking. Both had new cars of the same make.

"You passed me rather easily on the hill yesterday," said the first. "It seems as though we should have been nip and tuck."

"So we should," replied the other—an experienced motorist. "Have you tampered with your carbureter?"

"No."

"What oil do you use?"

"Oh, any good 'medium' oil."

"Maybe that's the difference. I use Gargoyle Mobiloil 'A' as recommended for our cars in the Vacuum Oil Company's Chart of Recommendations."

"Well, that's a 'medium' oil, isn't it?"

"Yes. But 'medium' oils vary almost as much in body as they do in quality."

"But I don't see . . . . . ."

"Nor did I—some years back. But there *is* a difference. It's a difference in piston-ring seal. Of course you know there's a clearance between our cylinders, piston rings and pistons. The correct oil will thoroughly close this clearance. The power is then tightly sealed within the combustion chambers, preventing waste of gas and power past the rings. The force of a power explosion may be 300 pounds or over to the square inch. You can imagine how it shoots past the piston rings if they aren't thoroughly sealed with the correct oil.

You may ask, "Is the above an actual conversation?" No. It simply brings out an every-day condition.

Oftener than most motorists realize, power shortage can be traced back directly to poor piston-ring seal due to using oil of incorrect body, or poor quality

A change to the correct grade of Gargoyle Mobiloils often shows surprising results—increased power, gasoline economy and reduced oil consumption, to say nothing of reduced carbon deposit.

Write for new 56-page booklet containing complete discussion of your lubrication problems, list of trouble with remedies and complete Charts of Recommendations for Automobiles, Motorcycles, Tractors and Motorboat Engines.

GARGOYLE

Mobiloils

A grade for each type of motor

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container. If the dealer has not the grade specified for your car, he can easily secure it for you.

CORRECT AUTOMOBILE LUBRICATION

Explanation: The four grades of Gargoyle Mobiloils, for gasoline motor lubrication, purified to remove free carbon, are:

Gargoyle Mobiloil "A" **Gargoyle Mobiloil "E"**
Gargoyle Mobiloil "B" **Gargoyle Mobiloil "Arctic"**

In the chart below, the letter opposite the car indicates the grade of Gargoyle Mobiloils that should be used. For example, "A" means Gargoyle Mobiloil "A," "Arc" means Gargoyle Mobiloil "Arctic," etc. The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

This Chart is compiled by the Vacuum Oil Company's Board of Engineers and represents our professional advice on Correct Automobile Lubrication.

YOUR TRACTOR

also may be lubricated efficiently with Gargoyle Mobiloils. On request we will mail you a separate Chart specifying the correct grade for each make and model of tractor.

VACUUM OIL COMPANY, Rochester, N.Y., U.S.A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world

Domestic Branches Boston, Detroit, Kansas City, Kan., New York, Philadelphia, Chicago, Minneapolis, Indianapolis, Pittsburgh, Des Moines

Wonder Prince, 4th Barber on Northern Spy, 5th Crandall on C. C. Schoolboy 17th, 6th Feland on Callaway Chief, 7th Crandall on C. C. Abe 2d Jr., 8th Brown on Brown's O. K.; junior pig (17 shown), 1st Brown on William A 2d, 2d Odegaard on Fancy Boy, 3d Scott on Scottlea Parson Proud, 4th Barr on Victor Boy, 5th Gaffey on Billy J., 6th Crandall on C. C. Schoolboy 18th, 7th Smith on Right Boy, 8th Odegaard on Shamrock.

Aged sow (20 shown), 1st Barr on Hiland Lily 3d, 2d Crandall on Perfection 5th, 3d Barber on Queen Iola, 4th Barr on Hiland Belle, 5th Barber on Wedding Belle, 6th Smith on White Miss, 7th Buehler on Dandy, 8th Smith on Fancy; senior yearling (9 shown), 1st Barr on Lenora's Gem, 2d Boyer & Sons on Big Beauty 2d, 3d Barber on Chester Queen, 4th Smith on Grace 1st, 5th Barber on J. L.'s Delight, 6th Crandall on Perfection Triumph, 7th Barr on Miss Lenora 3d, 8th Feland on Reese's Choice; junior yearling (18 shown), 1st Crandall on Perfection 1st Jr., 2d Smith on Lady Smith, 3d Barr on Highland Frankie 2d, 4th Brown on Volunteer Lady, 5th Gaffey on Lady Highland, 6th Buehler on Alfalfa Queen 3d, 7th Doolittle on Queen Sunbeam, 8th Smith on Model Maid; senior pig (23 shown), 1st Crandall on Perfection's Last, 2d Barr on Hiland Pride 3d, 3d Odegaard on Shamrock 1st, 4th Brown on Arline 1st, 5th Smith on Princess Lady, 6th Brown on Arline 2d, 7th Barr on Hiland Pride 4th, 8th Odegaard on Shamrock 2d; junior pig (17 shown), 1st Scott on Scottlea Prudence, 2d Smith on White Gem, 3d Barr on Miss Lenora A., 4th Gaffey on Highland Lass, 5th Smith on Miss White, 6th Barr on Miss Lenora B., 7th H. Crandall on C. C. Schoolgirl 10th, 8th Fehner on Tip Top.

Old herd, 1st Barber, 2d Barr, 3d Crandall, 4th Barber, 5th Brown, 6th Boyer, 7th Doolittle, 8th Smith; young herd, 1st Brown, 2d Smith, 3d Crandall, 4th Barber, 5th Gaffey, 6th Scott, 7th Odegaard, 8th Bode; herd bred by exhibitor, 1st Barber, 2d Barr, 3d Brown, 4th Smith, 5th Boyer, 6th Emmert & Sons, 7th Gaffey, 8th Odegaard; get of sire, 1st Barr, 2d Brown, 3d Smith, 4th Crandall, 5th Barber, 6th Boyer, 7th Barr, 8th Barber; produce of dam, 1st Crandall, 2d Barber, 3d Odegaard, 4th Smith, 5th Brown, 6th Scott, 7th Barber, 8th Odegaard.

Senior and grand champion boar, Boyer & Son on Prince Big Bone; junior champion boar, Brown on William A. 2d; senior and grand champion sow, Barr on Hiland Lily 3d; junior champion sow, Barr on Hiland Pride 3d.

Nebraska State Board of Agriculture silver cup (best boar and three gilts farrowed since March 1, 1917, bred by exhibitor), Brown; Union Stockyards Co. trophy (best four boars bred and shown by one exhibitor), Odegaard; Journal Stockman cup (best litter of four or more junior pigs bred and owned by one exhibitor), Scott.

Berkshires.—"The strongest Berkshire show I can recall in many years," was Judge Spicer's comment upon the exhibit. Berkshire men have a habit of coming farther to the National show than breeders of other hogs. Again this year both the Atlantic and Pacific coasts were represented and their exhibitors took away a nice share of the prize money. A wider range of territory is covered by the list of showmen than is the case in any other breed. More Berkshires and of better individual merit was the universal judgment upon the show this year. Not so many aged boars were driven out, but no serious faults were to be found with those presented. Baron Duke 201st became both the senior and grand champion. He is a thick, smooth fellow and as long as every Berkshire should be. Of very good type, he had little difficulty beating the junior champion. Corsa's senior yearling is a very thick, smooth boar and his junior yearling a high quality, trim, tidy kind. After the aged boar class was past the Illinois herd won every class on males. The senior pig became the junior champion. He is growthy, has very good bone and feet, but is quite inclined to wrinkle for an under year pig. Iowana Farms showed a good junior yearling in Iowana Royal 48th and a splendid pair of senior pigs in Iowana Baron 30th and Iowana Royal 52d. Junior boar pigs were one of the strong classes of the show again, topped by Corsa. Aged sows were seven in number and all good. The Brush sow went through to the grand championship. Although shown by a California exhibitor, she was bred by an Iowa breeder, Dean Curtiss, of Ames. Within three weeks of farrowing, she was not as heavily fed as others in the aged class, but is a wonderful sow in her length, smoothness and balance. Iowa Duchess 31st is another good one and would look well at the head of a class. Hood Farm's senior yearling is thick, smooth and exceptionally heavy in the hams. Their junior yearling is a very trim, tidy, clean-boned sow and still has made good size. Symboleer's Mistresspiece is good in every way, but a little disposition to settle on her hind pasterns. She was beaten for junior championship by the very tidy, attractive gilt of Townsend Farms.

Exhibitors: F. A. Brush, Santa Rosa, Cal.; S. Y. Burks, Bolivar, Mo.; W. S. Corsa, Whitehall, Ill.; Hood Farm, Lowell, Mass.; Iowana Farms, Davenport, Ia.; Jenkins Bros., Orleans, Ind.; R. C. Obrecht, Topeka, Kan.; Townsend Farms, New London, O. Judge, W. E. Spicer, Bushnell, Ill.

Aged sow (7 shown), 1st Brush on Rookwood Lady 100th, 2d Iowana Farms on Iowa's Duchess 31st, 3d Corsa on Rival's Hopeful Belle, 4th Hood Farm on Successor's Duchess 2d, 5th Iowana Farms on Iowana Lady 19th, 6th Brush on Wohler's Geromino, 7th Burks on Baron Duke's Lady 10th; senior yearling (11 shown), 1st and 2d Hood Farm on Successor's Lady 14th and Successor's Dolly, 3d Brush on Rookwood Belle 7th, 4th and 5th Iowana Farms on Iowana Lady 42d and Iowana Lady 41st, 6th and 7th Corsa on Master's Matchless Lady and Emblem Duke's Lady, 8th Iowana Farms on Iowana Lady 45th; junior yearling (14 shown), 1st Hood Farm on Longfellow's Double's Daughter, 2d Brush on Mayfield Lady 16th, 3d Corsa on Fearnaught Gem, 4th Brush on Princess Leader, 5th Hood Farms on Longfellow Double's Maid, 6th Rogers Bros. on Majestic Beauty 14th, 7th Iowana Farms on Iowana Rose 6th, 8th Corsa on Fearnaught Gem 2d; senior pig (14 shown), 1st Corsa on Symboleer's Mistresspiece, 2d Rogers Bros. on Matchless Belle 23d, 3d Corsa on Symboleer's Double Girl, 4th Brush on Mayfield Laurel 15th, 5th and 6th Jenkins Bros. on Superb Premier Duchess and Superb Premier Princess, 7th Iowana Farms on Iowana Belle 55th, 8th Hood Farm on Longfellow's Double's Bernice; junior pig (12 shown), 1st Townsend Farm on Champion's Blossom 3d, 2d Rogers Bros. on Majestic Girl 14th, 3d and 4th Corsa on Symboleer's Della and Symboleer's Della 2d, 5th Brush on Miss Villa's Laurel, 6th Iowana Farms on Iowana Peaceful 59th, 7th Corsa on Symboleer's Duchess 4th, 8th Rogers Bros. on Majestic Beauty 15th.

Aged herd (8 shown), 1st Hood Farm on herd headed by Longfellow's Double, 2d Corsa on herd headed by Royal Superbus 2d, 3d and 6th Iowana Farms, 4th Brush, 5th Corsa, 7th Burks, 8th Obrecht; young herd (9 shown), 1st Corsa on herd headed by Superb Fearnaught, 2d Iowana Farms on herd headed by Iowana Baron 30th, 3d and 5th Rogers Bros., 4th Hood Farm, 6th Corsa, 7th Jenkins Bros., 8th Iowana Farms; herd bred by exhibitor (8 shown), 1st Hood Farm on herd headed by Longfellow's Double, 2d Corsa on herd headed by Superb Fearnaught, 3d and 4th Iowana Farms, 5th and 6th Rogers Bros., 7th Burks, 8th Obrecht; get of sire (14 shown), 1st Hood Farm on get of Lord Premier's Successor, 2d Corsa on get of Symboleer 5th, 3d Iowana Farms on Ames Rival 51st, 4th Hood Farm, 5th and 6th Corsa, 7th Rogers Bros., 8th Iowana Farms; produce of dam (9 shown), 1st and 2d Corsa on produce of Matchless Sallie and Superbus Sallie, 3d Hood Farm, 4th and 8th Iowana Farms, 5th and 6th Rogers Bros., 7th Brush.

Senior and grand champion boar, Brush on Baron Duke 201st; junior champion boar, Corsa on Symboleer's Jr. 2d; senior and grand champion sow, Brush on Rookwood Lady 100th; junior champion sow, Townsend Farms on Champion's Blossom 3d.

Silver cup special (Board of Agriculture), Rogers Bros.; silver cup special (Union Stockyards), Hood Farm.

Gold watch offered by the Berkshire World to the herdsman who keeps his herd, pens and aisles in the best condition, awarded to N. D. Browning, herdsman for W. S. Corsa.

Spotted Poland Chinas.—This breed showed marked improvement over the show of 1916. Exhibitors were increased from two to five and entries from 33 to 80. Many good hogs were shown; some of the boars especially were wrinkled and rough, but improvement in the type and quality goes on rapidly. Some of the aged boars were a little plain and unfortunately one of the best of them was badly lamed. Aged sows brought out the best individual of the show, a remarkably smooth, trim matron from the Bock & Shirk herd. Among the pigs, the females were the highest in merit; some very smooth ones being shown. The average of individuals shows a long step forward in the Spotted Poland business. Soon they should be in a position to challenge other breeds now much larger in numbers.

Exhibitors—A. S. Booco, Jeffersonville, Ohio; Bock & Shirk, Hempton, Ind.; J. D. Gates & Sons, Ravenwood, Mo.; E. R. McKeefer & Son, Ossian, Ind.; G. W. Reeve, Rushville, Ind. Judge, Geo. H. Kirkpatrick, Utica, Ohio.

Aged boar, 1st Reeve on Duke of Fairland, 2d Gates & Sons on Spotted Mammoth, 3d McKeefer & Son on Mc's Pride, 4th Booco on Park Co. Choice, 5th Booco on Big Frank, junior yearling, 1st Gates & Sons on Gates' Leader, 2d Bock & Shirk on Lilly's Chief, 3d Booco on Lill's Longfellow; senior pig, 1st Booco on Bouncer, 2d McKeefer & Sons on Mc's Perfex, 3d Reeve on Dandy Lion, 4th Booco on Herbert's Pride; junior pig, 1st Gates & Sons on Gates' Wonder, 2d Reeve on Spotted Dude, 3d Booco on Michigan Boy 30th, 4th Bock & Shirk on American Boy, 5th and 6th Gates & Sons on Gates' Wonder 2d and Big Spots, 7th and 8th Booco on Michigan 33d and Michigan Boy 31st.

Aged sow, 1st Bock & Shirk on Queen Bess 2d, 2d Booco on Elizabeth, 3d Booco on Highland Queen, 4th Reeve on Vivian Martin, 5th and 6th Bock & Shirk on Packer's Model and Stockholm Margaret, 7th Booco on Silver Maid; senior yearling, 1st Reeve on Palmyra 1st, 2d Bock & Shirk on Underwood's Daisy, 3d, 4th and 5th Booco on Queen Laverne, Ohio Bess 2d and Lady Laverne; junior yearling, 1st

A Common Sense Standard Tractor

Here is a tractor that has come to stay—because it is built on standard, approved lines. Nothing freakish about it—only those principles are used which have proved their worth through time. For this reason you can buy a Turner tractor with the same confidence you would buy any other piece of farm machinery. The

TURNER Simplicity

tractor has four wheels, a four-cylinder Waukesha tractor motor and Hyatt Roller Bearings. Burns kerosene or gasoline. Powerful drawbar pull, light in weight, economical. Has simple gear shift control, all working parts are enclosed and run in oil, no side draft, makes short turns.

The Turner is an all-around tractor, built for the average size farm. Handles all kinds of belt jobs besides hauling and working in the field. Built by the makers of the well-known Simplicity Farm Engine and thoroughly dependable in every way.

Write today for complete specifications.

TURNER MFG. CO.,
118 Lake St. **Port Washington, Wis.**

Booco on Lady Perfection, 2d, 3d and 4th Bock and Shirk on Beautiful Rose, Perfect Siss 7th and Ia Pearle, 5th and 6th Booco on Lady Perfection 2d and Lady Perfection 3d; senior pig, 1st Booco on Perfect Siss 10th, 2d Bock & Shirk on American Belle, 3d and 4th Reeve on Rellie and Duke's Pet, 5th McKeefer & Sons on Bertha C. 2d, 6th Reeve on Mellie, 7th Bock & Shirk on American Star, 8th Booco on Perfect Siss 11th; junior pig, 1st Gates & Son on Gates' Choice, 2d Bock & Shirk on Springtime 3d, 3d and 4th Reeve on Light Fancy and Dark Fancy, 5th McKeefer & Sons on Lottie E. 5th, 6th Gates & Sons on Gates' Choice 2d, 7th Booco on Lady Alice 4th, 8th Bock & Shirk on Springtime 4th.

Aged herd, 1st Reeve, 2d and 3d Bock & Shirk, 4th and 5th Booco; young herd, 1st Gates & Sons, 2d and 6th Booco, 3d Reeve, 4th McKeefer & Sons, 5th Bock & Shirk; herd bred by exhibitor, 1st and 3d Booco, 2d Gates & Sons, 4th and 6th McKeefer & Sons, 5th Bock & Shirk; get of sire, 1st and 7th Booco, 2d Gates & Sons, 3d Reeve, 4th and 6th Bock & Shirk, 5th and 8th McKeefer & Sons; produce of dam, 1st and 7th Booco, 2d Gates & Sons, 3d and 5th Bock & Shirk, 4th Reeve, 6th and 8th McKeefer & Sons.

Senior and grand champion boar, Reeves on Duke of Fairland; junior champion boar, Gates & Sons on Gates' Wonder; senior and grand champion sow, Bock & Shirk on Queen Bess 2d; junior champion sow, Booco on Perfect Siss 10th.

Union Stockyards Company Cup, best 4 boars bred and shown by one exhibitor, Gates.

Hampshires.—In numbers and in many classes in quality the belted hogs shown excelled the 1916 exhibit. The under six months boar pigs brought out the largest class, 40 head, shown in any breed. Judging was not completed until late in the show, Tuesday afternoon. The time awards were to be made had been well advertised and many breeders followed the judging until its completion. Some classes were below the standard set last year. Aged boars were 13 in number, but several of them added little of credit to the ring. The Senator was a good top, being a splendid type, thick, uniform, with good hams, but a trifle short in body. Schroeder's second was a boar showing less finish than the first. Capt. Silko had been spoken of as a strong contender for the top, but landed third. Along with the rest of the Silver herd, he has been a strenuous traveler this season and was a little off in his feet. Lewis headed the next class with a strong, thick-backed boar of good quality. A trifle more stretch would be to his advantage as he is medium in size. My Rambler is more growth but not so smooth. Lewis again topped the ring when eighteen junior yearlings appeared. His pig has smoothness and uniformtiy in good measure. Jones was first and third in under twelve months boars with a smooth, growthy pair which are litter brothers. Home Stake was lame in one front foot, but was good enough to hold the second pen. The strongest boar class was the junior pigs. Manley's Young Senator became junior champion. In size and smoothness he had the advantage over the pair Roberson had in second and third. Pigs lower down in the money were on a par individually with the tops in several other classes. Aged sows were a strong ring. Polly Lookout headed twenty good entries. She has size, smoothness and quality. Senior yearlings were the most classy of the female rings. The senior and grand champion, Roxy Lookout, is a splendid type—thick, uniform and up well on her pasterns. Wickfield Farm and Lewis both had three good sows in the money. F. F. Silver continued to win the blues until the junior pigs were brought in. His Cherokee Pearl is a thick, well-fitted sow, a trifle short in the middle. Lookout sired a good pair in Starlight and Twilight, smooth, well-fitted litter sisters. Lady Cherokee 1st was such a good type that she won the junior championship. With good feet, size and smoothness, she is a very pleasing prospect for the junior yearling class next year. Herds were a fine exhibit. Wickfield Farm and Messenger divided most of the first and seconds. Lookout sired the first get of sire. It was in all a strong show followed with much enthusiasm and boosting for the belted breed.

Exhibitors—C. S. Bratt, Arapahoe, Neb.; F. C. Cole, Thurman, Ia.; J. Finnell & Son, Hamburg, Ia.; H. C. Glissman, Oamha, Neb.; Hopley Stock Farm, Atlantic, Ia.; A. D. Jones, Litchfield, Neb.; D. A. Jay, Blakesburg, Ia.; J. R. Lewis, Renssalaer, Ind.; Clayton Messenger, Keswick, Ia.; C. L. Moore & Sons, Tremont, Ill.; E. N. Manley, Lyons, Neb.; E. L. McCoy, Rockport, Mo.; C. B. Nelson & Sons, Oakland, Neb.; C. P. Paulsen, Nora, Neb.; R. L. Pemberton, LeGrand, Ia.; V. Patterson, Fairmont, Neb.; C. O. Robertson, Rockport, Mo.; J. N. Summers, Malvern, Ia.; S. E. Saar, Henderson, Ia.; Wickfield Farm, Cantril, Ia.; M. Whitaker, Miami, Mo.; J. Wernet, Woolstock, Ia.; W. F. Yinkst & Son, State Center, Ia.; Carl Schroeder, Avoca, Neb.; J. S. Curren, Silver Creek, Neb.; W. E. Mitchell, Walnut, Ia. Judge, A. A. Goodenough, Morrison, Ill.

Aged boar (13 shown), 1st Manley on The Senator, 2d Schroeder on Harold, 3d Wickfield Farm on Captain Silko, 4th Paulsen on Cherokee Pattern, 5th Moore & Sons on Col. Lakeside, 6th Patterson on Manley's Duke, 7th Wickfield Farm on Lookout Chin Chin, 8th Lewis on Pacific; senior yearling (11 shown), 1st Lewis on Iowa Boy 5th, 2d Yinkst & Sons on My Rambler, 3d Messenger on Peerless Boy, 4th Saar on Palmer's King 10th, 5th Summers on Busy Jim, 6th and 7th Pemberton on Concillis and Sunny Brook Duke 3d, 8th Wickfield Farm on Lookout Perfection; junior yearling (18 shown), 1st Lewis on Boulder Duke, 2d Wickfield Farm on Wickware Favorite, 3d Manley on True Tipton, 4th Bratt on Budd, 5th Manley on Challenger, 6th Jones on Prince's Boy 3d, 7th Messenger on Hawkeye Star, 8th Roberson on Trade Mark; senior pig (19 shown), 1st Jones on General's Best 1st, 2d Hopley Stock Farm on Homestake, 3d Jones on General's Best 2d, 4th Finnell & Son on Finnell's Giant, 5th Wickfield Farm on Lookout Reminder, 6th Manley on Senator Again, 7th Messenger on Sioux Lad 2d, 8th Pemberton on Look Out Lad 2d; junior pig (40 shown), 1st Manley on Young Senator, 2d and 3d Roberson on Missouri Chief, and Missouri Lady, 4th Whitaker on Cherokee Ideal's Best, 5th Jones on General Jones Jr., 6th Manley on Nebraska Senator, 7th Cole on Sir Richard, 8th Yinkst & Son on Longfellow's Goal 20th.

Aged sow (20 shown), 1st Wickfield Farm on Polly Lookout, 2d Manley on Cecelia, 3d Lewis on King's Sister, 4th Messenger on Lady Dawson 4th, 5th Lewis on Lola C., 6th Messenger on Dorotha's Best, 7th Bratt on Ruth, 8th Lewis on Belva; senior yearling (13 shown), 1st Wickfield Farm on Roxy Lookout 2d, 2d Lewis on Venus 2d, 3d Lewis on Lady Malow, 4th Wickfield Farm on Lookout Girl, 5th Wickfield Farm on Fairy Wickware, 6th Lewis on Progressive Lass, 7th Messenger on Mayflower Lady 2d, 8th Schroeder on unnamed; junior yearling (27 shown), 1st Wickfield Farm on Cherokee Pearl, 2. Messenger on Lady Steele, 3d Messenger on Flora, 4th Lewis on Miss Dude, 5th Manley on Tipton Missie, 6th Wickfield Farm on Lookout Pearl, 7th Whitaker on Ruby, 8th Lewis on Belvia D.; senior pig (17 shown), 1st Wickfield Farm on Lookout Starlight, 2d Wickfield Farm on Lookout Twilight, 3d Messenger on Sioux Lady, 4th Messenger on Sioux Lady 2d, 5th Jones on Dixie Girl 2d, 6th Manley on Duke's Pride, 7th Manley on Duke's Rose, 8th Jones on Fannie's Beauty 1st; junior pig (39 shown), 1st Paulsen on Lady Cherokee 1st, 2d Manley on Senator Girl 2d, 3d Moore & Sons on Moore's Queen 1st, 4th Moore & Sons on Moore's Queen 2d, 5th Summers on Miss Ruth, 6th Cole on Miss Kate, 7th Cole on Marion, 8th Jones on Fair Beauty.

Old herd (13 shown), 1st and 5th Wickfield Farm, 2d and 7th Manley, 3d and 8th Messenger, 4th and 6th Lewis; young herd (12 shown), 1st Wickfield Farm, 2d Messenger, 3d and 4th Manley, 5th Jones, 6th Paulsen, 7th Cole, 8th Whitaker; herd bred by exhibitor (17 shown), 1st, 6th and 8th Messenger, 2d and 5th Manley, 3d Wickfield Farm, 4th Lewis, 7th Jones; get of sire (22 shown), 1st Wickfield Farm on get of Lookout, 2d Messenger on get of Messenger Boy, 3d Manley on get of Senator, 4th Wickfield Farm on get of Lookout, 5th Lewis on get of Dudie, 6th Manley on get of Gen. Tipton Again, 7th Messenger on get of Hawkeye Lad, 8th Wickfield Farm on get of Gen. Wickware; produce of dam (19 shown), 1st and 2d Messenger, 3d Lewis, 4th Moore & Sons, 5th and 6th Manley, 7th Paulsen, 8th Saar.

Senior and grand champion boar, Manley on The Senator; junior champion boar, Manley on Young Senator; senior and grand champion sow, Wickfield Farm on Roxy Lookout 2d; junior champion sow, Paulsen on Lady Cherokee 1st.

SPECIAL CUPS.

Nebraska State Board of Agriculture, Manley; Hampshire Advocate, Roberson; Union Stockyards Co., Roberson; Journal-Stockman, Paulsen.

The Ohio Station chemists have found that it is not correct to speak of soils that need lime as being "acid." So-called soil acidity is a condition brought about by the absence of lime, but the reaction ordinarily accepted as an indication of the presence of acids is not produced by acids but, as said before, by the absence of lime. If there should be any acid in the soil, these scientists say that it has little or no effect on the crop. A deficiency of lime in many cases accounts for a relatively low yield that is attributed to the presence of acids.

All Your Battery Needs

Distilled water every two weeks, regular hydrometer tests, and occasional thermometer readings when you're running your car long distances—that's the most, and the least, you can do for your battery.

Make sure of that little difference between a dead battery and a live one, high cost of electrical power and low.

Even the best battery will wear out some day. Before that time comes, write for information about the Still Better Willard with Threaded Rubber Insulation. Our booklet, H-10, "The Story of 196,000 Little Threads," tells all about it, and the remarkable record it has made in a two years' test on 35,000 cars.

In and Around Wisconsin

The United States Department of Agriculture and the food administration have taken steps to hold sufficient good wheat and rye seed to sow next year's crop. To this end an exemption will be placed upon the thirty-day storage limit on lots of grain examined by the seed committee and found to be good for use as seed. Such lots will be kept for seed purposes until the end of the next seeding season. Warehouse men and elevator operators in the spring-wheat belt are advised to send samples of grain which they desire to have for seed to Mr. W. S. Oswald, 326 Flower Exchange Bldg., Minneapolis, Minn., for examination.

Andrew Bidlingmeier, who delivers milk to the Otter Creek cheese factory in Sheboygan county, received within 95 cents of $700 as payment for his milk for the month of August. This comes near being a record for one month's milk checks.

The Dodge county council of defense has invited farmers of the county to provide them with a list of cows for sale and this list is to state the number and ages of these cows. The council of defense proposes to compile a list of cattle for same in the county in order that the demands of outside buyers for carload lots may be more conveniently met. The council of defense has also had calls for feed in carload lots, especially for oats and alfalfa hay.

Reports from sales of barley in Washington county show that farmers who raised barley this year will realize a good sum for their work. The two malt houses at Hartford and the grain elevators have been busy buying up barley and paying $2.80 per hundred pounds, which is $1.68 per bushel. The average yield in this section is about forty bushels, while in some sections it goes as high as fifty bushels per acre.

By act of the legislature the stallion enrollment was transferred July 1, 1917, to the United States Department of Agriculture, but Dr. A. S. Alexander still remains in charge, having been appointed director of horse breeding of the department. All enrollment certificates and licenses of public service stallions expire January 1, 1918, and must be renewed before April 1, 1918. Owners of stallions should apply at once for new blanks in order to receive new certificates dated January 1, 1918. Stallions not previously enrolled may be enrolled now for 1918. The first cost fee for certificate is $2 and for renewal, transfer of ownership or duplicate of certificate 50 cents. In 1917, 1,771 pure-bred and 1,077 grade and scrub stallions had licenses for public service, the percentage of pure-bred sires being 61.5, as compared with 35 per cent in 1907.

R. Baker, assistant secretary of the Wisconsin Live Stock Breeders' Association, furnishes The Wisconsin Farmer with a timely clipping from the Evansville (Wisconsin) Review as follows:

There is no animal more loved and more faithful than a dog. Yet dogs can be a nuisance and an injury unless carefully watched. Recently one of our citizens lost eleven fine sheep by the ravages of midnight prowling dogs. Being of a retired nature this citizen and his family made no public complaint, but bore the pain and monetary loss within their own circle. A conversation, however, brought out the story and the question arose if dogs should not be kept chained or muzzled when not out with their owners? That one night's depredations cost more to this law-abiding Evansville booster than the dog taxes of the whole city. Would it not be a good thing for the "city fathers" to consider this matter, enact protective laws and see that they are enforced? Pets should not be allowed to be pestiferous.

No matter how much we love the dogs we can't afford to let them kill the sheep.

At a recent meeting held in Calumet the Holstein breeders of the county organized a county association. The meeting was called to order by J. J. Garland, emergency agricultural agent. S. H. Bird, vice president of the Wisconsin Holstein-Friesian Association, spoke of the work of the Fond du Lac Breeders' Association. He said the demand for pure-bred cattle is constantly increasing and that there is a wonderful opportunity for Wisconsin breeders to make this state a market place for dairy foundation stock for the entire West. Dr. Royal Klofanda, of Brillion, spoke on the advantages of having a breeders' association in the county so that someone may be appointed to show visitors around to the various herds. In this way the time of the visiting buyers may be conserved. Furthermore, in a community that is organized the salable stock is listed so that the proper officer of the association may tell prospective buyers just about what they have to offer. The organization in Calumet county was perfected with the following officers:

President—A. T. Hipke, New Holstein.
Vice President—Wm. Seybold, Forest Junction.
Secretary—Dr. Royal Klofanda, Brillion.
Treasurer—J. G. Finnegan, Chilton.
Director—John Pfingsten, New Holstein.
Director—Alex Pilling, Chilton.

Those present, who signed the constitution and became charter members, were as follows:

Wm. Koch, Jr., Brillion; Walter Tesch, Brillion; H. Merrill & Son, Chilton; J. H. Meyer, New Holstein, R. 1; H. M. Libke, New Holstein, R. 3; Rud Jochimsen, New Holstein, R. 3; Finnegan Bros., Chilton; Pilling Bros., Chilton; John Seybold, Forest Junction; O. H. Leverenz, New Holstein; C. G. Weber, New Holstein; Jas. G. Griem, New Holstein; Jos. Wenninger, Chilton; John Salm, Chilton ;H. A. Fiedler, Hayton; Wm. Knauf, Chilton, honorary member.

The members enrolled in this association own over 200 head of pure-bred Holstein cattle. Members with grade herds are permitted to join the association provided they use a pure-bred registered Holstein sire. The membership fee is $1 and the dues $1 annually.

Forward-looking farmers are making necessary repairs on their machinery before putting it away for the winter.

UPPER WISCONSIN

Experience in Cleaning and Plowing Stump Land.

To the Editor:—A farmer living near Pine River, Minn., in the past four years has cleared and put under crop forty acres of land. He has done this largely with his own labor and such help as almost any farmer may employ. This season in addition to his farm work he is clearing and plowing ten acres on an adjoining farm of stump land under contract at $18 an acre.

The land being cleared at the price mentioned is cut-over Jack pine land that has about 150 stumps to the acre, averaging ten inches in diameter, and from 50 to 75 white oak grubs per acre. The trees were cut six years ago. There is practically no brush or second growth except the white oak grubs.

This farmer's clearing force consists of himself, his team of horses, a $130 two-horse stump puller, a town boy twelve years old to drive the team, and a fourteen-year-old boy from a neighboring farm. The town boy is paid $10 a month and his board and the farm boy $1 a day. The farmer, before going to his farm four years ago, had been a carpenter and contractor in the city for twenty years. When he went on his land it had no clearing. He commenced by making a thorough study of the problem of land clearing, and found the stump puller the best means of clearing land of small stumps.

I found this farmer in the field with his crew at 7 o'clock in the morning. He was pulling from thirty to fifty stumps and grubs an hour, counting in the time required to move the stump puller from one setting to another. He used a root plow for grubs, stumps that had decayed tops and burned-off stumps.

The stumps after being pulled were placed in small piles by hand mostly. One horse was used for dragging in the larger stumps. From ten to fifteen piles were made to the acre. From four to five acres were piled a day. When the stumps were dry they were burned. The plowing was done with a fourteen-inch plow and three horses. About one and a third acres were plowed a day.

This farmer cleared up and plowed an acre of cut-over Jack pine land in a little less than two days of his own labor, a little less than two days of his team, and a day and a half for each of the boys. The stump puller was second hand and the farmer estimated that it had probably cleared 300 acres of land in the neighborhood. Three pounds of dynamite were used per acre to blow out anchor stumps.

A. J. McGuire.

Agricultural Extension Division, University of Minnesota.

LAND CLEARING AND PLOWING CONTRACTED AT $18 AN ACRE BY H. E. HOLLINGWORTH, PINE RIVER, MINN.

JACK PINE TIMBER ON HOLLINGWORTH FARM, NEAR PINE RIVER, MINNESOTA.

Fall Plowing Preparedness.

To the Editor:—The time is at hand when the farmer and gardener on heavy clay soil should prepare for the next spring drive by carefully fall plowing his land. The results obtained on our clay experiment station have shown conclusively the need of fall plowing for all crops, but particularly for spring grain and peas. Land properly fall plowed can be sown just as soon as dry in spring and even before the frost is sufficiently out of the ground to plow. This enables the farmer to get in his wheat, barley, peas or oats real early, and with a minimum amount of work. Not only that, but winter freezing pulverizes the soil, making plant food more readily available. Spring-plowed land, on the other hand, is nearly always cloddy and in such shape that the growing crop has difficulty in obtaining the needed plant food supply.

Garden land and land intended for cultivated crops should also be plowed in the fall, for it often happens that spring rains so delay plowing that these crops do not go in in time. Manure can be applied on the plowed land either in winter or spring and carefully disked in.

Proper and timely plowing is the most important factor of success on the heavy soils. Therefore, it should command the crop growers' most careful attention. Coupled with this comes that of proper draining. Fields should be plowed in lands twenty-five to thirty-five feet wide with good dead furrows left to collect and carry away the surface water. These should be connected to some good outlet.

Be prepared, and fall plow your land.

E. J. Delwiche.

An Easy Pulling Road

EVERYBODY knows that it is easier to haul on a concrete road than on any less rigid surface. But few realize how great is the difference. This has been recently determined by tests made with a dynamometer by Prof. J. B. Davidson, Agricultural Engineer, University of California, made for the Good Roads Bureau of the California State Automobile Association.

A 3-ton load was hauled over various types of roads in the same locality on the same day, the same horses and drivers being used. The dynamometer recorded tractive pull in pounds per ton of load as follows:

	Pounds
Over a level, unsurfaced concrete road	28
Concrete base, ⅝-inch skin top asphaltic oil and screenings	49
Waterbound macadam, level, good condition	64
Concrete base, 1½-inch Topeka top, level, good condition	68
Gravel road, good condition, level	78
Earth road, fine dust, level	92
Earth road, stiff mud on top, firm underneath, level	218
Loose gravel, not packed down, new road, level	263

Remarkable showing for concrete—less than half the tractive force required over a good stretch of waterbound macadam, less than one-third that required on dirt or packed gravel, about one-tenth the pull required on loose gravel.

Concrete on Cameron Road, Hamilton, Co., Ind. Wm. H. Boeh, Engineer.

There are 30,000,000 horse-drawn vehicles in this country, most of them on farms, and 3,500,000 motor cars and trucks. The waste of horse power, of time, and motor fuel involved, not in poor roads, but in all roads less desirable for traction than concrete, is enormous. Besides this waste, the United States Office of Public Roads estimates that $200,000,000 per year is paid out indirectly for bad roads in extra cost of food. What is paid out for maintenance of roads that wont stay built is incalculable. It runs into hundreds of millions more. The excess consumption of gasoline is another huge item which motor car owners have to pay.

CONCRETE ROADS
Their Advantages
No Mud—No Dust
No Ruts—No Holes
No Slipping
No Skidding
Easy Hauling
Smooth Riding
Long Life—Safety
Always Ready for Use
Low Maintenance
Moderate Cost

Can any community afford to neglect its highways in view of these facts, or to build them of any material less enduring or less desirable for traction than CONCRETE? Its construction cost is lowest in the end and its upkeep cost is lowest from the start.

Be sure you know what a concrete road is. Concrete is made of portland cement, sand and pebbles or crushed stone, and water. It is hard and durable. Concrete is the material used in dams, factories, bridges, and big engineering works like the Panama Canal requiring great solidity and strength.

Let us give you some interesting figures. Write for free copies of Bulletins Nos. 107 and 136.

CONCRETE FOR PERMANENCE

Increased Potato Yield.

As a result of the work of the agricultural committee of the Polk county council of defense the potato yield in the county has been greatly increased this year. Last May this committee discovered that there was a shortage of potato seed. The county agent found that a carload of good seed potatoes was held in storage at Osceola. A mass meeting of growers was held and these men agreed to pay for 229½ bushels of seed potatoes at the rate of $2.65 per bushel with the understanding that a bushel and one-half of seed should be returned for every bushel furnished for seed last spring. The agricultural committee of the council of defense bought the entire carload of 789¼ bushels and sold it out in small lots. This single action of the council of defense has increased the production in Polk county at least twelve to fifteen carloads.

Utilizing School Labor on Farms.

To the Editor:—Relative to the work of securing boy labor to help pick up potatoes on Saturday, I have done a little of this this fall, but not enough to make a splurge over it. Last Saturday I sent out about twenty boys, taking some out myself and had one of the business men take out some more. The men who got the help certainly appreciated the lift. Potatoes are a big crop in Langlade county this year; still the average farmer seems to have but little difficulty in getting the help he needs.

Some of our country schools closed for a week, others for two weeks during the potato-digging season. I think about 40 to 50 per cent of the schools had a potato-digging vacation.

I advertised in the papers that I would secure help on Saturday for all who applied, but received a very few applications. If the farmers had been in need of help they surely would have written me. The plan of closing schools I think was largely responsible for solving the problem. Another item has been the exceptionally fine weather we have had for the past three weeks, permitting farmers to dig without practically an interruption.

F. G. Swoboda.

County Representative Langlade Co., Wisconsin.

Forty-five farmers living in southern Dunn and eastern Pepin counties recently organized a cow-testing association which will be known as the Dunn and Pepin counties cow-testing association No. 4. The tester is Alf Honaas, a graduate of the Dunn County School of Agriculture, and who has also had one year's study at the Iowa State Agricultural College at Ames, Iowa. Julius Ausen, of Eau Claire, northern Wisconsin field man for the college of agriculture at Madison, and D. P. Hughes, principal of the Dunn county school, assisted in the organization.

Feeding Dairy Cows.

To the Editor:—There are two main factors which control the profitable production of milk and butter fat. One is the individuality of the cow, her adaptability for milk and butter fat production. It is a potential quality of each individual cow and depends entirely on her breeding. The second factor is the food, care and management given, which is entirely under the direct control of the dairyman and upon it depends to a great extent the profitable production of milk and butter fat, provided, of course, that the cow is of the right sort.

In a sense the dairy cow is a manufacturing plant and just as in the case of any other factory it is run most economically near its full capacity. There is an overhead expense, the maintenance ration, which goes on continually no matter how much the cow produces. This maintenance ration is largely fixed for each animal. In the case of a cow giving an ordinary quantity of milk this amounts to about 60 per cent of the food consumed. When the cow by more liberal feeding gives a large quantity of milk the maintenance ration amounts to 50 per cent or even less of the food eaten. Thus the importance of liberal feeding of the good milk and butter fat producer can readily be understood for economy in production.

To get the most profit from cows they must be fed a balanced ration. To get a balanced ration I find the following is very satisfactory: Corn silage, thirty pounds; alfalfa hay, twelve pounds; corn meal, five pounds, and ground oats, two pounds. This ration is for a cow weighing about 1,000 pounds and producing about thirty pounds of 4 per cent milk daily. Moreover, it is a home-grown ration and one that is grown on a great many farms.

Another good ration for a 1,000-pound cow is to give all the alfalfa hay the cow will eat, together with thirty-five to forty pounds of corn silage and an additional pound per day of either ground corn, corn and cob meal or corn bran for every four pounds of milk she produces. Light milkers should get a little less hay than heavy milkers. Moreover, heavy milkers should have in addition to the above-named ration a little wheat bran.

Still another excellent home-grown ration consists of alfalfa hay or cowpea hay, ten pounds; corn silage, thirty pounds; wheat bran, two pounds; corn meal, four pounds, and cottonseed meal, one pound. In the absence of alfalfa or cowpea hay, fourteen to sixteen pounds of nicely cured clover hay will give good satisfaction.

To feed cows economically they must be fed as individuals and not as a herd. This, of course, means that the feeder must determine just how much each cow can consume to the best advantage. Very frequently all the cows in the herd are fed exactly the same amount regardless of what the cow produces. Some cows are thus overfed while others do not get enough.

It is not exactly necessary to weigh out all the feed separately for every cow. This would be slow work where a number of cows are kept, but if we take 200 pounds of bran, 400 pounds of corn meal and 100 pounds of cottonseed meal and mix them thoroughly, then measure out a certain amount and weigh it we can with a standard measure apportion the feed just about as it should be. If, for instance, we use a can or pail which holds two pounds of the mixture there will be no difficulty in knowing just how much is being given to each cow. For instance, if three and a half measurefuls are given to a cow she will be getting seven pounds. If to another cow two and a half measurefuls are given she will be getting five pounds. Someone may ask why not have an eight-pound measure. In my opinion that would not be practical, as we would not be able to measure out smaller rations nearly as accurately as when we have a smaller pail.

Then for the silage we can have a basket which holds, say twenty pounds. With this it is very easy to give a cow thirty, thirty-five or forty pounds, as the case may be. For hay it is not long before the experienced feeder can determine after weighing several bunches just about how much he is giving to each cow. For instance, weigh out twelve pounds of hay. Then lift it carefully several times with the fork. After that there will not be much difficulty in getting pretty near to the twelve-pound mark when the hay is being distributed. If the hay is baled, as all hay should be, one can feed so many blocks after the amount desired has been weighed and will be giving just about the same amount at every feed.

It is quite essential to study each cow separately. We must know which one will consume twelve pounds of hay or twenty pounds. Each cow should get all she wants, that is, all she will eat up clean at every feeding period.

Still another important point is to feed regularly. It would seem that this matter has been harped upon so much that it does not need repeating, but one would be surprised upon going among dairymen to find how few are very careful about this. Particularly does this apply to farmers who keep a few cows and make the production of milk and cream a side issue. If cows are fed at stated intervals they will not be worrying for feed and in this way be reducing the amount of milk they produce. From one to three ounces of salt should be given each cow daily, or, better still, keep salt bricks in convenient places so that the animals can consume such quantities as the appetite demands.

Questions and Answers.

An Address.

I have a Flanders motor car that has a rear axle and transmission made by another company. It was made by the W. M. Company. Will you please publish the name and address of this company?

Answer.—Your axle was probably made by the Weston-Mott Co., of Flint, Mich.

Upright Boiler Placed Horizontally.

I would like for you to answer the following questions in your paper. If a small upright boiler were laid horizontally and suitable sides and firebox were made to fit so that the fire would first pass under the boiler and back through the flues; would there be any objection if the fires would pass over a handhole plate? Would this arrangement increase the horse power of the boiler, and how much?

Answer.—The above arrangement would not increase the capacity of the boiler noticeably. If the handhole cover is placed toward the front end of the furnace, there would be danger of the drawbolt burning off. The danger would not be so great if the handhole cover is at the rear of the furnace.

Blasting.

I have heard that a blasting machine can be made by using dry cells. Please publish direction at your earliest convenience.

Answer.—A blast may be ignited by dry cells in the following manner: Connect six or more dry cells in series. From one of the terminals run a wire to a switch; from the switch run an insulated copper wire to the powder and run another insulated copper wire from the other battery terminal to the powder. Remove the insulation for about one inch on the end of each wire and scrape the wire bright. Leaving the ends about half an inch apart, connect a very fine iron wire between them, wrapping the iron wire many times around the two copper wires so as to obtain good contact. Insert this iron wire in the powder, tamp the powder as usual, and, when ready to explode the powder, close the switch. The current from the batteries will heat the iron wire red hot. The longer the copper wires the smaller the copper wires and the larger the iron wire, the more the batteries required. It is best to put the outfit together and try it without any powder so as to make sure that enough dry cells are being used. If the iron wire melts, so much the better, but it must be heated red hot.

Ford Engine Misses.

My Ford engine is not working very well. It seems to miss or choke and then spit. I have tried a new carburetor and a new timer. I have all new valves, and have ground them in well; but nothing seems to help. What is the trouble?

Answer.—There are many things that could cause your trouble. The gas mixture might be too rich or too lean. One or more spark plugs might be dirty or have cracked porcelains. The coil vibrators might not be properly adjusted. There might be an air leak into the intake manifold or around the valve stems. The exhaust valve springs might be weak. Too great a clearance between the valve stem and push rod could cause the trouble. The spark plugs might have a gap too narrow or too wide.

Try your compression on each cylinder. If the compression is poor in any cylinder learn the cause. This might be leaky valves, poor fitting or worn-out rings, or a scored cylinder. Vary your gasoline mixture until you get the best mixture possible. See that the spark plugs are clean and in good order, and that the points are just far enough apart to pass a smooth dime between them. Squirt a little gasoline on the joints of the intake manifold and around the valve stems while the motor is running. If the motor speeds up or slows down there is an air leak that is causing trouble. Remove the cover of the coil box and notice the vibrators while the engine is running. See that they are all working properly. If your car is three years old the insulation on the magneto coils may have become rotten and new coils would then be necessary.

Engine Uses Too Much Gasoline.

What is the trouble with a Fuller and Johnson nine horse-power gasoline engine when it uses too much fuel? It has good power. It uses dry cells for ignition. Would a magneto be better? Would a weak intake valve spring cause the trouble? Will an old gas engine take more fuel than a new one? Would a different carburetor help?

Answer.—If your engine is fitted with a carburetor, the adjustment of the carburetor is probably at fault. If you have an intake valve operated by the suction of the engine a stiffer spring might stop the trouble. You can stiffen the spring by removing it and stretching it. Since you have good power, your ignition must be at least fair; the spark might be timed a little late, and this would cause an excessive use of fuel. While a good magneto is better than batteries for ignition, we would not advise you to make the change, as there would be considerable expense; and your battery ignition should be satisfactory. If the compression is good on all cylinders, an old engine should not take any more fuel than a new one. Write to the manufacturer of your carburetor for instructions as to adjusting it. If possible, give the size and model of the carburetor. If the carburetor has a cork float the float may have become "water-logged," in which case a new float should be used.

A Toy Steam Engine.

I am sending you a plan of a miniature steam engine that I would like to make; but first I would like for you to tell me whether it will work. In Figure 1, P is the piston rod, R the connecting rod, F the flywheel, C the crank disk, E the exhaust port and V the valve, operated by the U-shaped strap U. The plan is for the steam to come from the boiler and enter the cylinder until the valve shuts it off; then at the end of the stroke, the piston passes the exhaust port and the steam escapes. The momentum of the flywheel would carry the piston back, the same as in a four-cycle gas engine. Will it work? How can I make a piston that will not leak the steam?

Answer.—If the parts are well made and properly proportioned, this plan will work, but not very efficiently. The

FIGURE 1.

power will all have to be obtained from the steam expansively. The valve should cut off the steam at half

FIGURE 2.

stroke; the cylinder made rather long, and the exhaust port placed well to the end. A somewhat more simple arrangement is shown in Figure 2. Figure 3 shows the arrangement of an oscillating cylinder such as is often

FIGURE 3.

used on toy steam engines. The cylinder is mounted on the side of the boiler near the top. It pivots about the pin, P. A hole is drilled at each end of the cylinder to admit and exhaust the steam. EE are exhaust

ports. In one position, the steam escapes through the exhaust and is admitted at the other end. When the crank turns half way around the cylinder changes position so that the steam enters in the opposite direction.

Grades Not Good Enough.

(Continued from page 1.)

ords. Later on when his dam showed she was able to produce nearly thirty pounds of butter in seven days he was brought back and his offspring have been uniformly good. Then came a son of Homestead Jr. DeKol, then Canary Jessie Fobes, of noted ancestry, then a son of a thirty-one-pound bull was used, and finally Sir Colantha Fobes Homestead, now junior herd bull, by Hamilton Colantha Lad, twenty-eight-pound sire and out of Bertha Hamilton Gelsche, also a twenty-eight-pound cow. Sir Colantha Fobes Homestead's thirteen nearest dams average twenty-eight pounds, and he is out of Jessie Fobes Homestead Maude, twenty-pound three year old out of a thirty-one-pound daughter or Homestead Jr. DeKol.

Five generations are represented in the herd today. The accompanying picture shows four generations and is typical of the profitable side of pure-bred farming. Hengerveld Model Aaggie Grace, 24.5 pounds, has had four daughters and two sons so far. She was one of the foundation cows. Her daughter, Duchess Aaggie Grace, made a record of 26.5 pounds and had four daughters and two sons. The daughter, Bluebird Canary Duchess Grace, has a record of seventeen pounds as a three year old, and has two daughters, one of which, Bluebird Canary Grace Duchess, is shown in the picture. No records have been possible as yet with these last heifers.

All of the offspring of Mr. Bird's foundation cows have already made creditable records or are under test with good prospects of high records. Their names will soon be listed under the A. R. O., which will add much to their value. One cow purchased about ten years ago has increased to fifteen head, each offspring more valuable than the foundation cow was at the time of purchase. Not only milk, but also calves highly in demand have resulted from the purchase of this one animal. With pure breds the work is more profitable each year; with grades the profits are limited to milk and a standard price for grades. There is no limit in price with pure breds.

Mr. Bird has won not only the respect of Wisconsin Holstein men, but also of breeders from other states. He is vice president of the state association and is similarly honored by the national association.

Besides the Holsteins Mr. Bird raises pure-bred Berkshires and Scotch Collies. His boys are made owners of stock at an early age, and the interests of the farm are better taken care of because of this. Even Mrs. Bird, who helps with the pedigree work, can rattle off Holstein families with a speed that will trouble the pedigree experts to follow.

Notice in Regard to Moisture in Cheese.

To the Editor:—On or about April 15, 1917, the legislature of this state amended the standard and definition for cheese, making American or Cheddar cheese containing more than 40 per cent of moisture adulterated cheese. Under the law the sale of adulterated cheese is made a misdemeanor punishable by fine or imprisonment.

This law has now been in force for about six months and we feel that the cheesemakers and factory operators have had ample time to become acquainted with the law and should now be in a position to meet its requirements. It is the intention of this department to see to it that the law is enforced and hereafter where American or Cheddar cheese containing more than 40 per cent of moisture is sold, prosecution will be brought.

George J. Weigle.
Dairy and Food Commissioner.

More on Cost of Producing Milk.

To the Editor:—In my judgment of figuring out the basis of present prices of feed, grains used in producing milk, including ensilage, hay and bedding and also man and horse labor costs and maintenance of herd, I would say that it costs $3.20 to produce 100 pounds of whole milk. I base this upon the average cost of feed and labor as these costs have been determined by experience in the cow-testing association in which my herd has been included. I am not taking into account a considerable amount for incidentals such as the upkeep for equipment and interest on investments, which I believe can be balanced off against the value of the manure and the value of the calf each year. I believe it is perfectly fair to do this. The following formula will help to arrive at the feed cost for 100 pounds of whole milk:

Forty-four pounds grain, 188 pounds ensilage, fifty pounds hay, 17 cents' worth bedding, 15 cents for maintenance of herd.

Add 10 per cent to this cost of production and you have what I believe is a fair winter price for whole milk.

The Meeting of Cabbage Growers at Racine.

The annual meeting of the cabbage growers of Racine and Kenosha counties interested in the production of resistant varieties of cabbage took place at the Chickory Road schoolhouse Saturday, October 6th. These growers realized years ago that unless careful and painstaking efforts were not brought forward the cabbage industry of the two counties could not continue. The ene .y of cabbage in this section is a disease known as cabbage yellows. This attacks the roots of the cabbage plant either in the seed bed or within a short time after transplanting. Plants become stunted and the leaves turn a pale yellow. There are many other diseases which the cabbage grower has to contend with, such as black rot, soft rot, club root and blackleg. However, the cabbage yellows have done more damage than the others and are more difficult to control.

Through all the troubles and financial losses the growers of Racine and Kenosha counties have been forced to use every means possible of insuring themselves from loss. Neither seed treatment, rotation nor soil treatment has proved practical or effecitve. For a number of years now with the cooperation of Dr. L. R. Jones, of the university, these meetings held annually at Racine have proved of inestimable value in overcoming all obstacles of the cabbage growers. Since 1910 Dr. Jones has developed a disease-resistant cabbage which can be grown profitably in Wisconsin. Only two kinds of cabbage are acceptable to the growers of the state, the kraut and the winter storage cabbage. One has been developed and is known as the Hollander No. 8. Others are still being tried out.

USE OF SPRAYER HAS PROVED INVALUABLE IN CABBAGE DISTRICT.

During all the years of Dr. Jones' efforts to produce the resistant variety the growers have worked with him and assisted him in every way possible. They have formed a committee for the seed selection and distribution of this Hollander type which is in close touch with the experimental work done by Dr. Jones.

W. F. HAUSCHE CABBAGE AND ONION STOREHOUSE NEAR RACINE, WISCONSIN.

The yellows are a fungous disease which lives in the soil. Soil once infested by these fungi cannot raise cabbage again for a great many years. It has been known to affect the cabbage crop even after six or eight years in clover or other crops. Such soil is called "cabbage sick" soil. The picture shows one of the commercial varieties of cabbage seeded in one row of the field with only a few surviving heads. To the right and left the rows are producing well-formed heads weighing from five to ten pounds each. The center row did not have the resistant variety of cabbage planted and consequently the plants died after a few weeks in the field. From the remaining heads, which resisted the attacks of the disease, seed can be developed which will grow well even on "sick soil." That is the process Dr. Jones followed in his experiemnts.

There will be very little surplus seed this year. The growers, however, around the Racine and Kenosha district will have enough to supply their needs. The seed committee takes care that the local districts are supplied first and Wisconsin growers are given preference in the sale of the surplus.

At the meeting spraying came in for its share of discussion and it was the general opinion that more frequent applications during the season would be profitable and advisable. Iowa growers in the Muscatine district are known to spray as frequently as five times each season. The time to spray for the cabbage worm can well be gauged by the appearance of the white butterflies, which begin to lay their eggs about the middle of July. Within ten days the cabbage plants should be sprayed with a solution of two pounds of arsenate of lead paste or one pound of the powder to fifty gallons of water. Calcium arsenate applied at the same rate will perhaps prove considerably cheaper and fully as efficient. A "sticker" must be added to the spray to cause it to adhere to the plant. This usually consists of two pounds of soap added to each 50-gallon batch.

A. J. PIPER FIELD SHOWED NO DAMAGE FROM "YELLOWS."

The most interesting part of the day was the field trip. An inspection of the fields of cabbage and onions in storage brought out all the points discussed during the meeting. In one field was seen the result of black rot and yellows. The black rot can be controlled by seed disinfection, soaking the seed for twenty minutes in a solution of one part formaldehyde to 250 parts of water. This treatment will also prove effective against blackleg. Only a few of the plants in the field inspected, however, had succumbed to black rot or yellows.

Dr. Jones led the discussions and was ever ready with the right answer to such questions as came up.

Dry Dip Your Hogs and other Live Stock with Protexol

The STANDARD Dry Dip

Rids the stock and premises of lice and other vermin. Kills cholera and disease-spreading germs.

Protexol is a concentrated, powder-form disinfectant, prepared especially for winter use. No solution to mix, no dipping. Simply sprinkle lightly on the stock and in their sleeping places.

Better than liquid dip; stronger, cheaper, easier to use, safer.

Avoid wetting your hogs. Protexol kills the vermin and disease without exposure or risks. Keeps your stock safe—makes quarantine unnecessary.

Keeps horses, cattle and calves free from lice. Effective for poultry houses and general uses.

A Standard, Guaranteed Disinfectant, used regularly by thousands, sold by all leading dealers. Sample free on request.

How to Make Soups That Nourish.

Although clear soups, which are largely water, contain little nourishment, some thick soups, broths and chowders are literally a meal in themselves, according to the dietary specialists of the United States Department of Agriculture. Even a thin soup, taken at the beginning of a meal, by its warmth and pleasant flavor may stimulate digestion so that the heavier foods are more easily digested. The combination of soup and bread is pleasant and leads to the eating of more bread or crackers than would be consumed ordinarily. Appetizing soups also may be made often of materials which otherwise would be wasted. In this way such materials are made to contribute whatever food value they may have for the cost of the labor and fuel needed to prepare them.

One of the purposes which food serves in the body is to furnish energy for its muscular work, and one way of comparing the relative food value of different foods is to compare the amounts of energy which they furnish, or, as physiologists call it, their fuel values. A cup (i. e., one-half pint or a large soup plateful) of milk soup flavored with vegetables yields a little more energy to the body than the same amount of milk. A thick meat soup with pieces of meat and vegetables in it, a fish chowder, or a rich vegetable soup, such as cream of tomato, yields half again as much energy as the milk, while a thin soup like bouillon, consomme, or clear tomato soup, yields not quite two-thirds as much as the milk, and less than half as much as the thick soup or chowder. A generous serving of thick meat soup or fish chowder yields more energy than an ordinary portion of roast beef, and even a moderate helping of vegetable milk soup usually furnishes fully as much body fuel as a moderate-sized rib chop of lamb.

There are other things to be considered besides energy in connection with the food value of different kinds of food. One is the amount of the substance called protein, without which the body cannot build and maintain its tissues. Meat and milk soups contribute some of the needed protein. Meat, poultry, fish, eggs, milk, cheese, dried peas, beans and other legumes are the common foods in which protein is most abundant, though it also appears in fair amounts in the cereal foods, such as bread, breakfast foods, macaroni, rice and the like.

Since many of the protein-rich foods are among the most expensive of those in common use, it is especially important to make the fullest possible use of what is bought. Not all of the meat which we buy is suitable for use as such. The masses of fat which are trimmed off before cooking or are left on the platters may be saved, rendered and used in cooking, while the bones, gristle and other refuse parts find their best use in the soup pot where the long, slow cooking in water draws out the gelatin fat and other nutritive material they contain. This stock, as the resulting liquid is called, may serve as the basis not only of a great variety of soups, but also of gravies and sauces, and may be used for cooking vegetables, rice and similar foods. When it is used for soup, its flavor may be varied by adding various vegetables, such as carrots, onions, tomatoes, turnips and celery. It may be thickened with flour, bread crumbs or okra. Boiled rice, barley, macaroni and other pastes and croutons (small pieces of stale bread fried a delicate brown in deep fat) may be put in to increase the food value of soup and vary its appearance and taste.

Soup is not necessarily made from meat stock. Vegetable soups or purees are made by boiling potatoes, beans, peas or other vegetables until soft, mashing through a sieve and then heating with a little liquid (water, milk, soup stock or whatever seems desirable) and flavoring. Using left-over vegetables for such purees is an economical practice. Milk soups, which are really milk thickened and flavored with some vegetable, fish or other food to give flavor and perhaps thickened still more with a little flour or stale bread crumbs, are both nutritious and appetizing. They furnish also an excellent means of using up skim milk. Those who wish to bring down the cost of food should remember that skim milk, a cup of which contains as much protein as a cup of whole milk, is far too valuable a food to be overlooked.

In soup making it should not be forgotten that vegetables are necessary for keeping the body in health, because they are relatively rich in mineral matters and mild vegetable acid, and contain recently discovered substances without which the body processes seem not to be carried on properly. Since soups offer an excellent way of utilizing odds and ends of vegetables, and especially left-overs and parts which otherwise would be wasted, the use of vegetable soup is often a real economy. The fact that soups can be given so many and so varied flavors, are so easily made, so generally relished and make such palatable combinations with large quantities of bread and crackers, shows that they are very useful additions to the diet. Some recipes for soups, recommended by the government specialists, follow:

Scotch Broth.—Three pounds mutton, two tablespoons pearl barley, two tablespoons minced onion, two tablespoons minced turnip, two tablespoons minced carrot, two tablespoons minced celery, two tablespoons salt, one teaspoon pepper, one tablespoon minced parsley, three quarts cold water. Remove the bones and all the fat from the mutton, cut the meat into small pieces, and put it into a stewpan with the water, chopped vegetables, barley, and all the seasoning excepting the parsley. It will be found convenient to tie the bones in a piece of thin white cloth before adding them to the other ingredients. Bring the stew to a boil, quickly skim it and allow it to simmer for three hours, thicken with the flour, and add the chopped parsley.

Dried Fish Chowder.—One-half pound salt fish, four cups potatoes, cut in small pieces, two ounces salt pork, one small onion, chopped, four cups skim milk, four ounces crackers. Salt codfish, smoked halibut, or other dried fish may be used in this chowder. Pick over and shred the fish, holding it under lukewarm water. Let it soak while the other ingredients of the dish are being prepared. Cut the pork in small pieces and fry it with the onion until both are a delicate brown, add the potatoes, cover with water, and cook until the potatoes are soft. Add the milk and fish and reheat. Salt, if necessary. It is well to allow the crackers to soak in the milk while the potatoes are being cooked, then remove them, and finally add to the chowder just before serving.

Milk and Cheese Soup.—Three cups milk, or part milk and part stock, one and one-half tablespoons flour, one cup grated cheese, salt and paprika. Thicken the milk with the flour, cooking thoroughly. This is best done in a double boiler, with frequent stirrings. When ready to serve, add the cheese and the seasoning. The protein in this soup is equal in amount to that in five-sixths of a pound of beef of average composition; its fuel value is higher than that of a pound of beef.

Milk and Vegetable Soup.—One quart skim milk, one cup bread crumbs, or two large slices stale bread, small amount spinach or outer leaves lettuce (not more than four ounces), one small slice onion, salt. Cut the vegetables into small pieces and cook with the bread crumbs in the milk in a double boiler. If a large quantity is being prepared for use in a school, for example, put the vegetables through a meat chopper. In this case slices of bread can be ground with the vegetables, in order to absorb the juice.

Cowpea Soup.—One tablespoon butter or pork fat, one tablespoon finely chopped onion, one stalk celery, finely chopped, one cup dried cowpeas, salt. Soak the peas eight or ten hours in water enough to cover. Fry the vegetables in the fat, add the peas, in the water in which they were soaked, and cook (preferably in a double boiler) until the peas are tender. Put the mixture through a sieve and add water enough to bring it to the desired consistency. Reheat. If this soup is thickened with one tablespoon of flour mixed with a little water, the pea pulp will be prevented from sinking. Dried navy or lima beans, peas, soy (togo) beans, or other legumes may be used instead of the cowpeas.

Split Pea Soup.—One pint dried peas, four quarts water, one large onion, minced fine, four tablespoons sweet drippings or butter which gives a better flavor, three tablespoons flour, one tablespoon minced celery or a few dried celery leaves, one-half teaspoon pepper, two teaspoons salt. Wash the peas and soak them overnight in cold water. In the morning pour off the water and put them in the soup pot with three quarts of cold water. Place on the fire and when the water comes to the boiling point pour it off (throw this water away). Add four quarts of boiling water to the peas and place the soup pot where the contents will simmer for four hours. Add the celery the last hour of cooking. Cook the onion and drippings slowly in a stewpan for half an hour. Drain the water from the peas (save this water) and put them in the stewpan with the onions and drippings. Then add the flour and cook half an hour, stirring often. At the end of this time mash fine and gradually add the water in which the peas were boiled until the soup is like thick cream. Then rub through a sieve and return to the fire; add the salt and pepper and cook twenty minutes or more. Beans can be used in the same way as peas.

Mixed Vegetable Soup.—Three quarts water, one quart shredded cabbage, one-half pint minced carrot, one pint sliced potato, one-half pint minced turnip, one-half pint minced onion, one leek, two tomatoes, two tablespoons minced celery, two tablespoons butter or drippings, two tablespoons green pepper, three teaspoons salt, one-half teaspoon pepper. Have the water boiling hard in a stewpan and add all the vegetables except the potatoes and tomatoes. Boil rapidly for ten minutes, then draw back where it will boil gently for one hour. At the end of this time add the other ingredients and cook one hour longer. Have the cover partially off the stewpan during the entire cooking. This soup may be varied by using different kinds of vegetables.

Cabbage and Potato Soup.—One-half pint boiled cabbage, finely minced, three medium-sized potatoes, one and one-half tablespoons butter, drippings, or other fat, one teaspoon salt, one-fourth teaspoon pepper, one and one-half pints milk, whole or skim or milk and water, boiling hot. Peel the potatoes, cover with boiling water and cook until tender—usually thirty minutes; pour off the water and mash until fine and light. Add the cabbage, butter or other fat, and seasoning, then slowly add the hot milk or milk and water and boil up well. If a thinner soup is required the amount of milk or milk and water can be increased. If liked, an onion cut up fine and cooked in a little water may be added to the soup to give additional flavor, or grated cheese may be served with it. Kale, turnips, or a mixture of vegetables can be substituted for the cabbage, if desired, and this is a good way to use up left-over vegetables.

Onion Soup.—Two large onions or four medium ones, three level tablespoons fat, butter, or a mixture of the two, three pints boiling water, or water and skim milk (half and half), one and one-half teaspoon salt, one-fourth level teaspoon pepper, two tablespoons flour for thickening, if desired. Melt the fat and when hot put in the onions, which have been cut up fine; cook slowly until the onions are soft, then over a hotter

MUELLER PIPELESS FURNACE

YOU can heat your entire house next winter, from one register, without any pipes or flues—do away with the trouble and disadvantages of stoves. The Mueller Pipeless Furnace provides a continual circulation of moist, warm air through all the rooms, insuring perfect ventilation. The warm air rises, the cold air is drawn down to the furnace to be reheated. The Mueller Pipeless Furnace is a *real* furnace, backed by the Mueller name and reputation of 60 years as makers of heating systems of all kinds.

Exactly the same construction as the old reliable Mueller line, only without pipes or flues. Easy and inexpensive to install, even in small or partial cellars. Where there is no cellar, a pit is easily dug Does not heat the cellar, preventing storage of fruits and vegetables. Saves 35% in fuel—burns hard or soft coal, coke or wood.

Just tear out this advertisement, write your name and address on the margin and mail to us for interesting booklet telling all about pipeless heating, with name of nearest dealer who can tell you all about the Mueller Pipeless

L. J. MUELLER FURNACE COMPANY, 204 Reed Street, Milwaukee, Wis.
Makers of Heating Systems of All Kinds Since 1857

fire until the onions are brown—but not at all burned. Add the boiling water or water and milk, thicken with the flour stirred up in a little cold water, if it is desired to give the soup a little more "body;" boil up well and serve. It is a common custom to pour the soup over pieces of browned bread before serving. A mild cheese, grated, is a good addition to the soup, particularly if it is made with water.

Sign the Food Administration Pledge.

During the week of October 21st to 28th a house-to-house canvass is planned to obtain signatures to the pledge of the United States food administration. Women who have sons in the army, navy and marine corps have organized in every state in the Union to assist in this work and it is hoped that every loyal woman above the age of sixteen will pledge herself to do her bit in the conservation of food.

Speaking of this movement Food Administrator Hoover said:

It is peculiarly fitting that the mothers of the men who are to fight the national battles should enlist for this vitally essential service. They are sending their sons forth to endure the supreme test of citizenship. They want their sons to return to them as soon as the peace of victory may be achieved. They will hasten the coming of the peace by the work they have undertaken. In no war in which the nation has engaged have the loyalty, devotion and self-sacrifice of American women ever failed.

In no other war have they had a greater opportunity for service than is offered in the movement for conservation of the nation's food supplies. Not only does the food administrator cordially welcome the war mothers into the ranks of its volunteer workers, but an equal welcome will be extended to the wives and sisters of our soldiers and to all other loyal women who will enlist for a service which President Wilson has said is more essential than any other which American women can render. The liberty loan must be subscribed and will be subscribed, but it would be useless to gather this money to prosecute the war if we failed to make sure of the food which will win the war and the lack of which will surely lose the war.

As Mr. Hoover says, American women have never failed to show their patriotism in practical service and self-sacrifice, and they will not be found wanting in this instance. The signing of this pledge will show to the food administration that there are thousands upon thousands of loyal American housewives who are ready to wage war on waste and do their utmost to conserve the food supply of the nation.

Saving Mothers.

More women fifteen to forty-five years of age die from conditions connected with childbirth than from any disease except tuberculosis. About 15,000 deaths from maternal causes occur annually in the United States, and the available figures for this country show no decrease in the maternal death rate since 1900. Maternal deaths are largely preventable by proper care and skilled attendance.

These 15,000 deaths do not measure the full extent of the waste. They are merely a rough index of unmeasured preventable illness and suffering among mothers. Furthermore, certain diseases of early infancy are closely connected with the health of the baby's mother and the maternity care she has received, and these diseases cause about one-third of all the deaths occurring among babies under one year of age. More than 75,000 babies die each year from this group of diseases because they do not have a fair start in life.

The life and health of the mother are in every way important to the well-being of her children. Breast feeding through the greater part of the baby's first year is his chief protection from all diseases, and mothers are much more likely to be able to nurse their babies successfully if they receive proper care before, at, or after childbirth.

The expectant mother should at once consult a physician. She should remain under supervision so that any dangerous symptom may be discovered as soon as it appears. She should learn how to care of herself, and she should have proper food and rest and freedom from anxiety. When the baby is born the mother needs trained attendance. A difficult maternity case is one of the gravest surgical emergencies. Many people do not seem to understand that in any case complications may arise which can be met safely by prompt and skillful scientific care, but which at the hands of an unskilled attendant may cost the life of mother or child or both. Even after confinement the mother needs continued supervision and rest until her strength has returned.

Thousands of mothers, both in city and country, do not have the essentials of safety, partly, perhaps chiefly, because they do not realize the dangers involved in lack of care or else accept the dangers as unavoidable. Many women are at present unable to obtain proper care, but when all women and their husbands understand its importance and demand it for every mother, physicians will furnish it, medical colleges will provide better obstetrical training for physicians, and communities will see to it that mothers are properly protected.

Little has been done as yet to show women that much of the waste of mothers' lives and health is unnecessary. Even less has been undertaken by communities to provide protection for them. Many communities which have studied their typhoid and tuberculosis death rates and have undertaken costly measures to reduce them have been heedless of the death rates among mothers. It is not strange, therefore, that since 1900 the typhoid rate for the country as a whole has been cut in half and the rate from tuberculosis has been markedly reduced, while the death rate from maternal causes has shown no demonstrable decrease.

Just how the importance of adequate maternity care is to be made plain to a community, and just how skilled care and instruction are to be made available for all mothers, are, of course, local questions to be considered by each community.

Difficulties are perhaps greatest in rural districts where the sheer inaccessibility of a physician is often added to the other elements of the problem. Here a public service with headquarters at the county seat, or other accessible town, would probably be the first step, placing at the service of every expectant mother a visiting nurse who is especially equipped to give her information about personal care and to watch for symptoms of trouble demanding medical advice. As such a nursing service develops, its headquarters might become, with the coöperation of physicians, a sort of maternal and child-welfare center to which not only expectant mothers but also mothers with babies could come for instruction, examination and advice. If no general hospital were conveniently near, a cottage hospital for mothers and babies might ultimately form a part of such a center.

A more general use of existing provisions for scientific maternity care and the extension of provisions for such care in all types of communities should serve to reduce the number of deaths among mothers and babies and to improve the health and general condition of children throughout the country.—[Children's Bureau.

An Orderly Desk Makes Correspondence Easy.

Why are social notes neglected? Why are family letters written with less and less frequency in many homes, till the old ties are almost broken? Why are business obligations overlooked and bills and receipts lost? Why are friendly letters a burden and old and valued friendships allowed to decline?

In many homes, these are the results of mere neglect in keeping at hand the materials for correspondence. If a frantic hunt through a badly disordered desk reveals only a few half sheets of paper and no envelopes, the impulse to write the letter that was just in the mind is checked. If, after being written, the letter has to wait several days for a stamp; if the envelopes do not fit the paper, or the ink is thick, or the bottle empty—and yet it is upon such trifles that friendship or family solidarity may depend.

The efficient desk does not require mahogany for its structure. It may be a drawer in a pine table, but it must contain an adequate supply of such essential materials as note and letter paper, envelopes to fit each, a supply of stamps, correspondence cards, ink, pencils, eraser, memorandum pad, rubber bands, with perhaps a tube of library paste, and some paper clips. If in addition there is a postal scale, a file for bills and a pocket or pigeonhole for unanswered letters a few minutes of spare time may be spent in getting a letter ready for the postoffice, rather than in a loss of nerve energy in a fruitless search for materials and conveniences. These are mere trifles, but home letters and the joys of friendship and business promptness and accuracy are no trifles.—[Virginia H. Corbett.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

A Bad Accident.

Dear Young Folks:—This is my first letter and I am going to tell you about a bad accident I had early last spring.

One day our teacher asked us how we would like it if she asked our director if we could have a day off to have a school picnic among ourselves down in the timber about two miles away from our school ground. We all agreed we would like to have it, so on Wednesday we went to the timber. We roasted marshmallows on large sticks over a bonfire and divided our dinners among us. After dinner we picked flowers and had a good time except that all were frightened about me.

This is how it happened. When we were roasting marshmallows one of children must have got a burning marshmallow against my dress when they pulled it from the fire. It set fire to my dress and burned it. One of the girls saw it and called, "Fire! Fire! Emma is afire!" When I heard that I was so frightened I didn't know what to do because it was on my back and I didn't know how to get it out. But my teacher and one of the girls fought it with their hands. I had an apron along and put it on over the dress. I was very much scared all that afternoon and did not enjoy it much. But it taught me never to roast marshmallows like that again.

Emma.

Is Going to Be a Teacher.

Dear Young Folks:—This is the first letter I have ever written you. I have been reading the letters for a long time and I like them fine. Sometimes there are not enough letters. Some of the letters are very interesting. I liked Hetty's letter and Vivian's.

I am a girl fourteen years old and I am four feet eleven inches tall. I have light hair and dark blue eyes. I am in the eighth grade at school. I expect to finish this year, and when I have finished the grades I am going to high school. I want to be a teacher.

My dog's name is Rover. He is yellow with a white stripe running down his face. He goes with me for the cows every morning and evening. I also have a pony named Maud. She has a white face and her hind legs are white. I take her to town sometimes and I ride her when I go for the cows.

I have two brothers, one eight and one six years old.

Clara.

Country Life for Her.

Dear Young Folks:—Well, I believe you will let this pussy have a corner on the children's page. I have never written to you before. I always read the children's page and I think it is very interesting. I am a girl thirteen years old and am in the eighth grade. I like my teacher fine.

I live on a farm of 640 acres. We have pigs, horses, cows, cats, dogs and chickens. I have a pet cat and dog. I would not give up country life for city life. We live about four miles from town. We have a car. We have to go a half mile for our mail and I ride a horse when I go.

I think the answer to Blanche's riddle, "What has a head but no tail?" is a nail.

Faithe.

Belongs to Pig Club.

Dear Young Folks:—I enjoy reading your letters, so I am going to write to you. I am twelve years old and in the sixth grade. I started to school when I was eight years old and I missed one year after I started. I joined the pig club this year. I have three brothers and two sisters. We have to walk three-quarters of a mile to school.

We live in the country and I enjoy country life. I have four pets, a dog and three cats. My largest cat's name is Polly and I love her. She has two kittens. The kittens' names are Floss and Jerry.

We have a man teacher at our school this year. He is very nice. I want to learn to cook. I wish someone would tell me how to make a chocolate cake. We have domestic science in our school this year.

Beulah.

Old October.

Old October's purt nigh gone,
And the frosts is comin' on
Little heavier every day,—
Like our hearts was that away!
Leaves is changing overhead,
Back from green to gray and red,
Brown and yeller, with their stems
Loosenin' on the oaks and e'ms'
And the balance of the trees
Gittin' balder in the breeze—
Like the heads we're scratchin' on!
Old October's purt nigh gone.

I love old October so,
I can't bear to see her go—
Seems to me like losin' some
Old home relative or chum—
'Pears like sorto' settin' by
Some old friend 'at sigh by sigh
Was apassin' out o' sight
Into everlastin' night!
Hickernuts a feller hears
Rattlin' down is more like tears
Drappin' on the leaves below—
I love old October so.

Can't tell what it is about,
Old October knocks me out!—
I sleep well enough at night—
And the blamedest appetite
Ever mortal man possessed—
Last thing et, it tastes the best!—
Warnuts, butternuts, pawpaws,
'Tlas and limbers up my jaws
Fer raal service, sich as new
Pork—spare-ribs and sausage, too—
Yit, fer all they's sompin' 'bout
Old October knocks me out.

—James Whitcomb Riley

There is a disposition on the part of some wheat growers to hold their wheat with the idea in mind that sooner or later the government will increase prices. Those who are pursuing this plan are unquestionably making a mistake, as the food administration was convinced before prices were fixed that they were high enough to stimulate production and to give the wheat farmer a satisfactory profit.

Tractor manufacturers report more orders in some regions than they are able to fill immediately. Farmers who have had one tractor are buying another. Such evidence indicates that the tractor is here to stay.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Enclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date fall and winter 1917-1918 catalog, containing 550 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating thirty of the various simple stitches), all valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

2233—A popular boys' suit. The pattern is cut in 4 sizes: 3, 4, 5 and 6 years. Size 4 requires 2¾ yards of 36-inch material.

2247—Ladies' one-piece dress. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 5¾ yards of 44-inch material.

Waist 2239-Skirt 2235—A popular model. The waist pattern 2239 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt pattern 2235 in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. Size 36 bust measure will require 7⅛ yards of 44-inch material. Two separate patterns, 10 cents for each pattern.

1918—Chlidren's rompers with round collar or square neck outline, and with long or short sleeve. The pattern is cut in 3 sizes: 2, 4 and 6 years. It requires 3 yards of 36-inch material for a 4-year size.

1829—A smart frock for mother's girl. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 3¾ yards of 36-inch material for an 8-year size.

2232—A simple one-piece dress, with sleeve in either of two lengths. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 requires 5 yards of 44-inch material.

1909—A new coat dress for misses and small women. The pattern is cut in 4 sizes: 14, 16, 18 and 20 years. Size 16 requires 6 yards of 44-inch material.

2240—A simple dress for school or general wear. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. Size 6 requires 2⅜ yards of 44-inch material.

1848—Girls' coat, with raglan sleeve. The pattern is cut in 7 sizes: 2, 4, 6, 8, 10, 12 and 14 years. It requires 2⅜ yards of 44-inch material for a 6-year size.

2083—A practical undergarment. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3½ yards of 36-inch material for a 36-inch size.

2227—Ladies' dress, with sleeve in wrist or elbow length. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 5⅝ yards of 36-inch material.

1990—Ladies' apron and sleeve protector. The pattern is cut in 4 sizes: 34, 38, 42 and 46 inches bust measure. Size 38 requires 5 yards of 36-inch material for the apron, and ⅜ yard for the sleeve protector.

International Sunday School Lesson

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for October 21, 1917.

The Temple Rebuilt and Dedicated.

LESSON TEXT—Ezra 3:8-13; 6:14-18.

GOLDEN TEXT—Enter into his gates with thanksgiving, and into his courts with praise.—Psalms 100:4.

The remnant which returned had now become settled in their new homes. As it would be a considerable time before the temple could be rebuilt, arrangement was made for the religious life as early as possible, as religion was the very heart of the nation's life. They first set up the altar of the God of Israel (3:1-3) and offered burnt offerings thereon. They next revived the annual festivals (3:4-7) which had a powerful, unifying influence upon them.

I. The Appointment of Officers to Set Forward the Work of the Lord's House (v. 8, 9). Overseers were needed to direct this great work. Rubbish needed to be cleared away so the building operations could begin; timber needed to be cut in the Lebanon forests and floated down to Joppa; stones needed to be cut from the quarries; intelligent and consecrated men were needed to direct this work, as it was needful that it be done with the utmost expedition. The Lord's house demands the most systematic adjustment of its labors. Mere zeal will not make up for lack of intelligence.

II. The Foundation of the Temple Laid (3:10-13). This was done amid great rejoicing. The consciousness that the Lord's house was taking shape, even though the mere foundations could be seen, provoked great enthusiasm on the part of the people. Musicians were appointed to furnish music while the work was being done. Under the influence of music men will do better work, armies will march and fight better when bands are playing. While there was great joy, there was also mingled sorrow. This was on the part of the elders who had seen the former temple. The meanness of the present temple in comparison with Solomon's temple caused their praise to be drowned with their sorrow. These people belonged to that class who think nothing now is so good as in the former day. So completely were these voices commingled that the people could not discern the one from the other.

III The Building of the Temple Delayed by Opposition. (Chapters 4 and 5.) For a time matters went smoothly with them, but as soon as the work had taken such shape as to show that there was some prospect of success, the half-heathen Samaritans began to oppose them. No vital work of God will be allowed to go on without opposition. Satan resents and bitterly opposes all inroads upon the kingdom. These Samaritans sought to frustrate this work of God by:

(1) An Alliance With the Jews (4:2, 3). They wanted to bring the work in harmony with their own religious practices, as God's pure worship would be a constant rebuke to them. This is ever the way of the world, to seek to effect a compromise with God's children; but God's call is separation. "Come out from among them" (2 Cor. 6:14-18). Nothing so weakens God's cause as worldly alliance and compromise. There is but one answer to be given to such an offer of compromise. "Ye have nothing to do with us in building a house unto our God." We are in the world, but not of the world.

(2) Weakening the Hands of the People (4:4). Doubtless this included the withdrawal of supplies, the spreading of dissension among the workmen, and the employment of counselors against them.

(3) Letters of Accusation to the Persian King (4:6, 7). So severe was this opposition that the building was delayed for a term of years. These counselors succeeded in creating doubt as to whether Cyrus had ever issued a decree for their return. This wicked opposition resulted in the undoing of the opposers, for search was made and a copy was found. Darius confirmed this by his own decree, and directed that aid be given from the royal taxes so that the house of God might be built.

IV. The Temple Completed and Dedicated (6:14-18). The Prophets Haggai and Zachariah now appear, and by warnings, exhortations and entreaties stir up the people so that the work goes forward to a successful completion. Without their aid probably the work would never have been completed. Human nature at times needs to be cheered and urged forward. These prophets did not themselves work in the building of the walls, yet their work was of even greater importance.

It is generally found that this is so with the religious leaders today. The words of cheer and encouragement of the Christian minister are needed daily for those who labor in the building of the Lord's house. Were it not for them many would give up the struggle. When the building was finished it was dedicated to God with great joy. This was possible because they had builded and finished their task according to the commandment of the God of Israel. The service of dedication was much after the order of that of Solomon's temple, only on a less magnificent scale.

Bovee's Pipeless Furnaces

Sold at Manufacturer's Prices

The most practical heating plant used. Twenty years on the market. Saves 40 per cent on cost and 40 per cent on fuel. We manufacture five sizes suitable to heat from a small cottage to a large church, including our old reliable No. 40 Pipeless with 28-inch combustion chamber and all fittings, for

$86.00

Easy to install in an old or a new house. No cutting of walls. Cool basement. We also furnish regular piped furnaces and fittings when required. Save big money by getting our free catalog.

FARMERS' MARKET

WANTED — FOR SALE — TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may have live stock, poultry and eggs or machinery for sale. You may want to sell or buy a farm. Write your copy for the advertisement. The rate is six cents per word, each insertion.

The Wisconsin Farmer, Madison, Wis.

FARM LANDS.

FOR SALE—240-acre cattle ranch, twenty miles from California line. One of the most beautiful valleys of southern Oregon. Ideal location. No long, bitter, cold winters or intensely hot summers. Price $5,000. An exceptional opportunity for a cattle man. Address Owner, H. M. Henderson, 85 Main St., Oshkosh, Wis.

FOR SALE—4,000 acres cutover land just north of Two Harbors, Minn.; good agricultural land; 2 railroads and automobile road through it. $6 per acre; adjoining land retailing at $15 per acre. Description furnished to parties who mean business. L. W. Tulleys, Council Bluffs, Iowa.

BLUE GRASS PASTURE FARM—260 acres, southwestern Wisconsin. Will pasture 100 head cattle, plenty water, half tillable, balance timber. 5 miles from station. Real snap. Price $50 per acre. Cash $3,000, balance terms. E. C. Amann, Prairie du Chien, Wis.

VIRGINIA FARMS—Fifty-page catalog free, describing alfalfa, blue grass, stock, dairy and poultry farms. Good lands and prices right. Write today for catalog. Business established 1899. Allison Land Agency, Fredericksburg, Va.

ARE you an experienced stockman? If so, and you have $5,000 to invest, I have a proposition for you as department farm manager at salary, dividends and interest. State experience. Box 467, Conrad, Montana.

WANTED—Offers on my timber lands in Carroll county, Arkansas. I have about 5,000 acres. Can be had in quantities to suit purchaser. Apply at once. D. T. Parsons, Eureka Springs, Ark.

WOULD YOU SELL YOUR FARM if you got your price? Sell direct. No commissions. Particulars free. Charles Renich, G-2, Woodstock, Illinois.

FOR SALE—110-acre agricultural stock farm, near St. Paul, into Wisconsin. Particulars. Write owner, Box 231, Botineau, N. D.

FLORIDA FARM lands, two to three crops; flowing wells. Write for particulars. T. B. Stinson, Palatka, Fla.

WANT TO RENT a farm, 40 to 80 acres, around Milwaukee, Wis. Jindirich Miller, Goodrich, Wis.

KODAK FINISHING.

KODAK FINISHING—Let experts finish what your kodak began. We finish one roll (only) six exposure film, any size, furnish six select prints for 25c with order. Better pictures from each exposure. Fewer failures from each roll or money cheerfully refunded. T. V. Moreau Co., 620 Nicollet Ave., Minneapolis, Minn.

MONEY TO LOAN.

MONEY TO LOAN on Wisconsin farms in amounts of $5,000 to $25,000. Security must be twice the amount of the mortgage. 6% with privilege of paying $100 or more at any time. Address 206 Washington Bldg., Madison, Wisconsin.

HOLSTEIN BULLS.

REGISTERED Holstein bull, ready for service. Two of his dams averaged 108 lbs. milk in one day and 34.95 lbs. butter in seven days, officially. Price $125. Wisconsin Live Stock Association, Appleton, Wis.

BULL TRACTORS.

FOR SALE—Two bull tractors, one 10-20, 2-bottom Case plow, $750; one 12-24 with 3-bottom Vulcan plow, $975. Both in good condition. A. H. Kruse, 465 Forest Ave., Fond du Lac, Wis.

LEARN TELEGRAPHY.

TELEGRAPH OPERATORS IN DEMAND—One superintendent writes: "Can use 25 operators tomorrow." Ladies or gentlemen. Wisconsin School of Telegraphy, Oshkosh, Wis.

LEARN TELEGRAPHY—Positions guaranteed. Young men and women. Write Northwestern Telegraph School, Eau Claire, Wisconsin.

BREEDING EWES.

BREEDING EWES FOR SALE—Now is the time to buy before they go higher. Wool and sheep are going to be higher in price and stay high. John Blanchard, Columbus, Wisconsin.

GUERNSEY BULLS.

FOR SALE—Registered Guernsey bull, Gipsy Captain, from Tristan of Saradale (18470) and Imp. Gipsy Girl of the Isle (28573). Five years old. Chas. Fagerness, Whitehall, Wis.

VISITING CARDS.

SOMETHING CLASSIC—50 visiting cards, your name and address printed in gold bronze, 25c postpaid. Makes an ideal Christmas present. R. Wiese, Atlantic, Iowa.

LIGHTNING RODS.

LIGHTNING RODS that are guaranteed protection, $250.00 to find a building burned by lightning with our rods. L. F. Diddie Co., Marshfield, Wis.

RINGLET BARRED ROCKS.

DOOTOR'S big, beautiful "Ringlet" Barred Rock cockerels, on approval, $3 to $5 each. Winners. Heavy-laying strain. Dr. E. C. Higgins, Melrose, Wis.

EMERSON SULKY PLOWS.

FOR SALE—Emerson sulky plow having extra breaker bottom, completely equipped. H. A. Brager, Mount Horeb, Wis.

HOLSTEIN COW.

FOR SALE—Four young registered Holstein cows. Fine individuals. Due soon. Fred I. Cox & Sons, Omro, Wis.

JERSEY CALVES.

FARMERS' PRICES—Before Nov. 1st, Jersey bull calves, best breeding. D. W. Howie, Jr., Elm Grove, Wis.

SHETLAND PONIES.

FOR SALE—Blue ribbon Shetland ponies, $40 up. Howard Dwan, Browntown, Wis.

Veal and Heifer Calf Situation.

Opinion of Prominent Men Gathered by George C. Humphrey, Animal Husbandry Department, College of Agriculture.

STATEMENTS concerning the number of veal and heifer calves sent to market from Wisconsin farms are at variance. This is due to the difficulty of getting a complete census of all calves born, shipped and slaughtered at all points in the state. The short lifetime of veal calves would necessitate taking a census at frequent intervals if anything like an accurate number of calves produced annually or a true situation concerning the shipment and slaughter of calves in Wisconsin were to be secured. The following statements, however, concerning the slaughter of heifer calves are of interest:

In the spring of 1917, at Chicago, Illinois, to which point many Wisconsin calves are shipped, Mr. A. G. Leonard, president of the Union Stockyards & Transit Co., had a count made of calves received and in 5,000 calves arriving on the market, there were only thirty-one heifers. In another instance a count was made of 500 calves unloaded at Swift & Co.'s dock and not a heifer was found.

At the Milwaukee Stockyards a record of the receipt of calves was made for March and April, 1916 and 1917, and was as follows:

	March	April
1916	19,622 head	20,971 head
1917	22,546 head	26,364 head
Increase	3,280 head	5,393 head

Mr. R. H. Shields, manager of the Milwaukee Stockyards Co., states that in his opinion, based on actual observations, the receipts of calves from Wisconsin run 85 to 90 per cent male calves. He further states in a letter dated April 30, 1917, to R. Baker, assistant secretary of the Wisconsin Live Stock Breeders' Association, that there are several buyers on their market who purchase well-marked, well-formed and thoroughly sound heifer calves and ship them back to the country to be raised for dairy cows. A record of the purchase of such heifer calves for March and April, 1916 and 1917, is as follows:

	March	April
1916	146 head	271 head
1917	647 head	869 head
Increase	501 head	598 head

Mr. Shields further states that an interview with a number of parties who ship stock regularly to Milwaukee, indicates that the farmers are holding back a greater number of heifer calves than heretofore and also that where the shippers purchase heifer calves in the country they, in a great many instances, find an immediate sale for them without shipping.

Arthur Broughton, president of the Wisconsin Live Stock Breeders' Association, states that during the spring of 1917 on live stock shipping days at Brodhead and New Glarus, the farmers of Rock county purchased a large number of good grade dairy heifer calves with the object of raising them for dairy cows.

Mr. John LeFeber, Milwaukee, a member of the Dairy Industry War Council, states that he never could agree with those claiming that milk cows were going to the slaughterhouses at an alarming rate. He further states that he had a long talk with Mr. George Van Norman, a stockyard commission man, who says that he believes there are no more milk cows coming to the yards at the present time than there have been for the past three or four years. He believes that the present high prices for milk is incentive enough for every producer to keep every good cow milking under the most favorable conditions.

Our D. S. Bullock spent several days gathering information concerning the dairy cattle situation in the vicinity of Blanchardville, Wisconsin, and reports that farmers were raising as large a number of heifer calves as their feed conditions and facilities for housing them would permit. This condition has been observed by all of the members of the animal husbandry staff in many communities in Wisconsin.

Mr. N. A. Negley, engaged in organizing and supervising cow-testing associations in Wisconsin, recently called for a report from the eighty-three associations in the state on dairy farm conditions. He submits a partial report as follows:

A summary of the report from forty-seven cow testers who visit monthly 1,410 dairymen having 23,500 cows on test, shows the following:

In reply to the question: "Are there more heifer calves being sold for veal than formerly?" all of the testers reported "No."

In reply to the question: "Are there any good heifer calves from pure-bred bulls being sold for veal?" thirty-nine reported "No," four reported "Yes" and four reported "Few."

In reply to the questions: "Are any of your members going out of the dairy business because of feed prices and labor shortage? How many? forty-one reported "No," the balance reporting that six members had gone out of business and two were cutting size of herd.

Mr. Reid Murray, assistant state leader in agricultural extension service, spent a day at the Chicago Union Stockyards and one day at the Milwaukee Stockyards in August, 1917, and studied the calf situation. He reported that on the average he found one-fourth to one-third of the calves to be heifers. A considerable number of heifer calves were being picked up and sent back to the country. Dealers reported that they would secure heifer calves for anyone wanting them at $1 per hundred above veal prices.

At. Mt. Horeb, Wisconsin, in August, Mr. Martin, a live stock shipper, accounted for several well-marked Holstein heifer calves which were being sacrificed for veal, by saying that most dairymen had saved earlier in the season all the heifer calves they were in a position to raise and that, moreover, August calves were the most unsatisfactory to raise.

For the past three years the watchword in Wisconsin among institute and all extension workers has been, "Raise Better Dairy Calves." Farmers have been advised that it does not pay to raise poorly bred and poorly developed calves. The good prices that have been paid for high-grade and pure-bred dairy cattle ranging in age from young heifer calves to mature cows, have encouraged Wisconsin farmers to heed the above watchword.

County agricultural representatives, emergency food agents, community breeders' associations, the Wisconsin Live Stock Breeders' Association and the college of agriculture have been active in helping buyers from communities within the state and from other states, in locating cattle they desired to purchase. Approximately 28,000 head of cattle for dairy purposes were shipped from Wisconsin to other states in 1916.

In conclusion it may be said that the situation with reference to the attempt on the part of farmers of Wisconsin to raise a large number of heifer calves is more encouraging than ever before. If communities within the state or in other states will make their wants specifically known, it is believed that there will be very little difficulty in helping them to get into touch with any dairy heifer calves that are being put on the market because of surplus that dairymen may have and which it is impracticable for them to keep and raise.

International Entries Close Soon.

No Entries Allowed After November 1st.

A most satisfactory state fair season has been brought to a close and the next important item on the program is the International Live Stock Exposition which will be held in Chicago, December 1st to 8th. This exposition has been growing in importance and it has been proven over and over again that a ribbon captured there is of great value to any exhibitor. We believe that it is especially important that the number of entries be large this year. Meat products have never been so high nor has the interest in pure-bred stock been as keen as it is at the present. Certainly the International has effected improvement in the common stock of the country and at this time we call the special attention of our readers to the fact that the entries for the 1917 show must all be in by November 1st.

Those who desire to obtain copies of the preliminary classification or to obtain any information whatsoever regarding the International should write at once to the general superintendent, B. H. Heide, Union Stockyards, Chicago.

You Can Do as Well as This Man

This is H. A. Neumann the Lange man for Dodge Co., Wis. His sales for one month were $931.50, average per week $192.68. He is 27 years old; started two years ago, both he and his goods strangers in the territory, and has built up this splendid business of his own, selling Lange's Extracts, Spices, Teas, Coffees, Household Specialties and Veterinary Remedies direct from wagon to home. You can do as well. Let us give you actual figures of their sales. We will instruct you on every point, teach you how to sell and give you exclusive territory near your home. Our contract beats all others. If you're not making $200 a month, write us at once about our plan. We want men right now for Walworth, Columbia, St. Croix, Lafayette, Portage and Richland Counties, in Wisconsin.

The Lange Co., Dept. E. DePere, Wis.

The DAISY SPARK PLUG

The AUTO TROUBLE ELIMINATOR

Surpasses Anything Out

Spark Plug trouble is caused by the accumulation of carbon on the porcelain. The drawing, with opening showing ring on lower end of porcelain which is tossed up and down at every explosion, prevents carbon accumulation and missing.

Owner, name and breed.	Age.	When fresh.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
N. A. Rasmussen					
May Bee, G. G.	5	6-3-17	840	5.6	47.0
H. R. Mosely					
Rosy, G. G.	7	2-6-17	720	6.3	45.9
Delma, P. B. G.	7	8-8-16	1110	4.8	53.2

ARTHUR BARTHELS, Official Tester.
L. E. BRUNSON, Secretary.

High Prices Paid for Furs.

FARM boys can make money trapping and selling furs this winter. The demand will be strong for practically all kinds of pelts. It is essential, however, to get good traps and other equipment and to have a good market. Mason Fur Co., Inc., 114 Trappers Headquarters, St. Louis, Mo., is a good firm to deal with in this line. They pay high prices for skunk, coon, fox, mink, muskrat and other furs and hides and they furnish trappers' supplies to their customers at factory prices. This company will send free a price list of furs and hides, shipping tags and complete catalog of equipment to every farm boy or man who expects to do trapping this winter. Write for them at once, using the address given above. The advertisement appears on page 13.—Adv.

Have You Sawed Your Wood?

IF you have not sawed your wood, now is the time to do it. There is no way that a man can put up his wood as easily and cheaply as he can with a folding sawing machine. This machine has been on the market for a great many years. The machine is giving universal satisfaction wherever it is used. Taking into consideration the saving by the use of this machine it is one of the most economocal machines sold. Write to the Folding Sawing Machine Company, 161 W. Harrison St., Chicago, Ill., and ask them for a catalog which shows illustrations of the machine and gives many testimonials, from every state in the Union. See advertisement on page 16.—Adv.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Waukesha County Guernsey Breeders' Association.

THE eleventh annual sale of pure-bred Guernseys at Waukesha, Wis., will be held October 31 and November 1st. Seventy-five head of pure-bred females will be offered October 31st. These animals have been selected with the aim of making this sale a record breaker and to do this only animals of special merit both as to breeding and individuality have been accepted. Among the splendid offering will be found the following consignors: Charles L. Hill, who is offering 75 head of cows and heifers. There are cows among this number with records as high as 615 pounds fat. John L. Williams, who is offering six females of splendid May Rose breeding; George McKerrow & Sons Company, who are consigning eight females, daughters of Governor of the Chene, Governor of Myrtle Place 2d, being included; William M. Jones, six females, including A. R. cows with records up to 696 pounds fat; George W. Browne, 11 females in addition to a young bull, whose dam has a record of 717 pounds fat; Fruit Brothers, with an A. R. cow having a record of 649 pounds fat sired by Glenwood's Stranford; George Lawson with a son of Rhea's King of the May, out of a dam having 568 pounds of fat; Goodhand Kingston, two females, one with a record of 411 pounds of fat at two years; George Konrad with two females, including a granddaughter of The Conqueror 2d. Other consignors are as follows: H. Reidburg, L. J. Wendt, Crouch Bros., C. M. Harvey, F. E. Humriow, J. R. Love, C. J. Mitchael, Basse Bros., Earl Roberts, William Fisher, Connell Bros., F. C. Smith and Freehoff Bros. On November 1st 50 head of very high-grade cows and bred heifers will be sold. The grades offered are all very high class, well marked, good producers and should be valuable additions to any herd. Pave the way for a good foundation herd. They have all been carefully inspected and will be tubercular tested. One of the special features of the sale will be Red Cross Lady, a pure-bred Guernsey heifer, a double granddaughter of Governor of the Chene, that will be sold October 31st. The money received will be given to the Red Cross Society. She was donated to the Waukesha Association by one of its generous members, George W. Browne, Waukesha, Wis. Show your particulars write to F. E. Fox, secretary. See advertisement on page 28. —Adv.

Prairie View Stock Farm, Burlington, Wis.

W. G. BARTHOLF, proprietor, writes us that owing to the fact that he is unable to use Wisconsin Pathfinder, which is by Mighty Pathfinder, their junior yearling boar, to good advantage any longer, they are offering him for sale at a bargain. Mr. Bartholf also states that they have a good spring boar by King Orion and out of a Lee's Defender dam, that is surely a good one. It will be remembered that Mr. Bartholf's herd made a very creditable appearance at the Wisconsin State Fair this fall, as well as at the Elkhorn and Beloit county fairs. They are offering the first-prize boar pig at the Elkhorn and Beloit county fairs that won out over the first-prize boar pig at the Wisconsin Fair. This choice young boar is priced at $75 and is by Outlook Cherry King. They are also offering ten choice March pigs by Outlook Cherry King and Wisconsin Pathfinder. Farmers looking to get started right in Durocs should write to Mr. Bartholf with reference to these animals, as we were very well impressed with Mr. Bartholf's herd the last time we visited him. See advertisement on page 26.—Adv.

Pellett Has Good Chesters.

WE have just been advised that the Pellett Chesters were winners at the Inter-County Fair at Viola. Their good boar, Schoolmaster 38th, won in his class. They also won first on sow under two years, first on sow and litter and first on sow under six months. This Schoolmaster 38th is a good boar. He is a son of the well-known Schoolmaster, and he is breeding fine in the Pellett herd. The winners were sired by this boar. They offer for sale pigs sired by W. A.'s Wonder, grand champion of Iowa in 1915, and these are out of Sunny Side Ideal 101026. This is good breeding and many of the Chester men of Wisconsin could use a gilt or two from this litter to good advantage. The Pelletts register all stock they sell and guarantee satisfaction in every respect. We believe that if you place an order with them you will find the pig just as represented. Write them for further information, and in so doing kindly mention The Wisconsin Farmer. See advertisement on page 27.—Adv.

Inter-County Holstein Sale, Watertown, Wis., November 8th and 9th.

MR. FRANCIS DARCEY, secretary, has been successful in listing an exceptionally large number of high-class cattle to be sold at this sale. There are several better than 30-pound bulls to be consigned, 27 and 28-pound bulls and a large number of high-class females with very creditable A. R. O. records, as well as A. R. O. backing. For details concerning this sale we suggest that you write Mr. Francis Darcey, Watertown, Wis.—Adv.

Have You Noticed the Chester White Advertisements?

THE Chester Whites have gained immensely in the last few years. This condition is true in Wisconsin, as well as other states and if you will look at the live stock columns of The Wisconsin Farmer, you will see more advertisements of this breed than has ever appeared before in a Wisconsin publication—there is a reason—the breeders have the goods and they want to get their products out where they will advertise this good breed. The best herds of Chester Whites in the state are advertised in this publication; for instance, Babcock, of Evansville. He is a young breeder that had those good and big spring pigs at the fair at Milwaukee. He has the same kind at home for sale. Butts, of Evansville, is the owner of Pay Streak, the boar that was grand champion of Wisconsin—his get would be good property. Then there is Walter George, of Evansville, who has some of the best pigs we have seen this year. Art G. Hoskins, of Dodgeville, can sell you a boar that weighs over 200 pounds that will make your eyes water. Spring Green is where Carl Hickcox "hangs out" and while he don't ask as much money as some, he gives you value received. Hoover Select and Ideal Combination are the big noise at Bloom City, an inland town near Viola. L. J. McBain owns these two good boars and if you could see them you would want a boar sired by one of them. The fact that J. A. Doerr, of Viroqua, has been breeding Chesters for a quarter of a century should be recommendation enough for his product. John Pellet attended some of the high average sales last winter and bought some good sows. They raised good litters and if you want some new blood write him at Viola. John P. Vogt, Jr., is in Grant county and is one of the younger breeders. He expects his pigs to do most of his advertising and is located at Glen Haven. Adolph Nuttleman, West Salem, is one of our oldest advertisers and has one of the best mail order trades of any man in the state. The reason—his pigs satisfy. A. L. Gray, of Mt. Hope, also Grant county, is one of the old-timers and enjoys a flourishing business. He has a well-bred herd of Chesters. Chas. Rogers & Sons, of West Union, are better known as Short-horn men than they are for Chesters, but the latter will please you. Last, but not least, is J. Fisher & Son, Box 13, Eastman. Mr. Fisher has sold more Chesters than any man in the state and makes a specialty of selling his pigs at weaning time. Any of the above breeders will give you a square deal. See advertisements on page 27.—Adv.

Be at Ridgeway, October 24th.

ON the above date R. F. Brunker & Sons will sell about 40 Poland China boars at their farm, five miles south of Ridgeway, Iowa county, Wis. They are selling some big, useful, well-bred boars in this sale—yearlings and boars of spring farrow. Breeding boars are not plentiful this fall. The farmers are just beginning to buy and before the middle of December many are going to be unable to get the kind of boar that they should use. This condition was true last year. As a rule the farmer does not buy his boar until he is ready to use him and then all want boars at the same time. Get your boar early and don't take what's left. You will have better success too, if you buy your boar now and take him home so that he will get accustomed to his new surroundings before you start to use him. Brunker is selling boars that you can use and it will pay you to attend this sale. If you can't get away on October 24th, T. P. Shreve, who represents The Wisconsin Farmer at this sale, will gladly select something for you if you will advise him what you want and about what you want to pay. Send mail in care of R. F. Brunker.—Adv.

Boars All Sold.

WE have just been advised by Mike Stoehr, Viroqua, Wis., that he is sold out of Duroc boars of spring farrow. This is the man that owns Orion King, the best son of the grand champion, King Orion, and Mr. Stoehr will sell you a gilt now and keep her and breed her to his good boar. This is a good deal for the buyer and if you write now you will get the choice of his spring gilts. Stoehr has a good lot of sows, some of The Professor breeding and he has some good gilts out of these sows. Write him and please mention this publication.—Adv.

Cain's Giant Invincible Sale.

YOU have no doubt heard about J. J. Cain, the Duroc breeder, of Skyberg, Minn. He came "out of the brush" last year and "cleaned the slate" with his futurity pigs at the Minnesota State Fair last year. He went to Omaha last October and purchased a boar pig, namely Giant Invincible. This was the best yearling boar that we have seen this year. Mr. Cain thought him good enough to take to the Iowa State Fair. Upon his arrival he caused a sensation in Duroc circles. Several men tried to buy this boar, but Jake Waltemeyer was the only one that thought enough of Giant Invincible to give a check for $2,500. The fact that this veteran breeder and showman purchased this great boar should be an inducement for you to buy the get of Giant Invincible. Mr. Cain sells boars and gilts at Skyberg on Tuesday, October 30th. In this sale there will be 30 head sired by the $2,500 yearling—22 spring boars and eight spring gilts. Cain is selling some good pigs and the kind that will please the buyer. They are not carrying a lot of excess fat—they have good backs and feet and plenty of stretch, and there are boars in this sale just as good as their sire was at the same age. The dams are well bred. Several of them are out of sows that are line bred King of Cols. Breeders, if you don't need a boar, attend this sale and buy one or more of the gilts that are selling. If you don't want to keep them, put them in your winter sale bred to a good boar and we feel safe in saying you can double your money on them. Giant Invincible boars and gilts are going to be good property just the same as Great Wonder and Grand Model—you all know what you have to pay for the get of these boars. You will never have another chance to buy the get of this boar as cheap as in the Cain sale. Now is your opportunity. If you can't possibly attend this sale, send your buying orders to T. P. Shreve, in care of J. J. Cain, Skyberg, Minn. The catalog is interesting. Write for one at once and please mention The Wisconsin Farmer. Note the advertisement on page 26.—Adv.

NEXT WEEK'S SALE PROGRAM

Tuesday, October 23	Holstein-Friesians, Lake Mills Holstein Sale, Lake Mills, Wis. Poland Chinas, Drewelow Bros., New Hampton, Iowa.
Wednesday, October 24	Holstein-Friesians, Lake Mills Holstein Sale, Lake Mills, Wis. Poland Chinas, R. F. Brunker & Sons, Ridgeway, Wis.

Shea and His Good Durocs.

HAVE you written Dennis Shea, Melvina, Wis., about those good Duroc boars he has for sale? If you have not you are making a mistake, for Dennis has the goods. We have often written about this herd and we are glad to recommend the Shea Durocs, for he raises a class of hogs that give satisfaction and Dennis is absolutely on the square. Besides having them well grown, weighing from 175 to 280 pounds, they are smooth, with good feet and bone and they carry a line of breeding that no one need be ashamed of. Some of the good ones are sired by his Pathfinder boar, and every Duroc man has heard of Pathfinder. The best boar on the Shea farm is Col.'s Choice. This boar is big and smooth and his get have the same good qualities. He is a good son of King the Col. Then another good boar, though there are only a few boars for sale by him, is Pal's Defender, a son of Lee's Defender. Shea has some of the best, big sows in the state and boars out of these good sows sired by the above boars are no disappointment. Get in touch with this good breeder and please mention The Wisconsin Farmer. See advertisement on page 26.—Adv.

Orrin Hake, Jefferson, Wis.

MR. HAKE, who is one of the most progressive Holstein breeders in Jefferson county, is now using at the head of his herd a 29.15-pound son of King Pontiac Champion, an A. R. O. sire with 62 daughters to his credit, one of the best known A. R. O. bulls in the state of Wisconsin. The dam of Mr. Hake's bull, K. S. P. Dione, not only has a 29.15-pound seven-day record, but also has a 724.25-pound semiofficial yearly record. She is by King Segis Pontiac, that has 57 A. R. O. daughters and has sired probably more high-priced bulls than any other bull of the breed. The dam of K. S. P. Dione is sired by De Kol Second Butter Boy 3d, one of the great bulls of the breed, having over 118 A. R. O. daughters. Mr. Hake reports that the calf crop from this young bull is the most promising which he has ever had, so that he will soon be in a position to furnish some splendid bull calves at reasonable prices from his well-bred herd bull. See advertisement on page 25.—Adv.

Kirkpatrick Bros.' Recent Sale.

ORRIE KIRKPATRICK writes us that the Hillside Stock Farm, Reedsburg, Wis., which is owned by Kirkpatrick Brothers, has just shipped two of the ten registered Holsteins recently advertised in The Wisconsin Farmer. These two cows go to Green Bay and were the largest ever shipped out of Reedsburg, weighing 3,480 pounds. These cows were also bred to their senior herd sire, Senator Johanna White, that stood second in the aged bull class at the Wisconsin State Fair this fall. Senator Johanna White was bred by R. J. Schaefer, Appleton, Wis., and is a 31.07-pound bull out of one of Mr. Schaefer's best cows that also has a semiofficial yearly record of 1,146.78 pounds butter. The picture of this bull appeared in The Wisconsin Farmer in the report of the Wisconsin State Fair, which indicates the splendid type of animal he is. Kirkpatrick Bros. also have a number of other cows for sale that are bred to this splendid bull. See advertisement on page 25.—Adv.

Orion Col. S.

THE above son of the $2,500 Col. S. Jr. was first-prize aged boar at the Minnesota State Fair, Chippewa Falls and La Crosse. This is the good boar owned by W. C. Jenkins, Bangor, Wis. No man in the Duroc game has made such an improvement in his hogs during the past year as Jenkins. He now owns a herd of sows, numbers considered, that are second to none in the state, and they will be bred to Orion Col. S. for spring litters. The Lady Top Notcher sow that Jenkins recently paid $380 for is raising seven September pigs by the noted Investor. A few gilts will be offered for sale bred to Orion Col. S., and, as Mr. Jenkins only has a limited number of gilts that he will sell, he wishes you to place your order early. Let him quote you prices on these gilts. The demand for the get of this boar was keen this year, consequently he is sold out of spring boars. In writing, will you please mention this journal? See advertisement on page 26.—Adv.

Madson Buys Good Big-Type Boar.

M. MADSON & SONS, Madison, Wis., have added some good Polands to their herd during the past two years. They have bought some of the very best big-type breeding, in both sows and boars. Their most recent purchase was a spring boar in the Bert Irwin sale. They bought a son of Bill's Chief that is a half brother to Chief Defender, the Illinois grand champion and a son of Mouw's Chief. The dam of the Madson boar is Oakland's Choice by the $1,000 Oakland's Equal. This was a real herd-boar prospect, and, as the Madsons know how to feed and grow boars, we expect to see an outstanding boar in another year. Don't forget their spring pigs—either sex. We saw them some time ago and they will not disappoint you. Note what they are sired by and if you are going to want gilts or a boar write this firm at once and please mention The Wisconsin Farmer. See page 27.—Adv.

Some Good Boars Left.

E. H. PARKER & SON, of Janesville, Wis., had some 40 Duroc boars when the season opened, many of which were by the sensational King Orion, Wisconsin's greatest champion. Just at this time they have a dozen or more real good boars sired by King Orion. These boars are right in every way and will fill a mail order to satisfaction. They are out of sows sired by the champion Illustrator, Volunteer, daughters of the great Orion Chief, Marion's Wonder and Lee's Defender, and others. Besides spring boars sired by the grand champion, they have some good ones by Pal's Chief Col., a King of Cols. bred boar. Don't forget the Parker Durocs. You can't get better or more popular breeding—it isn't written and the stuff is good individually. We are glad to recommend the Parker prolific porkers. Write for details and in so doing, please mention The Wisconsin Farmer. See advertisement on page 26.—Adv.

Kirst Buys Herd Boar.

WE have just been advised that A. L. Kirst, Chester White breeder living at Tomah, Wis., has purchased a spring boar sired by Cardinal, a good son of old Chief Keokuk. His dam, Ladylike 29204, is sired by Highland Chief 23019. In this boar, Mr. Kirst has one of the best-bred pigs in the state. He advises us that he weighed 275 when he got him home, which is a good weight for a spring pig. This boar will be mated to the good sows and gilts in the Kirst herd. See advertisement on page 27.—Adv.

Good Offering of Poland Chinas.

ON October 23d Drewelow Bros., New Hampton, Iowa, will sell 40 Poland Chinas, 15 of which are gilts and 25 boars. The entire offering is of spring farrow, the pigs being sired by Orphan Pawnee, a good breeding son of The Big Orphan. The dams come from a number of the most noted herds of Poland Chinas in the corn belt. Some of the sows in the herd are direct descendants of state fair prize winners. This offering is backed up by a line

CARPENTER & CARPENTER'S

SCOTCH SHORT-HORN SALE

CHICAGO, ILL., Stockyards Sale Pavilion WEDNESDAY, OCT. 31, 1917

40 Head---Cows with Calves, Heifers and Bulls---40 Head

FEATURE OF FALL SALES: **Maxwalton Queen and Bull Calf,** the undefeated show cow of 1914, 1916 and 1917. The greatest show and breeding cow sold in recent years. Violet Maid 3d and bull calf, Collynie Mysie and heifer calf, Anoka Clipper 3d, Collynie Queen out of Maxwalton Queen, Collynie Mint Drop 2d and calf. This is only a few of the show cows and heifers. BULLS: Collynie Cullen 5th, a choice roan senior yearling; Collynie Archer by Village Baronet out of Violet Maid 3d; Collynie Cullen 6th, dam by Avondale; other good ones. Notice 50 per cent of the offering out of Avondale bred dams. There will also be a few Canadian bred heifers. **Everything of best Scotch breeding.** Jones, Reppert and Milne, auctioneers. Write at once for a catalog. Address

CARPENTER & CARPENTER **BARABOO, WISCONSIN**

of breeding that is hard to improve upon and the pigs are of the type and of the conformation that will please the breeder and farmer. See page 27 and write for a catalog, kindly mentioning this paper.—Adv.

McDermott's Short-horn Offering.

J. W. McDERMOTT, Kahoka, Mo., is consigning to the Carpenter and McDermott sale at Chicago, October 31st, 30 head of as good Short-horns as he ever sent through a sale ring. With but two exceptions they were all bred and by Mr. McDermott, and practically every one is either sired by or closely related to the great sire, Cumberland Marshal. Mr. McDermott has bred and shown many good Short-horns, and the lot that he will forward to the Chicago sale will rank with any that he has ever offered to the public. Some great young bulls are listed in this offering, among them Cumberland Repeater, one of the herd bulls, by King Cumberland. Cumberland Marshal 5th by Cumberland Marshal, out of a dam by Uppermill Omega, is a high-class youngster in any company. His half-brother, Cumberland Marshal 6th, will also bear the closest inspection from the man wanting all that is best in a bull. Some wonderfully attractive females by Cumberland Marshal will be offered, including Cumberland Rosemary, a sister to Village Marshal, the bull that is making so good a reputation at the head of the herd of Tomson Bros., of Kansas. There are no excuses to be made for any animal in the lot. They are a collection of honest Short-horns, not specially fitted for the sale, being offered in only moderate condition, but they are the kind that can be depended upon to give a good account of themselves, and they come from the herd of one of the country's most reliable and progressive breeders. You will make no mistake by attending this sale and buying some of these cattle. In the same sale Carpenter & Carpenter, Baraboo, Wis., will sell 45 head of outstanding good ones, the two lots making a total of 75 head, and comprising as choice an offering as has been put in front of the American buyer in many a day. Write today for the catalog to either Carpenter & Carpenter, Baraboo, Wis., or J. W McDermott, Kahoka, Mo. Kindly mention this paper when you write.—Adv.

Those Fennimore Durocs.

WHILE in Grant county recently we stopped off at Fennimore, the home of those good Durocs. The breeders are planning now to put up a good lot of bred sows in their first sale next winter. The exact date is not settled as yet, but it will be the week of February 11th, and from the present prospects they will have "the goods." We spent some time with W. C. Edge, who has one of the best herds around Fennimore and who owns W. C.'s Defender, the undefeated yearling boar of Grant Co. Mr. Edge showed this boar against all breeds at various fairs and we have been advised that he was a winner wherever shown. He is a good boar in every respect and is a 700-pound yearling. Edge is one of the best feeders and caretakers that we have met and we predict that he will soon have one of the best herds of Durocs in the state. He has boars for sale and solicits a portion of your business.—Adv.

Durocs at Lancaster.

WISCONSIN men have heard a great deal about Lancaster, for that is the headquarters of the Grant county Polands, but J. D. Beetham represents the Durocs in that vicinity. Just at this time he is offering spring boars at reasonable figures and if you get in early, you will get your money's worth. He also breeds Short-horn cattle and if you want a bull ready for service, he has two that he guarantees to please you in every respect. It will pay you to write J. D. Beetham, Lancaster, Wis.—Adv.

George McKerrow & Son's Company, Pewaukee, Wis.

THE McKerrows are, as is their custom, putting in eight females with unsurpassed breeding to the Waukesha County Guernsey Breeders' Sale; two are daughters of Governor of the Chene, two daughters of Myrtle Place 2d and others with equally good breeding. See the advertisement on page 28.—Adv.

Good Medicine Promotes Animal Health.

IT always pays to buy the best, particularly with medicines, either for humans, beast or fowl. When health is concerned, no expense should be spared to make the afflicted well and prevent the well from getting sick. All poultry or stock raisers should see that they have at hand a good tonic and medicine ready for instant use. It should be used in case of sickness, or better still, be given at every meal to enable fowl and beast to digest their food. Failure to do this is one of the greatest causes of disease among stock, as they will always eat more than is good for them and a tonic is necessary. One of the best-known poultry and stock remedy manufacturers is Dr. Hess & Clark, Ashland, Ohio. They prepare a complete line of poultry and stock foods, chief of which is Dr. Hess Stock Tonic and Dr. Hess Poultry Pan-a-ce-a. They also make Dr. Hess Dip and Disinfectant. The first two are essentially to remedy internal disease and tone up animal systems generally, while the latter two are to destroy vermin and the like. Dr. Hess Poultry Pan-a-ce-a and Dr. Hess Stock Tonic are made up of chemicals known to and prescribed by the best doctors of veterinary science for aiding the digestion and curing other diseases of stock and poultry. All of these preparations have been compounded by Dr. Gilbert Hess, a Doctor of Medicine as well as of Veterinary Science, and also a practical poultry and stock raiser. You have accordingly the benefit of both practical and scientific knowledge, as all of the preparations are results of his years of experience in practice. Dr. Hess & Clark also guarantee through their 28,000 dealers that, if their preparations do not do as claimed, your money will be returned by your dealer upon receipt of the empty packages.—Adv.

Illustrator Joe.

THE above is the name of the Duroc boar that is the sire of the good spring pigs that Phillips Bros., Delavan, Wis., are offering at this time. Illustrator Joe is sired by the champion, Illustrator, that sold for $2,000 and is out of a Joe Orion dam. This gives you a combination of breeding that could not be improved upon. The dams of the pigs for sale are sired by Pal's Premier, Cherry J. King, Taxpayer Model, Fancy Col., Cherry Chief and Lee's Defender. Good boars and gilts out of these sows should do you some good. They also have a yearling boar for sale sired by Cherry J. King, he by Cherry King, out of a sister to John's Combination. Write this firm for their prices and description of the spring boars and gilts that they offer. They have some good Durocs. In writing please mention The Wisconsin Farmer. See page 27.—Adv.

J. W. Williams, Waukesha, Wis.

MR. WILLIAMS is consigning six females to the Waukesha County Guernsey Breeders' Sale that are not only well bred, but high-class individuals as well. Several of this number are daughters of the great prize-winning bull, Rhea's King of the May. Mr. Williams is also consigning a prize winning bull, sired by Rhea's King of the May. See the advertisement on page 28.—Adv.

George W. Browne, Waukesha, Wis.

MR. BROWNE is consigning 11 females to the Waukesha County Guernsey Sale in addition to a dam that has a record of 717 pounds fat. The females include A. R. cows and daughters, as well as granddaughters of Rhea's King of the May and Governor Whimsome, a son of Governor of the Chene.—Adv.

William M. Jones, Waukesha, Wis.

MR. JONES is consigning six females, including A. R. cows with records, with 696 and 490 pounds fat and daughters of Lord Waukesha and Lord Yeksa. All of these females are bred to his junior herd sire, Yeksa Tops of Gold's Boy, that is from his noted cow, Yeksa Tops of Gold's Fanny, with 981.53 pounds fat, 19,794 pounds milk, a record that places this cow fourth in the production of fat and third in the production of milk in the breed. Yeksa Tops of Gold's Boy is one of the largest, most promising young Guernsey bulls that we know of and comes from a line of ancestry that can scarcely be surpassed. Cows bred to a bull of such merit should attract the attention of buyers looking for something out of the ordinary. See advertisement on page 28.—Adv.

"Speed Up" Your Stock

Turn the "slackers" into workers. Help the producers to do still better. Turn out lots of animal products at high prices. Cut feed costs and increase profits. Put your horses, cattle, sheep and swine in perfect physical condition with

Pratts Animal Regulator

the original guaranteed Stock Tonic and Conditioner

Producers and workers must be vigorous and healthy. Pratts Animal Regulator makes them so. Not a food, but a combination of tonics and conditioners mixed with the regular feed, which sharpens the appetite—assists digestion—regulates the bowels—purifies the blood—tones up the entire system—prevents waste of feed—insures health. Give Pratts a fair trial at our risk under these terms:—

Carpenter & Carpenter's Extraordinary Short-horn Offering.

CARPENTER & CARPENTER, Short-horn breeders and showmen of Baraboo, Wis., and J. W. McDermott, of Kahoka, Mo., will have a wonderful lot of cattle to sell in their Chicago sale, Wednesday, October 31st. This will be Carpenter & Carpenter's first sale of Short-horns and for this event they have drawn heavily on their herd of show cows and heifers. The feature of this sale, in fact, the fall sales, will be the selling of the great show and breeding cow, Maxwalton Queen. This granddaughter of Avondale is one of the greatest show cows of recent years. She is an undefeated Short-horn cow, winning in 1914, 1916, 1917, and the man fortunate enough to get her will have one of the finest matrons of the breed. She sells with a bull calf at foot. A daughter of this cow sired by imported Lord Cullen also sells in this sale. Besides Maxwalton Queen there are other outstanding cows and heifers that have been winners in the Carpenter show herds of the past few years. There are several calves at foot sired by the imported Lord Cullen. Many of the females are safe in calf to Collynie Type, a son of Cumberland's Type. There will be nine bulls of serviceable age, any one of which is good enough to head choice herds of registered Short-horns. One of the good things in the bull line is an Augusta sired by "Cullen" out of Maxwalton Augusta. The important thing to do at this time is to get the catalog. You cannot help but appreciate these cattle after you see their breeding as listed in the catalog. As individuals, they will please the most critical. Write for this catalog to Carpenter & Carpenter, Baraboo, Wis., but remember that the sale will be held in Chicago. Watch next week's issue for a description of some of the outstanding bulls and females listed for this sale.—Adv.

McKerrow's Oxford and Shropshire Lambs.

IT HAS occurred to us that many of our readers may be of the opinion that George McKerrow & Sons Company, of Pewaukee, Wis., sold all of their yearling Oxford and Shropshire lambs at their recent sale which was held August 15th. This, however, is not the case, as Gavin McKerrow has just informed us that they have as nice a selection of yearling rams as they have ever had to offer at this time of the year. There are 25 yearling Shropshires all carrying the blood of noted sires; there are also a number of large ram lambs, that they are offering for sale. In Oxfords they have a nice lot of yearling rams in addition to 100 ram lambs. Selections can be made from this lot which would please the most critical. See the advertisement on page 28.—Adv.

TOO LATE TO CLASSIFY.

Tratt Guernsey Herd

THIS HERD was established over thirty years ago. We have always tried to breed from the best. Just at present we have some very promising bull calves, also a few females, for sale.

RALPH TRATT Whitewater, Wis.

GIANT INVINCIBLE, the DUROC JERSEY BOAR $2,500

25 Spring Boars, 25 Spring Gilts Sired by Giant Invincible and J. C. Illustrator Sell at

SKYBERG, MINN., TUESDAY, OCT. 30

22 Spring Boars Sired by the $2,500 Giant Invincible, 10 Gilts by Giant Invincible.

15 Spring Gilts and 3 Spring Boars by J. C. Illustrator, the Sire of my Futurity Winners.

GIANT INVINCIBLE, the 700-pound yearling for which Jake Waltemeyer paid me $2,500 in cash.

THE boars are in fine condition for immediate service. Don't forget that GIANT INVINCIBLE is the real big kind and is going to be highly advertised from now on by his present owner. YOU buy a boar by GIANT INVINCIBLE and you get the benefit of the advertising. His pigs are going to be big with plenty of stretch and good backs. The dams are well bred and good breeding sows. I sell a few boars and gilts sired by J. C. ILLUSTRATOR, he by Illustrator out of a Cherry Chief dam. He sired my futurity winners last year and my show pigs this year. He is a great breeding boar and his pigs have made good for others. Am selling some good gilts by GIANT INVINCIBLE. Breeders should buy these for this breeding will be good property in another year. These spring pigs will not be in high flesh, they are in a good thrifty condition and can go right into service. Am selling boars good enough for the best herds. Gilts that will make big sows. **The best breeders will eventually want GIANT INVINCIBLE breeding. You can buy of me cheaper than Waltemeyer.** SKYBERG is 58 miles south of St. Paul on the Great Western, 70 miles west of Wabasha on the Milwaukee, and coming from La Crosse and Winona, change cars at Dodge Center. The best of railroad service to and from this sale for WISCONSIN buyers. WRITE AT ONCE FOR MY DESCRIPTIVE CATALOG and mention The Wisconsin Farmer. Send mail bids to T. P. Shreve, field man for The Wisconsin Farmer. H. S. Allen, auctioneer. Address

J. J. CAIN SKYBERG, Goodhue Co., MINN.

PRIZE-WINNERS AND PRODUCERS

AT AUCTION WAUKESHA, WIS., OCTOBER 31-NOVEMBER 1

75 HEAD OF REGISTERED GUERNSEYS

RED CROSS LADY 74661

THE WAUKESHA COUNTY GUERNSEY BREEDERS' ASSOCIATION will hold their ELEVENTH AND SEMI-ANNUAL Sale of PURE-BRED GUERNSEYS at WAUKESHA, WISCONSIN, OCTOBER 31ST and NOVEMBER 1ST. Seventy-five head of pure-bred females will be offered October 31st and these animals have been selected with the aim of making this sale a record breaker, and to do this only animals of special merit, both as to breeding and individuality, have been accepted. Among this splendid offering will be found the following consignments: Chas. L. Hill offers 25 head of very high-class cows and heifers, among them being A. R. cows with records as high as 615 lbs. fat, choice heifers bred to such sires as Itchen May King, Dairymaid's Nonpareil of Iowa (dam's record 825 lbs. fat), Florham Victor (son of Ne Plus Ultra), etc. He will also offer 5 bulls, backed by prize winners and large producers. John H. Williams offers 6 females of splendid May Rose breeding, several of which are daughters of a great prize winner, Rhea's King of the May. Also a bull who is a prize winner and sired by Rhea's King of the May. Geo. McKerrow & Sons Co. will consign 8 females, the breeding of which cannot be surpassed. Two of them are daughters of Gov. of the Chene, 2 daughters of Gov. of Myrtle Place 11th, and the others are equally as well bred. Wm. M. Jones' consignment consists of 6 females, including A. R. cows with records of 696 lbs. and 490 lbs. fat, and daughters of Lord Waukesha and Lord Yeksa. Geo. W. Browne offers 11 females in addition to a male whose dam has a record of 717 lbs. fat. The females include A. R. cows and daughters and granddaughters of Rhea's King of the May, and Gov. Whimsome (a son of Gov. of the Chene). Fruit Brothers are consigning an A. R. cow with a record of 649 lbs. fat, sired by Glenwood's Stranford. Geo. Lawson will offer a son of Rhea's King of the May and whose dam has a record of 568 lbs. fat. Goodhand Kingston offers 2 females, one with a record of 411 lbs. fat at 2 years. Geo. Konrad will consign 2 females, including a granddaughter of The Conqueror 2d, whose daughters have records of 928 lbs. fat, 710 lbs., 756 lbs. fat, etc. Other consignors will be H. Riedeburg, L. J. Wendt, Crouch Brothers, J. M. Harvey, F. E. Kummrow, J. R. Love, John L. Williams, C. J. Mitchell, Basse Brothers, Earl Roberts, Wm. Fisher, Connell Bros., F. C. Smith and Freehoff Brothers. ON NOVEMBER 1ST—50 head of very high-grade Guernsey cows and bred heifers will be sold. The grades offered are all very high class, well marked, good producers and should be valuable additions to any herd, pave the way for a good foundation herd. They have all been carefully inspected and will be tuberculin tested.

SPECIAL FEATURE—RED CROSS LADY

(See above illustration)

a pure-bred Guernsey heifer, a double granddaughter of Gov. of the Chene, will be sold October 31st. The money received will be given to the Red Cross Society. She was donated to the Waukesha Association by one of its generous members, Geo. W. Browne, Waukesha, Wisconsin. Show your patriotism and bid on her.

Auctioneers: Love, Baily, Benjamin, Beaumont, Hellen. Write for illustrated catalog.

Hog Feeding Experiments

ON ACCOUNT of the serious shortage of pork throughout the country and the difficulty which swine feeders are experiencing in using feedstuffs at present record-breaking prices there is great interest in swine feeding experiments which are being conducted at our several stations. Unfortunately the fact that hogs are worth more now than ever before has proved an incentive to selling rather than a stimulus to increase production. The situation now confronting the swine men of our country is clearly set forth by Dean C. F. Curtiss, of the Iowa Station. He calls attention to the fact that there is already a shortage of 8% in the hog crop. At the same time the allies are calling upon this country for a pork production 15% above normal. This means that there is great danger of falling 23% behind the production which we need to supply ourselves and our allies in the great world's conflict against Germany. Dean Curtiss urges every farmer to save as much breeding stock as possible and to forego the temptation to get immediate returns. F. G. Ashbrook, of the Bureau of Animal Industry at Washington, recently brought out before a group of swine breeders the fact that fats and oils are in great demand in Europe and of course the hog is one of the best producers of fat which we have. Thus it is argued that the production of hogs on farms is very closely linked with the success of our forces in the trenches. It is announced to be the opinion of leading packers that we must increase the number of swine or place pork over in the class of luxuries. The hog market has already reached such a point that it is at a proportionately higher level than the cattle market. Undoubtedly there would be many more sows in the country at present if the prices of corn and hogs were lower. It is estimated that tens of millions of pounds shrinkage could be met this year in the supply of pork that would go into the hands of packers. There appears to be very little danger of overproduction of pork, and packers and experiment station workers advise the farmers to prepare as many sows as possible for spring farrowing, since present indications point to a strong demand for spring pigs.

John M. Evvard was one of the chief speakers at Madison on the last swine week program. He has recently discussed the work of experimental feeding at the Iowa station, and The Wisconsin Farmer takes pleasure in presenting some of his later conclusions. One experiment deals with the problem of substitutes which may be used for corn when pigs are running on blue grass pasture and also when they are on rape. The substitutes tried were hominy feed, oat meal and standard wheat middlings. Four of the eight groups of pigs used were on blue grass pasture and four on rape. On blue grass the feeding period lasted 110 days and on rape ninety days. One group of pigs on blue grass received straight shelled corn in self-feeders, the second group hominy feed, the third oat meal and the fourth wheat middlings. The same system of rations was used with the four groups on rape. All groups received tankage in addition in order to supply protein to stimulate growth of bone and muscle.

CORN OIL CAKE REDUCES TANKAGE CONSUMPTION.

The pig on the left received corn, tankage and corn oil cake; the pig on the right, corn and tankage. The pig on the left gained more and ate twenty-six pounds less tankage per hundred pounds gain.

HOMINY FEED GIVES GOOD RESULTS.

The pig on the right received hominy feed and tankage on blue grass; the pig on the left, corn and tankage on blue grass; the pig on hominy feed made nearly as good gains as the corn-fed one.

BALANCED RATIONS PRODUCE LARGEST GAINS.

The pig on the left received corn alone; the middle pig received corn and tankage; the pig on the right, corn and a mixture of gluten feed and tankage.

The corn-fed group of pigs on blue grass made an average daily gain per head of 1.19 pounds, those fed hominy feed 1.12 pounds, those fed oat meal .91 pound and those fed wheat middlings .93 pound. Besides the rate of gain the cost per hundred pounds of gain was figured as follows: For the corn-fed lot $13.55, for those fed hominy feed $14.40, for those fed oat meal $12.57, and for those fed wheat middlings $13.16. These costs were calculated on the basis of corn at $2 a bushel, hominy feed at $71.42 a ton, oat meal $50, standard wheat middlings $55, tankage $90 and block salt $20. By referring to the average daily gains, it may be seen that next to corn hominy feed produced the most rapid gains, but considering cost of gain it was the most expensive feed used. Although gains produced by oat meal and middlings were somewhat slower, they were also cheaper. Thus under the conditions of the experiment and when rapid growth is desired, hominy feed is the best substitute for corn.

On rape pasture the case is different. Here oat meal takes second place to corn by producing an average daily gain per head of 1.21 pounds as compared with 1.08 pounds produced by hominy feed and 1.06 pounds produced by wheat middlings. The corn-fed pigs made 1.25 pounds daily gain. The cost of gain per hundred pounds was $10.22 for the pigs fed oat meal, $14.48 for those fed hominy feed, $11.42 for those fed wheat middlings and $12.83 for those fed corn. In this case the cheapest gains, as well as the most rapid, were produced by oat meal. This experiment suggests that oat meal, which is a by-product of the oat meal breakfast food industry, should have a more prominent place in swine rations. The fact that it is a splendid supplement to rape is especially important.

Another experiment seeks to determine the value of gluten feed for young pigs on rape pasture. Several groups of pigs, averaging from forty-five to fifty pounds at the start, were fed for ninety days on different combinations of corn, gluten feed and meat meal tankage. Each group had free access to an unlimited amount of the ration allotted to it, the feeding being done in self-feeders. The group which received corn alone made an average daily gain per head of .84 pound and each 100 pounds gain cost $12.17. The group fed gluten feed alone made an average daily gain of .70 pound. However, their cost of gain was low, being only $11.18 per 100 pounds. When tankage was added to gluten feed, the average daily gain became .86 pound and the cost per 100 pounds gain increased to $12.89. When corn, gluten feed and tankage were all fed the average daily gain jumped to 1.25 pounds and the cost of gain became $12.93 per 100 pounds.

In still another experiment corn oil cake was used as a partial substitute for tankage. Six groups of pigs, averaging fifty pounds at the start, were fed for 110 days on a timothy-blue grass pasture.—(Concluded on page 10.)

CURRENT EVENTS

THE second liberty bond drive occupied the attention of the nation last week and this, to the exclusion of almost everything else. The first liberty bond issuance was for two billion dollars and was easily raised. This second issuance is for three billion dollars, the government to accept, in addition, one-half of whatever amount is subscribed in excess of that. These second bonds bear 4 per cent interest and will be given to holders of the first bonds, bearing 3½ per cent, just as soon as an equitable trading arrangement can be agreed upon. While it is impossible at this writing to tell what the ultimate subscriptions will be, there is good reason to hope that the entire three billion dollars will be pledged. The campaign was slow in opening, only one-third of the entire amount being raised in the first two weeks of the month's campaign. In this crisis, President Wilson issued an official proclamation setting apart Wednesday, the 24th, as liberty bond day, saying: "The second liberty loan gives the people of the United States another opportunity to lend their funds to their government to sustain their country at war. The might of the United States is being mobilized and organized to strike a mortal blow at autocracy in defense of outraged American rights and of the cause of liberty. Billions of dollars are required to arm, feed and clothe the brave men who are going forth to fight our country's battles and to assist the nations with whom we are making common cause against a common foe. To subscribe to the liberty loan is to perform a service of patriotism. The people responded nobly to the call of the first liberty loan with an oversubscription of more than 50 per cent. Let the response to the second loan be even greater and let the amount be so large that it will serve as an assurance of unequaled support to hearten the men who are to face the fire of battle for the United States. Let the result be so impressive and emphatic that it will echo throughout the empire of our enemy as an index of what America intends to do to bring this war to a victorious conclusion." The campaign closes Saturday night and the results will be announced in next week's paper.

LONDON newspapers publish a review of crop and food conditions in Germany, which they picture as rather black. They assert that a special investigation of the 1917 harvest, ordered by the German chancellor, disclosed that the yield will be 40 per cent lower than in normal years for wheat and 45 per cent lower for rye, oats and barley. The total harvest of wheat and rye amounts to 7,500,000 tons, compared to 13,000,000 tons in 1913. The shortage will be partly compensated from the Rumanian granaries. The reviewer considers that the food situation in Germany during the coming winter will depend mainly on the results of the potato harvest. At present potatoes are being delivered with fair regularity, but should frost, lack of labor or other reason cause a shortage in potatoes, it will spell disaster. The situation in Austria-Hungary, it is declared, is worse than in Germany. Shipments by the United States to neutral European nations are being curtailed and in some instances shut off altogether, in the hope of keeping foodstuffs from reaching the Germans. Every possible effort will be made to compel Germany and Austria to depend upon their own resources and not to secure foodstuffs from Sweden, Holland and other neighboring countries, as they have done for the past three years.

WM. J. BRYAN resigned from President Wilson's cabinet because he feared the president's policy was tending toward war. Notwithstanding this fact, however, he is among the leaders who assert that the president should be upheld in the present crisis and that every loyal American should do his part toward winning the war. Every American's paramount duty is to stand behind the president and congress and support "anything and everything our government does in this war," William J. Bryan told members of the New York Advertising Club. "The furnishing of money," said Mr. Bryan, "is one of the most important ways of supporting the government. Before we entered the war it was a matter of opinion and discussion, but it is no longer a question of opinion. It is time for action now." He declared he would make no complaint against high taxes as long as there are men giving their lives for the country. "I shall not put the dollar above the man nor property above blood," he said.

THE eastern states face a sugar shortage with no prospect of relief before late in November, when the new Hawaiian western belt crops arrive. In a statement forecasting the shortage, the administration again appealed to the American people to cut down their consumption of candy and sweet drinks and at the same time gave warning that retailers have received the stocks at prices recently agreed upon and the public should pay no more during the temporary scarcity in the east than it has been paying during the past thirty days. The shortage is due, the administration says, to the failure of the public outside of a few loyal homes to reduce consumption and the unusual exports to France in order that the French people may have their meager ration of sugar per person per month.

THE coal situation remains serious. The government's efforts to regulate prices have not resulted in the consumer getting his fuel supply any cheaper. The price has not risen, in many sections, but danger now of a miner's strike makes the outlook worse than for some time past. Threat to seize the coal mines and operate them on behalf of the government was made by the coal dictator, Harry A. Garfield, in telegrams to miners and operators of mines in Indiana, Illinois and Ohio, where strikes make a tie up of mines imminent. Dr. Garfield said he was fully prepared to carry out the threat contained in the telegrams. He said that under no circumstances would he permit a strike to tie up production in any of the large mines of the country, especially at a time when every ton of coal is needed to avoid a serious coal famine in the United States. "I am not attempting to judge who is at fault in the troubles that have led up to the threatened strikes," he said. "A strike would be in clear violation of the agreement made by the men to keep on working. Consequently it is up to them to go ahead and settle their difficulties after the war." It was understood that the threatened strikes in Ohio, Indiana and Illinois were not only serious because of the coal that they would tie up in the mines at which strikes took place, but also because of the fact that there was danger of the strikes spreading to Iowa, West Virginia, Pennsylvania and other states in the vicinity of those where the strikes are threatened.

EASTERN railroads, seeking relief from conditions which their executives assert are rapidly approaching the point where they can no longer operate with profit, indicated the form their efforts will assume, in a letter to the interstate commerce commission asking for a conference to consider rates not included in the advance allowed by the decision in the 15 per cent rate advance case last June. Indications are that the railroads have in mind filing applications for increased rates on a large number of commodities not already raised, if it should develop at the conference that the applications might meet with any measure of success. The commission, replying to the request for "a short informal conference," notified the roads that it would be glad to hear them at "a public session." The railroads of both the East and West maintain that the price of labor and of coal has risen so high that they are losing money at the old passenger and freight rates. Within the past two months the western roads have fallen below their banner figures of a year. Gross receipts have been much higher, but operating expenses have outstripped the increase.

HENRY FORD, the automobile manufacturer, is looked upon as the chief pacifist of the country, he having headed the Ford mission to Europe a couple of years ago in an attempt to get the soldiers out of the trenches by Christmas and to bring about world peace. But he sees the present situation must be met by other than pacifist methods. He contributed $5,000,000 and the Ford Motor Company made a similar contribution to the liberty loan. Ford's subscription was accompanied by a statement declaring that the United States in making war on Germany did the "best thing that ever happened for the world. Although there is not a man in the world more opposed to war than myself, I see that we must support our government to the limit in this war because our president is pledged to abolish future wars as far as possible," said Ford in his statement. It has been known for some time that enemies of the government have been attempting to spread propaganda among workmen in Detroit and elsewhere, to the effect that Ford was opposed to the United States declaring war on Germany. Ford's statement and his latest war contributions are expected to effectively crush these activities.

URUGUAY is one of the minor countries of South America, but it joins the world-wide war against Germany with great enthusiasm. At a great public meeting at the Uruguay capital last week, the president delivered a speech in which he reaffirmed the sympathy of Uruguay for the Belgian cause and the solidarity of the republic with the countries which are fighting for the cause of justice and right. "I know," said the president, "that you were anxious to occupy in this league of honor the place due to you for your lofty ideals, which suffered so cruelly through the insults offered to civilization when Belgian sovereignty was violated, when solemn treaties were openly disregarded, when the rights of neutral countries were ignored and when the regulating principles of the society of nations were derided. People of Uruguay, the hour has struck! We are no longer indifferent in the face of the formidable struggle in which justice and democracy are writhing under autocratic oppression. Thus is fulfilled the mission entrusted to me. I have proceeded in conformity with the inspiration of your lofty ideals. We now are in the league of honor."

Drain Every Swamp Acre You Own

War time profits demand that every acre be made more productive. Draining land doubles its value. But while you are at it, do a good job. Half the cost of draining is in ditching, hauling and laying the tile, and back-filling. Use the best tile you can get. It's poor economy to buy tile that shows heavy breakage in handling or that crumbles in the ground. Stopped up drains are worse than no drains. And replacing broken tile is expensive.

Use HAEGER Everlasting Drain Tile

The *standard* for *thirty* years. Strong, straight and well-burned. Once laid you needn't worry about *Haeger Tile Drain.*

GET THIS BOOK—It's called "Farm Land Drainage," and contains much of interest even for the practical farmer who is well versed in drainage methods. We have a copy for you. Just ask us for it. A postal will do.

Buy direct or through your dealer. Look for the "DIAMOND H" mark.

Wonderful Kirstin Horse Power Stump Puller

Sent Free on 30 Days Trial

To prove KIRSTIN Horse Power Pullers the cheapest and best way to clear your land of stumps, hedge and brush, we ship complete outfit **without one cent in advance.** If satisfied, take a **half year to pay** or return at our expense and keep your money.

KIRSTIN Pullers are miracle workers—nothing like them. With KIRSTIN'S you can

Clear An Acre A Day

Special Triple Power Feature pulls biggest, toughest stumps easily besides gives long reach to clear two acres from one anchor.

No other Puller works so quickly, easily and economically. Can be used with single, double, triple power—as needed. Has Automatic Take-Up for quick hitching. All-steel construction—not cast iron. Unbreakable. Guaranteed three years, flaw or no flaw.

Write for particulars of all types Horse Power and One Man Stump Puller. Easy work in spare time will add $50 to value of your farm. Find out how upon request.

FREE Trial Order Plan, Low Price, Big Stump Puller Book and Special Offer sent on request. Write today.

Asking for Tractors Out West.

An Enormous Demand for This Modern Form of Power to Take the Place of the Horse—By H. A. Crafts.

THE introduction of the gas tractor is working great changes in California and farm methods. These changes are especially observable in the plowing and cultivating of the land.

California has always been a land of the plow; especially of the gang plow. The early farms were of a very large individual acreage. These were the so-called "Bonanza" farms, a single one containing thousands of acres.

In 1850 the average size of the California farm was 4,465.6 acres. Today the average size is 316.7 acres, showing a great decrease, but at the same time demonstrating the fact that California is still a state of large farms.

These large farms have naturally demanded the employment of large forces in the way of machinery and motive power. The plows ran in gangs, and the gangs were pulled by teams of eight to twelve horses or mules.

Yet, with these big plows and big teams, the task of turning the soil was a laborious one, and the work performed of an unsatisfactory character. But no one troubled himself much about this so long as the land produced a big yield of wheat per acre and so long as wheat was high priced.

There came a time, however, when wheat raising became an unprofitable operation. That was when wheat fell in price and when the land, cropped to the cereal year after year with no rotation of crops or systems of fertilization, refused to yield as in the early days. In the 80's California was the leading wheat-producing state of the Union, but of late years it has fallen away down in the scale. In 1916 its wheat crop amounted to only 5,600,000 bushels.

But California is still a great grain-raising state, with barley the leading cereal cultivated. In 1916 its barley product amounted to 33,320,000 bushels, thus being first state in the Union in this crop.

So plowing is still one of the leading features of farm operations in the Golden State. But the tractor is revolutionizing this class of field work. The twelve-mule team is disappearing from her great grain fields, and the gas machine takes its place. Here, certainly, is a revolution in motive power.

Next, consider climatic and soil conditions and the change wrought in farm modus operandi.

Under the old plowing system the coming of the fall rains and the character of the winter and spring rains exerted a material influence upon plowing, sowing and cultivation. If the fall rains were late in coming, the plowing had to be deferred because the soil was so hard baked that it was entirely impracticable to attempt to turn it over. This delay would make winter plowing come in a bunch, and perhaps disarrange the whole season's work.

Then again, should the rains be excessive and the ground made too soft, plowing had to be deferred on account of too much moisture. But with the tractor as a propelling power there need be no delay, either by reason of no moisture or an excess of moisture. The work may go on rain or shine.

The farmer found still another soil condition—the existence of a plow hardpan, a bed made harder by each successive plowing year after year. Sometimes this hardpan lay five inches below the surface, sometimes three inches, so shallow had been the plowing from the date of the state's earliest farming.

This was a proposition that the mule team could not cope with. But the gas tractor plunges the plow well beneath it and rips it up regardless of thickness or density.

This deeper plowing also brings new and virgin soil to the surface and the crop yields are thereby increased, and in some cases doubled.

And this better control over his plowing lifts a heavy load from the shoulders of the farmer, not only making his daily labor easier but giving a better return from such labor.

The gas tractor is surely in demand in California. Manufacturers of the machine are springing up all over the state, yet some of the older concerns are from sixty to ninety days behind their orders.

Machines of many makes and sizes are being turned out, and a concentrated effort is being made to suit all kinds of farm, garden, orchard and vineyard conditions. The orchardist now has a machine with which he is enabled to plow up close to his trees without breaking a branch or barking a trunk. Even the vegetable and berry growers have their neat, trim little machines with which they may not only plow up their plots, but may plow and cultivate between hill and row.

A good dairy sire should be grown well from the day of his birth and not allowed to become stunted, as size is one of the important qualities for a dairy sire.

The Wisconsin Farmer

FAMILY CIRCLE TALKS
BY THE PUBLISHER

FARMERS ARE BUILDING NOW.

I PRINTED an article, on this page last week, suggesting the advisability of the farmer's building, now that farm product prices have risen so much higher than building material prices. The lumberman whom I quoted in that article expressed the belief that the farmer was not taking advantage of the exceptional opportunity as fully as he should; that the "build now" campaign was not, in fact, as yet fully under way. I did not take exception to what he said at the time, but I had my own personal opinion nevertheless. You cannot drive through the country, as I do, almost day after day, the entire year around, without being impressed by the fact that farmers are building new and modern homes in surprisingly large number. Old houses moved to the back of the new, modern, up-to-date structures, with all the conveniences and comforts; now and then three structures, typifying the three different stages of farm progress; these are sights which are to be seen in every part of the grain belt today. Farmers are learning that it pays, in dollars and cents, as well as in comfort and happiness, to build good homes and to enjoy good health.

This personal opinion of mine is borne out by the report which Mr. H. K. Jennings, secretary of the Federal Land Bank, of St. Paul, sends to me. This land bank serves the farmers of Wisconsin, Minnesota, North Dakota and Michigan. Mr. Jennings advises me that up to the first of October this bank had received applications from the farmers of these four states for loans in the sum of $15,896,700 and of that amount $7,423,600 had been approved. He adds this illuminating information:

It may be of interest to you to know that the purposes for which applications for loans are made can be classified as follows:
1.5 per cent to buy land.
3.3 per cent to buy equipment, fertilizer and live stock.
19.7 per cent for buildings and improvements.
75.5 per cent to pay debts.

Here we have the farmers of four of the most typically agricultural states of the Union spending one-fifth of the money they raise by farm-mortgage loans for the laudable purpose of erecting new homes and outbuildings and improving the old ones. This simply means that in the few months the new federal loan law has been in operation the farmers of Wisconsin, Minnesota, North Dakota and Michigan have spent something like $3,000,000 for new buildings out of the amount Uncle Sam loaned them, in addition to the many more millions spent for the same purpose out of the proceeds of this year's crops, and of loans made through other sources.

I believe the farmer is just as quick to see his opportunity as anybody, and that he is building today to a greater extent than any other man. I believe Mr. Jennings' report confirms my opinion. But I still want to hear from my readers who either built this past year or are contemplating building. Did you find that building materials had advanced as much as farm products; are you glad that you built; do you consider it a good investment? There are a hundred and one questions I should like to ask, the answers to which would be interesting to us all. Will you write me, so that we can discuss this subject during the winter months?

LOOSENING THE FARM PURSE STRINGS.

THE splendid manner in which the farmers of the grain belt are responding to the call for funds to carry on the war and to relieve suffering, both at home and on the firing line, is a matter of the greatest pride and joy to me. No other class of people is responding so liberally or so unanimously. The heart of the country is being touched as never before, while purse strings are being loosened in such a way as to prove for all time the patriotism and the generosity of those who till the soil for a livelihood.

Not only are the men and women who read my words, and their brothers and sisters throughout the entire Middle West, buying Liberty Bonds in large numbers, but they are contributing to the Red Cross, to the Y. M. C. A., and to the other worthy relief organizations in magnificent manner. I have received reports this week of rural communities where the farmers have met and have voluntarily decided to buy Liberty Bonds to the extent of $2 for every acre of their land holdings. This means that a man who farms 100 acres pledges himself to take $200 worth of Liberty Bonds, and so on. The campaign is being systematized, with splendid results.

Early in the great war our Canadian cousins on the farm set us a good example by establishing patriotic acres, the returns from which were given to the government. Thus, thousands of acres of wheat and oats were donated to the government to feed the Dominion soldiers across the seas. I am proud, indeed, to be able to report that grain belt farmers, in large number, have adapted this idea to the present needs and are contributing generously of their products, sometimes giving outright to the needy, other times contributing to Red Cross auctions and to community sales, the entire proceeds going to give the soldiers in the trenches some extra comforts or to take care of the needy whom the soldiers left behind.

I cannot tell of all these incidents, they are too numerous. But from a mass of letters showing the generosity of the farmer in the present crisis I am going to print one this week, written to me by my good and patriotic friend, Mr. A. J. Banks, of Montour, Iowa, proprietor of Columbine Stock Farm, as follows:

Dear Mr. Pierce:—The local branch of the Red Cross at Montour, on October 13th, demonstrated what a small rural community can do in the way of loyalty, when everybody works with a will to win. The farmers of the township and the residents of the town were solicited to contribute anything that would sell, the proceeds of the auction sale to go to the Red Cross. Their response was way beyond all expectations. The farmers brought in and donated calves, pigs, geese, ducks and chickens; bags of wheat, corn, oats, rye, barley and clover seed; potatoes, apples, grapes, plums, nuts and vegetables of all kinds; cord wood, fence posts and loads of cobs. The business men of the town donated liberally of goods from their stores; professional men put up their services; day laborers their work. The ladies were not to be outdone by the men, so they donated boxes of canned fruit, cakes galore, pies by the dozen and baskets of home-cooked stuff; also rugs, articles of clothing and fancy work. But the most prominent feature was the fact that almost every one of the 130 farmers of the township brought in from ten ears to a bushel of seed corn. All these things were auctioned off, the bidding starting at 2 o'clock and continuing until 5:30. The bidding showed an intense patriotic spirit; intrinsic value was not considered. The total receipts amounted to $500, which includes money contributions and the proceeds of the dinner which was served at noon.

Mr. Banks was too modest to state it, but I learned the fact from other sources; his good wife is secretary of the local chapter of the Red Cross and is entitled to much of the credit for the magnificent success of the affair. I believe in giving credit where it belongs.

Could anything be finer or more inspiring than this spectacle of a whole township uniting in generosity and philanthropy? Will it not bring the people closer together than ever, uniting town and country folk in sympathy and spirit as nothing has ever succeeded in doing before? It was magnificent; it warms the heart to hear of such a thing. I am proud, indeed, that it is my privilege to record it here, where we talk over so many things and come so close together in fellowship and friendly communion.

THE NEW INCOME TAX.

I WANT to call my readers' attention to the fact that the income tax law has been radically changed. Every married man who has an income, during 1917, in excess of $2,000, and every single man who has an income above $1,000, will be obliged to make a report to the government and pay a tax next spring.

This matter is highly important to farmers, not only because it is a new law, by means of which Uncle Sam proposes to raise a considerable part of the money he is spending for war, but likewise because of the fact that all too many farmers have failed or neglected to make a proper income tax report in the past, and the government is now diligently engaged in checking up on them and assessing penalties which would have been saved had the tax been paid when it was due. There are several points about the law which I want to explain, and it may be the means of saving money if you will read carefully what I have to say.

To begin with, it is the duty of the farmer (as well as the town and city man) to hunt up the internal revenue collector and report his income for the year. No man is exempt from paying this tax because the tax collector does not come after him. Because a farmer does not receive the proper income tax blanks from the government and is not dunned for his tax is no excuse for his not reporting and not paying. Therefore, every single man who makes above $1,000 this year and every married man who makes above $2,000 must report his income to the internal revenue collector for his district. If he fails to do so the government can, and in time will, assess a penalty which will materially increase the amount of the tax.

In the second place, those who have paid income tax in the past will find their taxes largely increased as a result of the new law.

Suppose a farmer, shortly after the close of the present year, sits down of an evening to figure out his income. It is sometimes difficult to arrive at this exactly, but the law requires the farmer to do it to the best of his ability, swearing to the truthfulness of his report. Let us assume that the books which he keeps, or the mental calculations which he makes, show that he has made $5,000 during the year, from grain and live stock sold, from interest on notes or mortgages which he may hold, and so on. Now, under the new law, he is entitled to deduct from this sum (in addition to the expense items for seed, repairs for machinery, and so on, and certain taxes, which he has deducted heretofore) $200 for each dependent child, under 18 years of age. Let us assume that the deductions for expenses, taxes and so on are $500 and that there are two children; here is a total deduction of $900, leaving $4,100 upon which taxes must be paid to the government.

There is due, first, the normal tax of 2 per cent on all above the $4,000 minimum which has prevailed for the past two years, in this case amounting to $2. There is due, second, a special war tax of 2 per cent on all above $2,000, in this case amounting to $42. The two sums added together make the total tax for the year $44. This sum must be paid to the collector of internal revenue by June 30th next year, or a penalty will be added, this penalty increasing with the length of time the tax remains unpaid.

I hope I have made myself clear. The farmer is being given a bad name in many localities because he has failed or neglected to attend to this income tax matter in the past. Special deputies are spending all their time checking up farmers' incomes and compelling payment, with the result that newspapers which continually belittle the farmer are printing the news broadcast, as though the farmers were trying to cheat the government and were disloyal in a time of financial need. You and I know this is not the case, but it is incumbent upon us all to learn the details of the law and abide by it strictly. Therefore, let me repeat: Immediately after the close of the year apply to the internal revenue collector of your district and secure the proper blanks; file your report by March 31st and pay your tax by June 30th. Otherwise you will have a penalty to pay, in addition to your tax, and you will be pilloried as a "slacker" by newspapers which go out of their way to picture the farmer in the worst possible light.

A BASE LIBEL ON THE FARMER.

IT is not often that I become literally too mad for words. I long ago learned that the man who best controls his temper, who keeps his voice steady, and who maintains absolute control over himself is almost sure to win in an argument. But, of course, there is a limit beyond which aggravation cannot go with impunity. That limit, in my case, is reached when I read what a Chicago banker, E. D. Hulbert, president of the Merchants' Loan and Trust Company, has to say of the farmer's alleged attitude in the present crisis. Let me print what Mr. Hulbert is quoted as saying, not because it is worth the space I give it, but simply to show how some people go out of their way to libel and malign the farmer:

The one weak spot in the situation is the attitude of farmers. They will neither buy Liberty Bonds, pay taxes, sell their produce, or fight. I have asked many out-of-town bankers who have called here about farmers paying taxes, and I have learned of but one instance in which a farmer has paid an income tax. They have profited throughout the entire period of the war, but are unwilling to help the government in any of the four ways mentioned.

The controller of the currency has estimated the gross income of the United States to be about $40-

(Concluded on page 6.)

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES.

BY JAMES M. PIERCE

JAMES ATKINSON, EDITOR-IN-CHIEF

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter.

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address THE WISCONSIN FARMER, Madison, Wisconsin

In Calumet County.

The Wisconsin Farmer recently noted the organization of the Holstein Breeders' Association in Calumet county, the work being directed by Mr. J. J. Garland, emergency demonstration agent. On November 3d the Guernsey breeders of the same county will be organized and, while they are not so large in numbers, it is expected that a good organization can be perfected. Mr. Garland writes us that he is enjoying his work very much in Calumet county and that he finds it an ideal dairy country, a fact which needs no proof to those who have traveled through the county. Mr. Garland states some of the finest farm land in Wisconsin is situated in Calumet county. The assessed valuation of farms in the county is higher than any county in the state except Milwaukee, where, of course, it is influenced to a large extent by being close to a large city. The majority of cows kept in Calumet county are the Holstein-Friesian breed. Unfortunately up to this time only about one farm out of ten has a pure-bred sire. Here is an opportunity for plenty of missionary work and Mr. Garland and the associated breeders of the county are doing their level best to improve the situation. The work this winter in Calumet county will be conducted along the lines of interesting more dairymen in cow-testing associations and improvement of herds. Splendid work has been done in assisting the farmers of the county to lay aside their seed corn and fortunately the seed-corn situation is better in Calumet county than in many other sections of the state.

Calumet county farmers have not been very enthusiastic on the subject of county agents, but we feel that such a man as Mr. Garland may be able to prove the value of this system even in a fine farming neighborhood like Calumet county. We believe that the farmers of Calumet county will find it greatly to their advantage to coöperate with Mr. Garland in this work.

Facts About Meat Supplies and Prices.

Some interesting facts are presented by Swift & Company, packers, to questions submitted to them by the federal trades commission relating to meat supplies and prices. To begin with, it is pointed out that the wholesale price of meat has not risen in the same ratio as other commodities. Cattle—good, choice steers—were 25.6 per cent higher in June, 1917, than they were in July, 1916, while hogs were 59.8 per cent higher. Wheat went up 130 per cent in the same time, corn 112 per cent, potatoes 241 per cent and coal 172 per cent. Relatively, therefore, meats have been on a lower price basis than nearly all other commodities, this being due, according to Swift & Company, to the large supply available. That the prices of meat did rise to the extent mentioned was due to the unprecedented demand for meat products and to foreign buying. It is pointed out that those who ordinarily use meat sparingly have been earning so much money in the industries boomed by the war that they are buying meat more plentifully now than ever before and this in spite of the relatively higher prices that have to be paid for it. In 1914 the United States exported 140,000,000 pounds of beef and beef products, while in 1916 it amounted to 444,000,000 pounds. During the same time fresh pork exported increased from less than 3,000,000 pounds to 63,000,000 pounds, while cured pork products increased from 405,000,000 pounds to 920,000,000 pounds.

Referring now to the trade forces at work to prevent a rise in meat values corresponding to those in other products, this company finds that as a matter of fact there has been a great increase in the supply. Going back to 1911 the records show that the meat production of the United States in round numbers amounted to 20,000,000,000 pounds. The next year it dropped off three-quarters of a billion and in 1913 it increased slightly. The following year, that is, 1914, it dropped nearly 2,000,000,000 pounds compared with 1911, whereas in 1915 there was an increase of nearly half a billion pounds. Coming now to 1916 we find that the meat production of the United States was 24 1-3 billion pounds. These figures indicate that there was a larger per capita supply of meats in the United States in 1916 than ever before, and, furthermore, the actual number of live animals on the farms in 1917 showed an appreciable increase. These facts lead to the conclusion that increased production accounts for the failure of meat prices to advance as the prices of other commodities in general.

Facts were furnished the federal trades commission by Swift & Company to prove that the packer's margin is small, the claim being made that live stock at all times is worth to the packer only as much as it can be sold for after it has been converted into dressed meat and by-products. In 1912 Swift & Company made 70 cents per head net profit on cattle; in 1913, 77 cents; in 1914, $1.17; in 1915, $1.64, and in 1916, $1.65 per head. Last year the profit on sheep was 20 cents per head, while on hogs it amounted to 97 cents per head. For a five-year period the company's net profit on hogs was 58.5 cents.

Attention is called to the fact that the higher profits obtained by the packers in 1916 has been due to the rapidly advancing prices between the time of slaughter of animals and the time of selling meats. It is pointed out that when the tide turns and values begin to recede the effect on the profits will be just the opposite, that is, they will be reduced or turned into losses. This being the case, the additional profits that might be available for distribution among shareholders of the company are not distributed, but are carried as a reserve to take up possible losses in the future. It is stated most emphatically that the packer cannot control the demand for meats, nor does he have anything to say regarding the supply of live stock. Ninety per cent of fresh beef must be sold within two weeks from the time of slaughter, as it is simply chilled and not frozen. He knows what meat is worth at the time the animals are bought, but this is the only basis he has to go by. If a larger demand is anticipated than really exists the meat must be sold at a loss rather than to let it spoil. If the demand is greater than was anticipated, sufficient profit is obtained to absorb the losses when the demand falls off. On the whole, the packer's profit averages less than ½ cent a pound and this is given as a proof that prices are not manipulated so as to yield exorbitant profits. The record of the wholesale prices obtained for meats by the packer shows that the producer is paid approximately 90 per cent of the price received by the packer and from two-thirds to three-fourths of the final retail price.

Every man who has been in the business of stock raising for any considerable time knows that the curse of the whole business is the violent fluctuation in values, but, according to the statement made to the federal trades commission by this company, prices are based wholly upon the demand for meat products. There may be a big run on the Monday market and top prices paid, this to be followed by a smaller run on the Wednesday market and lower prices paid, due to the fact that, as claimed by packers, the high price paid on Monday, which must show up in the retail price, tends to cut down consumption, thus necessitating buying on a lower basis. In the past the packers have made little attempt to present to stockmen the real reason for violent fluctuations and doubtless they themselves are responsible for the prevailing notion that exists that the packer manipulates the market in order to make a big haul. It is a favorable sign of the times that the whole subject is brought out in the open and presented in such a way as to clear up the mystery regarding price fluctuations.

The Day of the Big Hog.

The constructive work of those pure-bred hog breeders who have been emphasizing the importance of scale is going to count in these critical times when there is such urgent demand for more animal fats and more meats. The national food administration is favoring the plan of making the 1917 pig crop heavier before marketing than has been the custom in the past. By adding anywhere from twenty-five to seventy-five pounds additional weight per head a market will be created for a great deal of corn and the supply of animal fats and meat products will be increased just to that extent. This matter is referred to in a communication from one of our subscribers, who, among other things, says:

> The peculiar conditions regarding hogs and corn, the first being rather short in number and the last promising to be very abundant, makes it apparent that it will be the most profitable thing hog feeders can do to try to make all the animals capable of large growth as big and as fat as possible.
>
> This will give the farmers a good place to use up considerably more corn than the ordinary plan of fattening their hogs, and very largely increase the total amount of pork for the world's teeming millions, both at home and abroad, who now stand greatly in need of it.
>
> Unless there is a government price set on both hogs and corn, establishing their values, as is the case with wheat, and such prices to a great extent so regulated regarding each other that they will be more equal in value when husking time arrives than present indications point, it is going to be the proper thing to do to feed the hogs abundantly and long, to secure the maximum of growth and fatness.
>
> This does not apply and it should not where a farmer's hogs are of the small-bone and quick-maturing breeds. Hogs of that class must be sold as soon as well fattened, no difference as to the lightness of weight.
>
> The big-boned and large-framed breeds now common can and should be fed to weigh from four to six hundred pounds, and it is desirable for all farmers possessing such stock to feed for great size and extra fatness.
>
> The real idea to be impressed upon the minds of hog feeders is to secure for the world's good enough of extra pork to make up for the shortage in the actual number of hogs the country is going to be able to put on the market.

It is fortunate, indeed, that pure-bred hog breeders have been doing effective work to pave the way for carrying out this particular program. A decade ago when the little, roly-poly hog was at the zenith of his popularity it would have been wasteful to attempt to greatly increase the weight of market hogs. They finished up around 250 or 275 pounds and after that gain would be too costly to justify putting it on. The modern hog is an entirely different proposition. He has stretch and he has bone enough to carry him to market under a heavy weight with no extra risk to run if an attempt is made to load him down with fifty or even a hundred pounds extra weight.

We sometimes fail to recognize the close connection between the pure-bred hog industry and pork production. However, as a breeder of grade hogs uses the pure-bred for crossing purposes, it follows naturally that the dominating pure-bred type will be the prevailing type among the grades.

Wintering Bees Under Wisconsin Conditions.

There are three ways of wintering bees and John Kneser, of Hails Corners, has tried all three of them with equal success. They are all good, but each one only when conditions are ripe for using that particular method.

The first important factor in the success of wintering bees is a good, strong colony. This can only originate when there is strong vitality in the queens from which the colony has come. At this time of the year, however, queens had better be left where they are, as the proper time for average beekeepers to attend to the queen end is during August. However, any beekeeper can, according to Mr. Kneser, see at a glance whether the colony is worth wintering or not. If upon removing the top of the hive no more than three frames are covered by bees it is a safe bet that it is not worth while wintering this colony unless another weak hive is added and the two consolidated.

"I winter my bees in three ways," said Mr. Kneser, "and for the most part I get them ready early the last weeks in October. The double-walled hives I keep out all winter in a protected place where no winds from the north and west can touch them. I leave with the hive between twenty and thirty pounds of honey for the bees to live on during the winter. There ought not to be much less than thirty pounds where the double-walled hives are left out all winter."

The double-walled hives are provided with two walls, the center of which is filled with tightly packed shavings. On top of the hives a burlap sack is placed and above it another sack filled with leaves or straw. The front is left open so that the bees can go out during the warm weather.

Single-walled hives can be kept in the cellar. The room may be the furnace room, but it must not be overheated. The best temperature for the bees ranges between 45 and 55 degrees. If the bees began to buzz in their quarters it is not a good sign. Dampness and drafts should not be allowed. Each hive should be provided with at least twenty pounds and preferably twenty-five pounds of honey. The single-walled hives are just what the name expresses—hives having only a single wall.

The last method of wintering bees, which is very successful and advisable where no cellar room is available, is the winter case method. The hive is simply placed in a box large enough to allow a space of three or four inches on each side and these spaces are filled with sawdust and leaves. The entire box is placed in a sheltered spot, possibly along a fence with cornstalks to protect the winter case from the north winds. An opening is left in front so that the bees can fly during the warm weather. To allow the bees to move about on top of the frames Mr. Kneser places a few sticks on top which hold up the burlap.

Mr. Kneser figures that 100 hives ought to produce $1,000 worth of product during a very good year. Beekeepers know, however, that the years when all hives will average that high are few and far between. There is a profitable side to the keeping of bees provided the marketing of the product and the care of the bees in general are properly attended to.

Nature's way is to dispose of the queen towards the end of August when she is killed by her hive and a new queen developed. Many beekeepers safeguard themselves from possible weak development of a colony through an inferior queen by taking away the queen and supplying the hive with one selected from an especially good strain.

These queens are from the best Italian strains known to beekeepers and are vigorous layers. The poor queen will stop laying early in the season, but the vigorous one continues until late in the fall. The following spring the old bees die off and the young ones take their place as producers. If now the queen stops laying early in the preceding year the death rate among the old ones will be heavier than the numbers of young bees developed. Thus the colony in the following fall will be weak and by next spring have really not enough workers to be called a colony.

Purchasing queens is the safest investment the general beekeeper can make. The average price of good queens ranges from 75 cents to several dollars. The South has developed a great many of the best queens available at present. It is a peculiar fact that, though trees, plants and crops of the South will not do well when transferred to northern states, with bees this is not the case. Southern queens

are very much in demand by northern beekeepers.

Mr. Kneser does not believe in planting any special crops for his bees from which to gather their honey. Buckwheat and alsike are very much preferred by the honey bee. Red clover is no good to the bees and Mr. Kneser believes that where conditions are not against alsike it would be a good thing to plant a seed mixture containing a good proportion of alsike. Likewise, where buckwheat can be used for chicken feed and other feed, the production of honey will be made easier for the bees when a field is planted to this crop. However, buckwheat honey being dark in color is rated as No. 2. For his purpose Mr. Kneser finds alsike and basswood honey mixed the most desirable and marketable product.

Senator Husting Killed.

United States Senator Paul O. Husting, of Mayville, Wisconsin, was accidentally shot, by his brother, while duck hunting near Rush Lake, Sunday, the 21st. According to the press dispatches, Senator Husting had sighted a flock of ducks and had called to his brother, Gustave, to shoot. The senator was in front, in the boat in which the two were located, and as his brother fired he arose, receiving the full charge of shot in his back. He was rushed to a near-by farmhouse and three physicians summoned, but death resulted in a short time, in the presence of his three brothers, E. A., Gustave and Peter.

Senator Husting was in his fifty-second year, having been born at Fond du Lac April 25, 1866. He attended the common schools of Fond du Lac and Dodge counties until his sixteenth year; then he worked in a general store, the postoffice, the railway postal service and then as a clerk in the office of the secretary of state at Madison. He entered the University of Wisconsin in 1895, passed the state bar examination and commenced the practice of law at Mayville. He was elected district attorney in 1902 and re-elected in 1904; in 1906 he was elected state senator from the thirteenth senatorial district and re-elected in 1908. In 1914 he was elected to the United States senate to succeed Isaac Stephenson.

Senator Husting was conceded to be one of the strong men of Wisconsin and in his death the state loses a faithful and efficient public servant. Governor Philipp will be called upon to appoint a senator to fill the vacancy until Senator Husting's successor can be elected.

Illinois Milk Production Costs.

Production figures are always interesting and, though the following two sets of data were gathered on farms in Illinois, conditions being so very similar they will be of interest to Wisconsin producers at this time. It is a mistake not to figure the cost of feedingstuffs at market price, no matter whether such grain or hay has been produced on the home farm or not. If they were to be purchased the market price has to be paid. The first set of figures signed "Dairyman" quotes silage somewhat high, but the value of this silage has been determined on the basis of mature corn. Wisconsin's corn this year, according to the crop reports issued by the state department of agriculture, is only 12 per cent normally matured and undamaged. The rest is either slightly damaged or very seriously so, besides being for the greater part mature. Silage from immature corn or immature and frozen corn, or frozen mature corn, has not the feeding value of undamaged, well-developed and mature corn silage. To make up for the deficiency in nutrients from poor silage it is necessary for the farmer to purchase additional concentrates which he must feed to the cows in order to maintain a maximum flow of milk. Thus the high price of first-class silage, while it cannot be applied to the immature silage, will nevertheless be represented in the feed bill under the caption of "additional concentrates" to make up for deficiency of nutrients in low-grade silage.

The second set of data was gathered on the farm of Governor Lowden, of Illinois, and has no doubt also attracted the attention of that official since its compilation. Illinois will do well to follow the course taken by Wisconsin dairymen in having a commission appointed to investigate the cost of production in their state. The man who owns cows knows the troubles of the dairyman.

Here are the figures:

Cost of production of 100 pounds of milk from a farm consisting of 150 acres. All fodder raised on the farm is sold off in milk. The average yield per cow for the year or 6,426 pounds produced for the year a total of 185,730 pounds. It takes two men 365 days at twelve hours per day to take care of these cattle, making a total of 8,760 hours. Average for every 100 pounds of milk produced is six and one-third hours at 16 cents per hour, making a total cost for labor of 70 cents per 100 pounds.

Amount of feed consumed per 100 pounds of milk: Corn, forty-four pounds at $56 per ton, it costing $1.23 per 100 pounds of milk. Ensilage. (Ensilage is based on seven tons of ensilage per acre. Seven tons of ensilage per acre will yield thirty-five bushels of corn, and at the rate that corn is selling now at $88 per ton the ensilage of the present time is named in the previous statement, $13.20.) Hay, fiifty pounds at $20 per ton, is 50 cents. Bedding, straw, thirty-nine pounds at $7.33 per ton is 13 cents for 100 pounds of milk.

Interest on money invested in cow, 10 cents per 100 pounds; insurance and tax on cow is 1 cent per 100 pounds; depreciation of cow 15½ cents per 100 pounds; barn rent, 7 1-6 cents per 100 pounds; keeping of bull, incidentals, lighting, medicine, veterinary, tools, heating water in winter, salt, etc., 6 cents per 100 pounds.

Total cost of producing 100 pounds of milk $4.14½.

Credits: Value of calf, 15½ cents per 100 pounds of milk; fertilizer, 3 cents, making a total of 18½ cents deducted from the $4.14½, leaving the total cost of milk $3.86 per 100 pounds.

Comparison of feeds on the first day of October, 1916 and 1917:

1916	1917
Corn, $28 ton.	Corn, $86 ton.
Bran, $23 ton.	Bran, $36 ton.
Gluten, $25 ton.	Gluten, $55 ton.
Oil meal, $32 ton.	Oil meal, $60 ton.
Hay, clover, $12 ton.	Hay, clover, $18 ton.
Alfalfa, $16 ton.	Alfalfa, $30 ton.
Sugar feed, $22 ton.	Sugar feed, $48 ton.
Cows, $90.	Cows, $140.
Labor, $28 month.	Labor, $40 month.
Land rent, $6.50.	Land rent, $8.

(Signed) Dairyman.

No one who will give careful study to these figures will argue that dairymen can produce milk at a profit at 1916 prices. But here is further evidence:

Prior to the breaking out of the war the dairy farmer for several years had from November to April received a price of about $2 per 100 for his milk. Since 1914 the price of things that cows eat have on the average more than doubled.

The average cow will give not to exceed 5,840 pounds of milk in a year, or sixteen pounds per day. To produce this milk she will consume in the wintertime approximately the following feeds per day: Thirty-three and one-third pounds of ensilage at $8 per ton equals 13.4 cents; alfalfa hay, twelve pounds at $25 per ton equals 15 cents; a ration of grain and mill feed, eight pounds at $46 per ton equals 18.4 cents. To take care of a cow will require thirty minutes of labor per day, which at 25 cents per hour equals 12½ cents, or a total feed and labor cost of 59.3 cents for sixteen pounds of milk, or $3.706 per 100 pounds, and 12½ cents per 100 pounds for delivery from farm to station, make $3.83.

Add 10 per cent for the farmer's profit and it makes the price $4.21 per hundred, and yet for asking $4 per hundred for milk for the coming five months we dairy farmers are called profiteers, threatened with jail and fines—all because we have done what every other line of business has done—namely, tried to advance the price of our product to a point that would at least cover the cost of our raw material.

The dairy farmer is neither a profiteer nor a man who desires to take advantage of war conditions. We simply ask a living price with a small profit, and until some of our accusers can prove the above figures are inaccurate or unfair we are going to continue to believe that $4 per 100 for the next five months is a fair price for the producer to receive for his milk.

J. T. Williams, Sterling, Ill.

It is apparent that the dairyman need have no fear of fair investigation of milk production costs.

HELP UNCLE SAM HELP YOU.

Fur-Bearers as Food Animals.

The fur season is here and it promises to be a profitable one for those who make a business of trapping these animals through the winter months. Thousands of farm boys who find trapping a delightful sport as well as a means of earning some money for themselves will be pleased to learn that reports indicate there will be a good crop of fur-bearers this season and that prices will also be good.

During the next six or eight weeks The Wisconsin Farmer will publish a number of articles by practical trappers that should prove interesting and helpful to those who have not had much experience in catching the various fur-bearers common to this section of country, and to which we invite the special attention of our boy readers.

While the flesh of several of the common fur-bearers has been used to some extent for many years, and by some considered a luxury, great quantities of valuable food is annually allowed to go to waste by throwing away the bodies after the pelts have been removed. Because of the present high price of meats and of the need for conserving every bit of food possible this should no longer be done. The muskrat, raccoon and opossum are quite commonly used for food, as are also other species, and it is to be hoped that every pound of flesh of these animals that are caught primarily for their pelts will be conserved this year. If remunerative markets cannot be found for the flesh it should be saved for home and local consumption and take the place to a considerable extent of pork and beef. The boy who catches too many of these animals to utilize them while fresh should urge his mother to can the meat for future use. It is as easy to can muskrat and raccoon as it is to can chicken and just as practicable. The utilization of the flesh for food will bring an additional profit to the trapper and at the same time give him an opportunity to be of service to his country by adding to the food supply of the nation.

Following is a recipe for frying muskrat as published by the United States Department of Agriculture in Farmers' Bulletin 396:

Wash the muskrat thoroughly and cut in quarters. Let it lie in salty water for an hour or more, then wash, dry with a cloth, and season. Dip the pieces in a prepared egg batter and dust them with flour or meal. Place the lard in a frying pan and let it get hot. Then put in the muskrat and fry very slowly for an hour. Prepare a gravy of milk, butter, flour and parsley and season it to taste. After it thickens pour it over the cooked muskrat.

Muskrat may also be roasted after first soaking in salty water to remove the gamy flavor which is objectionable to some people. In the publication referred to above there is also found a recipe for stewing the flesh of this animal, as follows:

Wash the meat thoroughly, cut it in pieces, and let it lie in salty water for an hour. Then wash again, put it in a saucepan, and season with butter, salt and pepper to taste. Let it simmer slowly and when nearly done put parsley and a little chopped onion into it. When entirely done thicken with a gravy of flour and water, as for stewed chicken.

Those who do not wish to use the flesh for home consumption in any way should correspond with fur dealers in regard to finding a market for it, concerning which they will be able to give helpful information. Ten years ago dressed muskrats retailed for 15 to 20 cents each on many eastern city markets, and, according to present prices of meats, they should bring considerably more nowadays.

A LAMP WITHOUT A WICK.

The Sunshine Safety Lamp Co., 311 Factory Bldg., Kansas City, Mo., has a new portable gasoline lamp which gives the most powerful home light in the world—a blessing to every home not equipped with gas or electricity. 300 candle power at 1 cent per night. This remarkable lamp has no wick and no chimney, is absolutely safe and gives such universal satisfaction they are sending it on Free Trial. They want one person in each locality to whom they can refer new customers. Take advantage of their free trial offer. Agents wanted. Write them today.—Adv.

AMERICAN Portable Lamps

WHY be satisfied with dim, smoky and dangerous oil lamps when you can light your home brilliantly with an American Portable Lamp at no greater cost 400 to 600 candle power light for ⅕ to ½ cent per hour Ornamental, simple and absolutely safe

AMERICAN DARK CHASER

the ideal lantern Wind and storm proof Built to stand the hard knocks No glass chimneys to break. Safe anywhere 400 candle power Ask your dealer about American Portables and lanterns or write for attractive literature

FAMILY CIRCLE TALKS BY THE PUBLISHER

(Continued from page 3.)

000,000,000. Of this he estimates farm produce and animals to bring a gross return of about $17,000,000,000. The farmers, according to this estimate, are getting 42½ per cent of the country's income and giving nothing out of it. It is left for the government to raise taxes and sell its bonds to the remaining 57½ per cent, while the class which as a whole has profited most escapes any burden.

The farmer has been pampered by politicians until he seems to feel he is in a preferred class, and, as I said, he doesn't want to buy Liberty Bonds, he doesn't want to fight, and he avoids his income tax. It is about time the farmer should appreciate his position in the country and help do his part in a war as much for his benefit as for those who are putting up the money and doing the fighting for him.

It is hardly worth while answering such a libel, or giving facts to a man who would utter such a thing. But I feel that it would be wrong to let the matter go by completely scorned. I shall make my remarks brief, however.

I wonder what the eminent Mr. Hulbert will say to what Mr. A. J. Banks has to tell us today, in another column; how the rural community around Montour, Iowa (a town of 400 population), raised $500 in one day from the auction sale of produce contributed by farmers for the Red Cross work.

I wonder what Mr. Hulbert would say in regard to the action of the farmers of Washington county, Minnesota, who donated the products of an acre each (100 of them coming forward and offering to do it the very first day the matter was suggested) to the Red Cross.

I wonder what Mr. Hulbert would say in regard to the report I printed from my good friend, Mr. Frank Dunning, of Bedford, Iowa, a few weeks ago, showing that every farmer in a township covered by Mr. Dunning had contributed from $1 to $25 to the Red Cross, while one-fourth of another township contributed $369, all of the contributions, except two, being under $25.

I wonder what Mr. Hulbert would say to the fact that at the army cantonments here in the grain belt (at Des Moines, Rockford, Battle Creek and Riley), there are scores of thousands of farm boys who flocked to the colors without claiming the exemption which should have been granted them, drilling hours every day, eager to get into the trenches, and at the throat of kaiserism.

I wonder what Mr. Hulbert would say in reply to the hundreds of patriotic letters which come to me, week after week, from farm parents who put patriotism above even parental love and who offer their sons as living sacrifices on the altar of world-wide democracy.

I wonder what Mr. Hulbert would say if he knew that thousands of farmers had bought the first Liberty Bonds and that other thousands are buying the second Liberty Bonds today.

I wonder if Mr. Hulbert will ever be brought to realize that it is men like him who cause trouble and who are enemies to peace and prosperity and progress, simply because they pit class against class and draw unjust discriminating lines, without ever stopping to know whether they are right and just or not.

I wonder—oh, pshaw! the libel was not worth answering in the beginning, much less now. If I undertook to point out every place where Mr. Hulbert is wrong I would be busy until the grandchildren of the soldier boys now in trenches and camp were old and decrepit. It is a base, unfair, unjust, untruthful libel—so let it go at that.

THE CHIEF TROUBLE WITH ANONYMOUS LETTERS.

THERE is nothing that gives me greater pleasure than to be of service to my farmer readers. I feel that I am not doing my full duty, as a member of our family circle, unless I make every possible effort to help them with information, advice or anything that I may do to advance their interests. Especially do I enjoy the letters which the letter carrier brings to my desk by the score daily, with their interesting stories of deep human interest and their requests for this or that information or advice. It is only in this way that I can maintain the close personal touch with my readers which enables me to know what they are thinking and what they desire. I try to answer every such letter personally. Sometimes, when work is pressing especially hard, and the demands on my time and thoughts are too great for the limitations which human nature has imposed on me, it is necessary to delay reply, but sooner or later I intend to answer every such letter and to give my correspondents the best that I have to offer in their individual case.

Sometimes, however, my wishes in these matters are defeated through no fault of my own, when men or women writing me fail to sign their names. In most such instances they assume that I will answer their inquiries through the columns of my paper. Sometimes, however, their inquiries are received too late for the next issue, which means that there must be a delay of ten days before I can reply. Oftentimes the query is one in which they alone are interested and I cannot afford to give space in these columns to something of interest to only one out of tens of thousands of readers. In other cases the matter has already been answered in the paper and it is unfair to my other readers to occupy the space with a repetition of it. Again the question asked may require a much longer reply than I can afford to give space to, when there are so many other matters of importance and interest, of which I wish to treat. The result is that I am unable to render them the help I would enjoy giving if I knew whom to address.

An example of this lies before me in the form of a letter from Rock, Kansas. It deals with a matter on which I feel strongly and which I have discussed many times in these columns. But as I have other plans for continuing its discussion I do not care to go into it further at this time. However, I would be glad to write the author, giving him some personal information and advice, which might be of value. But, when I look for his name at the close, I find the letter signed "A Committee," and I am afraid that, efficient as are Uncle Sam's boys who handle the rural mail, they would find difficulty in delivering a letter so addressed.

There is no reason for anyone failing to sign their name to any letter they write me, provided they will mention the fact that they wish their name kept secret, if such is the case. An unsigned letter is always a disappointment—like reading a story up to the most important chapter, only to find that it is missing. In most offices anonymous communications receive short consideration and an early consignment to the nearest waste-paper basket.

I am sure the "Committee" at Rock, Kansas, and many others, who have signed themselves "A Friend" or "A Reader," have not thought of the matter in this light. I am not finding fault with them in any critical spirit, but merely suggesting that they can help *me* to help *them* if they will sign all future communications with their names and addresses, assured that I will guard their names and the contents of their letters in confidence, if they request it.

I want to hear from all my farmer readers; I want to keep in close touch with you; I want to know your problems and your viewpoint; for it is only in this way that I can realize my highest ambition of making my paper best serve your needs. So I wish you would always feel free to write me, knowing that if possible I will furnish you any information or advice desired, but realizing that to do so I must first know who you are and how to reach you.

CHRISTMAS BOXES FOR FARMER SOLDIERS.

I AM in receipt of a letter from the mother of a farm boy who is a member of Uncle Sam's army already in France. This mother is anxious to send her boy a Christmas box which shall contain all that he most needs and will most appreciate. She knows the things that he likes best to eat when at home, the things she always served him on his birthdays; such, for instance, as fried chicken, chocolate layer cake, stewed Jonathan apples, blackberry jam on thick slices of home-made bread, and so on. She knows, however, that it is impossible to send these good things from the farm to her son across the seas. She does me the honor to ask me what she should send; what I would send to my boy if he were fighting in the trenches over there.

I have put the question up to a number of soldiers, officers and men alike. Some of them have been abroad and know conditions through personal observation. Others realize what the situation will be when they reach there. They have suggested a splendid list of things for this particular farm mother's Christmas box. I believe their suggestions are so appropriate we can all afford to consider them. What is good for the farm boy in the army over in France is also good for the farm boy in the conscript army, the national guard, and all the branches of the service in this country. They will appreciate Christmas boxes from the old home as much as the farm boys across the seas. And while the home box for the boys who are likely to stay in camp for some time yet may contain perishables (such as home-cooked foods and fruit from the farm orchard) still this list, as I have compiled it from the suggestions of various army men, is good for all those who are planning a Christmas box for the soldiers anywhere. Here is the list:

Two or three pairs of socks; two or three large handkerchiefs; writing paper; envelopes and lead pencil; chocolate bar; can of vegetable soup; can of pork and beans or spaghetti; three or four packages of cigarettes; small box of cigars; chewing gum; peppermint; one pair leather shoestrings; one can of cocoa; candy; two or three small books, classics.

Some of these may seem frivolous, even undesirable, but I have compiled the list from the suggestions of many men. One of my farm correspondents took exception, a couple of weeks ago, to the sending of cigarettes to the soldiers. This is a matter for individual decision. So are the suggestions as to candy; if the boy who is to receive the Christmas box does not care for such things do not enclose them. Such articles as fruit cake (in cans), loaf sugar, seedless raisins or nuts may be substituted, according to the taste of the recipient. The important matter is to send him things that are useful and that he likes, proving that he has not been forgotten, that the folks back home, on the old farm, remember him and the gifts that make him happy.

One officer impressed upon me the fact that only small boxes should be sent, especially to the farm boys already in Europe or likely to be sent there soon; boxes not weighing more than three or four pounds. When the men are ordered to new quarters they cannot carry heavy boxes with them. Better a few well-selected things, which can be kept, used and enjoyed, rather than many things, which must be thrown away.

Christmas may seem like a mockery to some of us this year; Christ's birthday celebrated while the whole world is at war, but it is our duty not only to keep the home fires burning brightly for the boy whom we pray will come back to us, but also to cheer him up with every means at our command. Make Christmas as gladsome a day for the boys in trenches, camps and dugouts as our aching, bleeding hearts will permit us at a time when every hope and prayer is for early peace.

FALL IN THE GRAIN BELT.

FALL—and everywhere are sights and sounds of falling! The fall of leaves, silently sifting down through still air, or whisked from fast-baring branches by the winds that play fitfully through the painted woods. The fall of nuts, rattling down through the boughs to the stony bed of the brook below. The fall of golden ears, thumping against the throw-boards into the wagon boxes on many a hundred thousand prosperous farms. The fields are a dull gray monotone, through whose haze the distant shocks of corn look like the wigwams of departed spirits, come back from the happy hunting grounds to enjoy the Indian summer. The smell of smoke is pungent in the air, bringing back with a rush a hundred happy memories of childhood days and nights in bonfire time. In the woods the trees, which still retain their foliage, are all on dress parade, the hard maples aflame like beacon fires, against a green and gold background of elms, pines and oaks. The days are days of mellowness and the nights are nights of stars. The morning air has a nip and tang in it that sets that blood a-tingle and urges one on to the farm tasks that must be completed before "a wintry gray comes booming down the north wind, and the snow whisks and piles in mounds of whiteness, where the eddies come and go," as one of our grain-belt poets sang.

As the day wears on the kindly rays of the noon sun lend genial warmth and invite one to wander forth across the dry fields, or along the banks of the little stream, where the squirrels are as busy as bees, laying in their winter stores, while belated robins and flickers are bidding old haunts farewell for a six-months.

Nothing disturbs the still surface of the water, save now and then a fish, rising to seize an unlucky minnow, or a painted leaf, drifting down to meet its reflected image in a mirrored pool. From afar comes the cawing of a crow, while a solemn-visaged hoot-owl sits blearing and blinking in the beautiful autumn daylight. As the sun sinks to rest in a bed of scarlet, mauve and gold, behind the western hills, the moon and stars take up the watch and flood the earth with soft silvery light. A touch of frost creeps forth in the air again and the welcoming light of the fire indoors, with the odors of the evening meal, offer sure cheer and contentment at the end of a perfect day.

It is undoubtedly true, my friends, that the Lord might have made more perfect days and nights than those of fall on our grain-belt farms. But it is also just as undoubtedly true that He never did.

James M. Pierce

State Investigates Milk Production

Committee is Endeavoring to Get Information on the Cost of Producing Milk in Badger State This Year.

THE cost of producing 100 pounds of Wisconsin milk will be determined by a commission appointed by Governor Philipp last week after a conference with a committee representing the milk producers of southern Wisconsin. The dairymen have agreed to rest their case in the hands of this commission and abide by its findings plus a 10 per cent margin of profit as to the returns they are entitled to for their October milk.

MILK CANS ON A WISCONSIN DAIRY FARM.

The clamor of the public for action against the milk producers through the states of Indiana, Illinois and Wisconsin resulted in the action taken by various states against the milk producers' association and its members. On October 6th and 7th about 100 members and officers of the forty-four locals in Wisconsin affiliated with the Chicago Milk Producers' Association, were served with summons to appear at Racine on Friday, October 12th, to show why the state should not ask for an injunction "to restrain the organization from meeting, fixing prices and otherwise acting in an illegal manner in connection with the milk situation in Wisconsin." The milk producers at once appointed a committee, who waited on Governor Philipp in order to discuss the situation with him and determine if possible some other means of settling the controversy. The producers are certain that the figure asked, $3.42 for 100 pounds of milk testing 3.5 per cent fat, is not too high. It was not difficult, therefore, to obtain a vote for accepting this proposal of investigation. At the hearing at Racine the milk producers representing nearly all of the locals in the state voted unanimously to accept the price determined by the commission, plus a profit of 10 per cent for their October milk. The hearing conducted by the state's attorney was postponed until November 5th on the grounds that the producers had not sufficient time in which to prepare a defense. For their law talent the producers have engaged the firm of Kearney, Thompson & Myers, of Racine, with T. M. Kearney, Sr.; J. Page, of Elkhorn; Charles G. Riley, of Madison, and J. H. Pierce, of Janesville, to defend them.

The commission appointed by Governor Philipp was recently organized and consists of the following members: Dean H. L. Russell, Wisconsin College of Agriculture; Dean Davenport, Illinois College of Agriculture; Mayor T. W. Thiesen, Racine; Mayor J. A. Fathers, Janesville; Osmer B. Smith, Milwaukee, and five producers from the counties of Kenosha, Walworth, Waukesha, Racine and Rock. The farm members are: George Vincent, Kenosha county; George Elia, Racine county; Mortim Flack, Walworth county; L. House, Waukesha county; H. G. Bemis, Rock county. Another member of the commission is John Lefeber, Milwaukee, a milk producer.

At the first hearing the state's attorneys fought hard against a continuance of the case, but the point was decided against them. The state has been summoning a number of producers, both members of the association and non-members.

To all appearances Governor Philipp has the right view regarding the problem of milk production. While the country was never in greater need for a maximum output of milk, this case being pushed at this time can easily do more harm than good. Investigation will prove that the producers were not far from the exact cost when they estimated the price for October milk at $3.42. The volume of proof in favor of the dairymen is constantly growing. College men and bookkeeping producers have all come to the same conclusion, viz.: That milk costs approximately $3.50 per 100 pounds when a profit in favor of the farmer is figured. Jeopardizing our output of milk by trying to intimidate producers at this time seems to be a serious blunder on the part of the officials responsible for the investigation. The danger is that permanent harm may come to the dairy industry. Organization seems to have been the only effective weapon producers have been able to get hold of. The danger lies in the fact that there is such a good market at this time for dairy cows sold as beef. While we cannot agree that it is profitable or right for dairymen to sell their cows for beef during this war crisis, at the same time the temptation is very great if they can't be assured a reasonable price for milk which is produced. In any event milk production which should be increased will probably be decreased and the laws of supply and demand will settle forever the question of cheap milk.

Frank T. Holt, of Pleasant Prairie, Wisconsin, president of the Chicago Milk Producers' Association, has been a busy man since the start of the trouble. He has been asked to be at Chicago, Milwaukee and Madison and a dozen other places all at once. However, he has in some miraculous way managed to attend all conferences where his presence was necessary and is succeeding in keeping up the pace. Mr. Holt's popularity with the members was particularly noticeable at Racine, where he was given an ovation upon entering the court room. To talk with Mr. Holt for a few hours would convince many of those now eager to provide trouble for the dairymen that milk producers, the daily papers call them milk barons, are human beings with no desire to make living impossible for the wage earner or the city men and their families. It has Mr. Holt's opinion that any fair investigation, no matter by whom conducted, would prove that the prices asked for milk by the producers would agree very favorably with the $3.42 rate.

On the Wisconsin side, therefore, the milk situation has apparently quieted down. The producers will await the decision of the investigation committee and the state is content with giving the producers ample opportunity to prepare an adequate defense on the important action which would follow, should the state be successful in securing an injunction against the producers' association.

Meanwhile the consumer in most of the cities is paying from 10 to 11 cents per quart of milk, and in others 13 and 14 cents, with no opportunity of receiving a discount on the advanced prices should the price for October be fixed at $3 per 100 or $2.50. But the farmer must content himself with waiting for his money until the commission reports. It seems as though the consumer in the cities ought also to be benefited in proportion to the reduction that might occur. To date the dealers in Wisconsin have not been asked to reduce their prices, but everything in due time, perhaps some day the consumer will see a whole lot of things which at present he knows little or nothing of.

Quality Kept Up — Indanthrene Colors

T. G. Mandt Farm Wagons

Strong Enough for Heaviest Loads on Roughest Roads

Quality timber and steel, special patented features in design, and high class workmanship combine to make the T. G. Mandt Wagon dependable for years of satisfactory service.

Good After 20 Years

A. W. Farrer, of Davey, Neb., writes: "My T. G. Mandt Wagon is as good today as it was when bought 20 years ago, as far as carrying capacity is concerned. The Mandt is, in my opinion, the best wagon on the market."

Cast Skein Steel Axle

is one of the patented features which commend the Mandt above other wagons. It combines the strength of the steel axle with the easy running qualities and light up-keep cost of the cast skein. Not only are the axles of steel, but Mandt wagons are steel trussed and braced throughout—the most thoroughly ironed wagons on the market—will carry heavier loads, run easier and last longer than other wagons. All wood parts are made of thoroughly seasoned oak and hickory. Wheels and gears are dipped in hot linseed oil before being ironed, then covered with two coats of the best paint.

Ask your Moline Dealer about the Genuine T. G. Mandt Wagon, or write us for Illustrated Literature

Tanning Department of Cedar Rapids Hide & Fur Co.

Iowa's Largest Hide, Fur and Wool Dealers.

You will realize more money for your hides and furs from us than elsewhere, as you are selling direct to tannery, thereby saving the middleman's profit. Our tanning of all kinds of hides and furs and manufacturing of coats, robes, rugs and mittens cannot be equaled. Send for our illustrated catalog on tanning and price list on hides and furs. Ship hides and furs for sale to Cedar Rapids Hide and Fur Co., and hides and furs for tanning to Cedar Rapids Tanning Co., of Cedar Rapids, Iowa.

(Cedar Rapids' only tannery.)

Be at Cain's October 30th.

THE last Duroc Jersey sale to be held in the Northwest this fall will be at Skyberg, Minn., October 30th. On that date J. J. Cain (Futurity Cain) will sell around 40 head of spring boars and gilts and the feature of this sale will be the boars and gilts sired by the $2,500 boar, Giant Invincible, that Mr. Cain sold to Jake Waltemeyer. Try to get a gilt by this boar to grow out and keep in your herd. This breeding and reputation is good property. If you want a boar, you can get one in this sale that will please you. If you can't attend this sale, send your bid to T. P. Shreve, who will be at the sale in the interest of The Wisconsin Farmer. He would like to see some Giant Invincible stuff go to Wisconsin and will take care of your business in an honorable manner. Send mail in care of Mr Cain.—Adv.

When writing to advertisers kindly mention The Wisconsin Farmer.

UPPER WISCONSIN

Why Wisconsin Farmers Should Raise Sheep.

To the Editor:—In the first place Wisconsin is one of the most patriotic states in the Union. But we could give more aid if more sheep were raised. We need all the wool that we can get so that Uncle Sam can clothe our soldier boys in good warm, woolen clothing. This will help them to better stand all weather conditions to which they will be subjected.

Secondly, from the profit standpoint there is no animal that can outdo the sheep. They will help to increase the fertility of the soil. They can be kept on pasture that other stock will not eat. With wool from fifty cents to one dollar per pound and the high price of lambs at fifteen to twenty cents per pound it is certainly an easy way of getting money. I think if there were more sheep kept on the farms there would be less sending home to "Dad" for money.

Third, especially in upper Wisconsin they should be raised. Good cut-over land can be bought from fifteen to twenty dollars per acre; rutabagas and carrots can be raised to perfection, yielding six hundred to one thousand bushels per acre. Clover will yield from three to five tons per acre. With a very little grain this will make an excellent winter ration, while in the summer they will graze and help their owner develop this new fertile land. I believe there is no better opportunity for the young man of today than to raise sheep and open up a farm in upper Wisconsin.

A. J. Mahr & Son.

Chippewa county, Wis.

Taylor County Plowing Contest.

The annual Taylor county plowing contest was held September 21st at Westboro. This contest was inaugurated by County Agent R. A. Kolb, Mr Kolb conceived the idea that the contest would get the good plowing men of the county together and in the actual field operation these farmers would learn a great deal from each other. There were about 1,400 people in attendance at the contest this fall. The Medford band furnished music. Professor Galpin, of Medford, delivered an address on the value of farmers' clubs. There were eight contestants plowing in a field of old sod somewhat rough with more or less stone. Winners of the prizes were as follows: First, R. H. Aitken; second, Joseph Imbach; third, Chas. Kuchenbecker; fourth, Gunder Nelson.

The winner of first prize was given a bull, donated by the banks of Taylor county. The second prize winner received a sulky plow, donated by the people of Westboro, and the third a Tamworth boar, donated by Mr. Kolb. The fourth prize winner received a feed cutter.

Stock Shipping From Rusk County.

A carload of mixed stock shipped by the Ladysmith Shipping Association netted $2,027.09. There were thirty-five head of cattle, averaging 772 pounds, and they brought $6.83 per hundredweight. Included in the shipment were five small pigs, averaging 116 pounds, which sold for $17.25 per hundredweight. There are now about 150 members in the shipping association.

Snow in Rusk County.

On Tuesday, October 9th, there was a light fall of snow at Ladysmith, Rusk county. Then on Friday of the same week the thermometer was as low as 24 degrees above zero. Snow also fell in portions of upper Wisconsin on October 11th and 12th. Reports from potato fields not dug indicate the freeze was not serious enough to injure the crop. In the year 1916 snow came with a general storm on October 19th. Two years ago this same section was visited by snow on October 2d.

Harvest Season Nearly Finished.

Principal Crops in Wisconsin Have Been Gathered—Small Grains, Hay and Root Crops Yielded Well—Corn Suffered From Frost.

WISCONSIN.

Adams County.—Owing to late maturity of corn crop and extreme earliness of killing frost, the corn is knocked out of commission in this locality. Potato digging is begun and while the quality is very good the yield is disappointing, running from twenty-five to 100 bushels to the acre. Threshing is nearly completed with oats yielding about forty to fifty bushels per acre and rye about fifteen. Fall pasturage is good. Amount of stock on feed this winter will be small. A small acreage of winter rye has been sown.—W. B. Barnes.

Buffalo County.—The frost has done considerable damage in this locality; especially to corn and garden truck. The corn is very soft and isn't fit to be cribbed, as it will mold. Most people are letting the hogs run at large and some have cut it for shredding. Some seed has been picked of the earliest kind, but is not dented as it should be. Plowing is well under way and the winter wheat has been planted. Roads are very rough and muddy since the rain. Potatoes are most all dug and the yield is about normal.—J. W.

Clark County.—With few exceptions silos are filled. All corn was badly frozen, but many fields were well enough along to make good silage. Very little corn matured. The yield of hay will average about 90 per cent of a normal crop; oats about forty bushels to the acre; wheat and barley about 87 per cent of normal and potatoes above normal and of excellent quality. Herds are being held at original number or being increased in spite of high prices for feeding stuffs. Indications are that most farmers will depend upon their own grain largely for feeding purposes.—Louis Buddenhagen.

Crawford County.—Some corn was harvested before the recent frosts, but fully 75 per cent was frosted. Most of the crop will be soft. Silos are still being filled. Potatoes are yielding well. More buckwheat was grown than in other years and is a fine crop. The pig crop is light and beef cattle scarce. Cows are in demand at fair prices. Tobacco was a big crop, but hail and early frost did great damage to it. As a rule, farmers have had a good year and are ready to buy liberty bonds.—A. M. Laird.

Dane County.—All corn was frozen here October 5th. There was no ripe corn. People at once went to filling silos and cutting corn. Beans were cut 25 per cent. Potatoes also were all frozen hard. They were not fully grown, but the crop will be a fair one. Digging will commence as soon as the potatoes do not peel. Threshing is in full blast. The yield is only fair. Prices are good here.—John Azur.

Dunn County.—The corn crop in this county met with killing frost before it was advanced far enough for seed ears. That is the result on at least 95 per cent of the farms. Those who have corn developed enough for seed should, therefore, diligently save it. Thanks to the silo, this early killing of the crop has resulted in its saving to the extent that it will make fair silage. The few without silos have cut the crop and are feeding it whole to live stock for beef prospect. Quite a lot of feeding animals are being picked up for this purpose.—J. D. Millar.

Iowa County.—The corn crop was damaged to a great extent in this locality by the early frost which occurred about three weeks ago. The corn that was frozen at this time will make no corn to crib and people that had silos put it in them. Some fields on very high ground did not freeze at this time and there will probably be some corn to crib in this. The corn crop will be very light. I would think not more than one-third of what it should be. Potatoes are a good average crop. Hay was a good crop, yielding around two tons to the acre. Oats went about fifty bushels, and barley forty or forty-five. I think as a rule there will be more cattle wintered in this section than last year.—J. M. Blotz.

Juneau County.—About 5 per cent of the corn is out of danger. Ninety-five per cent of the corn was damaged by frost. All it was fit for was for silage and it was mostly all used for filling silos. The hay went about one and one-half tons to the acre; oats, forty bushels per acre; wheat, 25 bushels; barley, thirty-six bushels, and rye, ten bushels. Potatoes will go about 100 bushels. Live stock is normal in number and condition and will be fed principally on home-grown feeds.—C. E. Haskins.

Lincoln County.—Corn in this locality was almost a failure. In normal years it is raised principally for silos. The early frost this year made corn almost useless even for silos. All small grains were excellent in quality except barley, which was injured to some extent by hot winds. Oats averaged about forty bushels per acre; rye thirty bushels per acre; barley, twenty-five bushels per acre and spring wheat twenty to twenty-five bushels per acre. About the usual number of live stock are being kept. All are in healthy condition. Potatoes will average 125 bushels per acre.—G. A. Patterson.

Marquette County.—The corn crops in our section are about 50 per cent injured. The yield of potatoes is excellent and those that were not dug were damaged about 25 per cent by the frost. The number of stock is normal. The condition of stock is not normal on account of being cold and wet. The feeding operations for the winter will be normal.—Emil Dein.

Manitowoc County.—Silo filling is the order of the day. The corn crop for silage and fodder was not as good as last year and none of the corn ripened this year on account of the unfavorable season. Hay has been about a normal crop. The same is true of rye, peas, oats and wheat, while barley was below normal. Potatoes are a bumper crop both as to quantity and quality. Live stock looks fine, but owing to the high price of feeds, feeding operations will not be carried on extensively. Rye and winter wheat are up and doing well, despite unfavorable weather. We had no frost here until October 6th and have had several since. Threshing is not all done yet. Farmers are also harvesting their second crop of clover (when weather allows) of which there is a large acreage.—Edward E. Straka.

Oneida County.—The farmers are busy digging potatoes. The acreage was larger than usual and the yield was good. The prospects seem to be good for a big price again. All the small grain is threshed and the yield was normal. The second crop of clover is all put up. It has been awful cold here the past few weeks and it made it rather bad for those who were digging potatoes, as labor is scarce. Most of the farmers have been working with small crews. A late fall is hoped for so as to give everyone a chance to get the fall plowing done. The pastures are good and the cows are going down in the flow of milk.—Chas. H. Jewell.

Outagamie County.—The condition of the corn crop in this section is poor, as it has practically all been frozen quite early. Very small percentage of it is matured for husking. Practically 75 per cent of it is being put in silos. Very small percentage is standing in fields. Mostly all cut corn is very poor quality and not fit for market. Hay crop was very good in this locality, being of very choice quality from two to two and one-half tons per acre. Small grains have turned out very satisfactory. Barley ran from thirty to forty bushels; oats, fifty, sixty-five and seventy-five bushels per acre and of very good quality. Potatoes are very good quality and about 70 per cent of a crop. Live stock about normal in number. Condition very good in regard to health. Not much feeding in this locality.—Harry Lepplie.

Sawyer County.—Throughout this vicinity the corn crop was a total failure as far as grain is concerned and only a part of it was matured enough for good silage. Some fields have not been worth cutting even for silage. Small grains are yielding good. Oats have been running from fifty to sixty

(Concluded on page 19.)

HIDES, FURS, TRAPS, ETC.

Big Money in Trapping!

Big Season Ahead Get ready now! Trapping pays big, and we want all the furs we can get this season. Here's your chance to make good money this fall and winter. "Biggs at K. C." will tell you how to trap successfully and help you in every possible way. No time to lose if you are to grab your chance and cash in on the big demand for furs.

Get Advance Information Now!

$731.38 in Spare Time
Herman Johnson made $731.38 in three months last season, trapping in spare time and selling the furs to "Biggs at K. C."

Write at once for advance information on the fur market, price list, complete catalog of trappers' supplies, etc. Traps, Guns, Ammunition, Animal Baits, everything a trapper needs, furnished you at rock-bottom, money-saving prices. Biggs Baits make trapping easy. Frank Carter bought 50c worth of Biggs Baits and 17 days later we paid him $20.45 for the furs he caught.

In and Around Wisconsin

The Wisconsin Cheesemakers' Association will hold its annual convention at Milwaukee, January 9, 10 and 11, 1918. Gus W. Schiereck, of Plymouth, Wisconsin, is the secretary.

The Wisconsin sugar beet crop this year is estimated at 160,000 tons, as compared to 110,000 tons in 1916. Wisconsin is "doing her bit" in helping to increase the production of sugar.

W. L. Carlyle, formerly connected with the Wisconsin College of Agriculture, has recently resigned the position of dean of the Oklahoma Agricultural College. Mr. Carlyle will go to Canada, where he has accepted a position with a business house in Calgary.

Geo. Viebrock, of Polk county, recently took a load of twenty-one sacks of wheat to Osceola and sold same for $108.15. About the same time Jas. W. Moran took ten hogs to a packing plant at New Richmond and went home with a check for $466.12 in his pocket.

The Wisconsin Pea Growers' Company, with factories at Two Rivers, reports a good year notwithstanding the backwardness of the season. Six hundred and fifty acres were cultivated and employment was given to about 200 men, women and children during the season.

Grain elevators in Washington county have been paying $2.80 per hundredweight for the better grade of barley. This is $1.68 per bushel. Barley is reported to be a fair crop, the average yield being about forty bushels, while in some instances it goes as high as fifty bushels.

John Hug, of Washington county, had thirteen and one-half acres of clover this year from which he took 116¾ bushels of seed and sold in Hartford for $22.75 per bushel, making a total of $2,644.86. This is the largest check paid out at Hartford this year for clover seed and indicates the productive value of good land in Washington county.

The Holstein-Friesian Breeders' Association, of Fond du Lac county, has organized with a capital of $25,000. It is this association which plans to erect a $20,000 sales pavilion in Fond du Lac. The officers of the association are: President, T. H. Thackeray, Glenbeulah; vice president, John Puls, Hartford; secretary and treasurer, F. J. Bristol, Oakfield, and sales manager, S. H. Bird, South Byron.

The Bayview Community Club, of Bayfield county, recently launched an effort to bring a pea-canning factory to Washburn. Efforts will be made to secure contracts for at least 300 acres of peas for canning during the coming season. Professor Delwiche, of Ashland Experiment Station, attended the meeting of the club and an address was also delivered by V. E. Brubaker, county agricultural agent.

There is some talk of a beet sugar factory at Oshkosh. A tract of land has been secured and the option has been secured on machinery in a plant now located in a portion of the country where the plant was found to be unprofitable. It is proposed to make the Oshkosh plant coöperative, giving the farmers who raise the beets an opportunity to participate in the management and operation. Farmers of Brown, Winnebago, Outagamie, Waupaca, Fond du Lac and Calumet counties will be asked to lend their support to the new enterprise.

The farmers of Portage county, under the direction of County Agent J. A. Koyner, have arranged for a potato show to be held at Amherst, Wednesday, November 7th. The following varieties only will be recognized: Rural New Yorker, Irish Cobbler, Green Mountain, Early Ohio, Early Rose, Triumph, Gold Mine, Peerless and the best sample of any other variety. Under the rules of the exhibit potatoes must not be washed. There will be a bin-run exhibit and the tubers entered in this class must not be selected, but taken from the bin without picking over.

Ernest Grunst, of Oconto county, last week took thirteen bags of peas to the Falls Elevator Company, of Oconto Falls, and received in payment $157.66. There were thirty-four bushels and forty pounds in the lot, the price being $5.50 per bushel or 9 1-6 cents per pound. This is an exceptional good price. Although corn is not so good in Oconto this year, peas, oats and other crops were splendid and prices are exceptionally good.

The State Councils of Defense are endeavoring to remedy the seed corn situation. In most counties they are listing the names and postoffice addresses of farmers who have seed corn for sale. These lists are distributed among those who are short on seed corn and in this way the buyer and seller are brought together. Seed corn in many counties of the state will be valuable this year. We do not want any farmers to hold up any of their neighbors, but everyone should bear in mind that good seed corn this year is worth a good price.

Mukwonago Poultry Show.

The Mukwonago Poultry and Pet Stock Association have been awarded the official A. P. A. state show and will hold same in connection with their sixth annual exhibit, December 17th-21st.

Mukwonago has held very successful shows in the past and are putting forth special efforts this year. They have engaged Wisconsin's two well-known judges, Wm. A. Halbach and George W. Hackett. This in itself should draw a large entry. The exhibit will be held in the new Studebaker Garage just completed. The hall is large enough to coop 2,500 birds without crowding, and uniform cooping has been arranged for to accommodate that many birds. For premium list write R. J. Porter, secretary, Mukwonago.

The state meet of the Rhode Island Red Club of America will be held in connection with the above show. There will be large cash specials on the Red class, as well as two beautiful silver cups.

State Convention Announcement.

The annual convention announcement of the Wisconsin Potato Growers' Association has just been mailed from Madison.

Wednesday, November 21st, will be devoted to the Wisconsin seed potato trade. Thursday, November 22d will be devoted to sorting and grading standards. The Wisconsin Potato Shippers' Association will meet at Madison on the same day. Friday, November 23d, will be devoted to a discussion of Wisconsin plans for 1918.

The program has been arranged in order to give attention to these important problems during the forenoon sessions. The afternoon sessions will be more popular in nature, as the association is assured of a very large attendance of the public at the afternoon and evening sessions.

One of the most important sessions will be on Thursday, devoted to sorting and grading standards. Recently the Wisconsin Potato Shippers' Association adopted the grade standards as published in Document No. 7, United States Department of Agriculture. These grades will be put into operation during the present shipping season. Warehouses are now being equipped with the necessary screens. The state association desires, therefore, to give a complete demonstration of sorting and grading potatoes in accordance with Document No. 7.

The above subject is of special interest to the general public and considerable interest has already been manifested in the sorting and grading work to be demonstrated during the state convention.

Among the leading men to be present are the following:

E. P. Miller, of Albert Miller & Company, Chicago, Illinois, now with the United States Food Administration; Carl Vrooman, assistant secretary of agriculture, United States Department of Agriculture; O. H. Benson, United States Department of Agriculture; C. W. Waid, Michigan Agricultural College; C. L. Fitch, Iowa Experiment Station; Dr. H. J. Wheeler, Boston, Massachusetts; William Stuart, United States Department of Agriculture; representative railroad men from the Northwest; representatives of machinery, equipment and supplies; representative potato shippers and experiment station officials from all leading potato growing states.

Potato Experience Meeting.

Men who know potatoes from the eye to the heart and are familiar with potato plants from the tip to the root will stage a good-will experience meeting as part of the Wisconsin Potato Growers' convention at the college of agriculture in this city next month.

Experiment station workers, educators, railroad men, dealers and growers will mingle in making the meeting a success. Some of the men who have promised to be at the opening sessions of the Badger potato convention include E. P. Miller, Albert Miller & Co., Chicago; Lou D. Sweet, Denver, Colorado, president of the Potato Association of America; O. H. Benson, leader in boys' and girls' agricultural club work, United States Department of Agriculture, Washington, D. C.; Dr. H. C. Gore, bureau of chemistry, United States Department of Agriculture; C. L. Fitch, Iowa Agricultural College, Ames; Dr. H. J. Wheeler, former head of the Rhode Island Agricultural Experiment Station; C. W. Waid, Michigan Agricultural College, East Lansing, and Hon. Carl Vrooman, assistant secretary United States Department of Agriculture.

Keep the Cows.

A. J. McGuire, of the extension division of the Minnesota College of Agriculture, gives it as his opinion that prices for cows will be much higher next spring than they were last spring. Therefore, he urges farmers to keep their cows. Mr. McGuire says:

Last spring farmers in northeastern Minnesota bought common cows at from $75 to $125, and grade cows for as much as $175. Now, with a shortage of feed, cows are being sold from the same section of the state and many are going to the stockyards to be slaughtered. To sell a cow that you will need again next spring, or that will be needed in your neighborhood, will surely prove a loss. If the war continues, it is possible that the price of cows next spring will be double that of last spring. If you need all the cows and heifers you have, it is a public duty to keep them. A small farm in the timbered section of northern Minnesota without cows is almost without means of living for the owner, and surely without sufficient means of helping the country in the present emergency. You can buy hay this fall much more easily than you will be able to buy cows next spring. We believe it good business to mortgage cows, if necessary, to buy feed. A warm barn will save feed. Fix your barn so that the temperature will not get below freezing in the coldest weather.

Western Electric
Farm Light and Power Plant

For easier work and more butter fat, drive your separator by electricity.

Running water in house and barn is easily possible with electricity.

Don't be a slave to the tub. The Western Electric way is quick and easy.

makes farm work easier

It's the pesky little chores that waste your time and energy. But somebody has got to do them, and reliable help of every kind is scarce. What's the answer?

ELECTRICITY

An electric motor will turn your grindstone, feed cutter, fanning mill, churn and your separator; and will furnish your barn and your house with a supply of running water. An electric motor will clean the house, wash the clothes and keep the home cool during hot spells.

Electricity will do all this in addition to lighting your place with the safest, cleanest, brightest light that's made.

Intelligent farmers are buying Western Electric plants because they are backed by 40 years of electrical experience.

Make your whole outfit a Western Electric—the plant itself, the lamps, motors, pump, cream separator, washing machine, vacuum cleaner, electric iron—in fact, everything electrical for the farm and the home.

A Shortage of Live Stock.

Problem of Reducing Home Consumption Must Be Faced—Waste Also Must Be Eliminated.

THE department of agriculture and the food administration desire to bring to the attention of stockmen and farmers the following general position as to the American and the world situation in food animals and the provisions which are broadly necessary from a national point of view.

One of the incidents of the European war has been the slaughter of large numbers of animals, and it is estimated that already the herds of Europe have been diminished by 28,000,000 cattle, 54,000,000 sheep and 32,000,000 hogs. An accelerated increase in this diminution of meat animals must take place in Europe from month to month as long as the war lasts.

We have two problems in meat supplies: The first is the task of supplying our own soldiers and citizens and helping feed the soldiers and citizens of our allies during the war; and to do this we must furnish larger supplies and must find these supplies for the present largely by reduction in our own consumption and waste.

The second problem is the one which we desire to bring particularly to the attention of the American producer, and that is: After the war, Europe, with diminished animals, and, therefore, diminished annual production of animal food, will require larger imports of meats during the years of recuperation, and will probably require the actual import of breeding animals. Therefore, in a broad way, the outlook to the American producer from now on and after the war will be, (a) a large demand for animal products, (b) a continuing necessity for meat and dairy animals to convert forage and grains not needed for human consumption into meats and dairy products.

The herds and flocks of the country can only be increased over a period of years, and the foundation for such an increase should be laid at once. Such increase is a national interest, and it must be made to the interest of the American producer.

Owing to the large measure of failure in roughage available in western ranges this year there must be either a reduction in western animals or their redistribution into the central and southern states where there is a larger amount of roughage and concentrates available than ever before. Therefore, if the roughage in the central and southern states is saved in an economical manner and if stocker steers, young cows, heifers and ewe lambs of good quality that will be marketed during the next ninety days from the western sections of the country are redistributed, these animals will have been saved and the foundation will have been laid for a material increase of our herds.

Some sections of our country are stocked to capacity with mother ewes, from which lambs are marketed at from seventy to eighty pounds weight. This is the most economic method of producing mutton, just as "baby beef" is the most economic method of producing beef, and the quality of both these meats is of the best.

What we need is more cows and more ewes producing the 700-pound calf and the seventy-pound lamb. We wish to restore the confidence of the farmer in his industry by convincing him that he will get a fair share of a fair price paid by the consumer and extending to him credit on a reasonable basis so he may be able to equip his farm for handling sheep, hogs and cattle successfully. Only by adopting the foregoing methods and principles can production be stimulated and the consumer protected.

Many of these same cattle will be required to re-stock the ranges from which they are now being moved, when normal range conditions return the coming year. The nearer to these ranges the cattle can be wintered the more freights will be saved, both coming out and going back, and the less tax upon the railroads.

It is essential for the future welfare of our nation that the supply of all meat animals be increased. This, not only from the standpoint of directly increasing the food supply of the country, but more live stock on the farm means more fertility in the farm; more fertility means larger grain crops produced at a less cost per bushel; more cheaply produced grain should mean cheaper bread to the consumer as well as more net profit to the farmer. Especially should the energies of the farmer be directed to increasing the sheep stock of the country. Clothing comes next to food as a necessity. Not only does the sheep meet the demand from a food and fertility standpoint, but for its wool for clothing, there is no substitute. Every interest that can make itself felt should advocate and encourage the establishing of flocks of sheep in proportion to size of farms in every section of our country. Every farmer should carry to its yearling form every heifer calf of both dairy and beef breeds and every ewe lamb that promises to have an economic future.

Every effort should be made to bring to maturity every heifer calf or ewe lamb whose breeding will give some assurance that it will convert its feed into either profitable meat or profitable dairy products.

State authorities should take immediate action to control the dogs whose depredations have made sheep raising on the farm so difficult a task.

It is equally desirable to increase hog production in this country by means possible. The increase in demand for pork products is no less than for cattle and sheep products. In this matter the expansion of existing herds is essential, and a redistribution of hogs from centers of less feed supplies to those of greater resources is necessary. Furthermore, the raising of pigs by suburban populations and the utilization of home garbage and perishables not otherwise useful is of double advantage to the nation.

The law that we are now operating under as to food control is conceived and administered in a desire to maintain remunerative and stimulative returns to the producer and to enable these products to reach the consumer with only a reasonable profit allowed for services rendered. Therefore, it is the object of the administration to eliminate unnecessary cost between producer and consumer.

Hog Feeding Experiments.

(Continued from page 1.)

Three of the groups received shelled corn and three hominy feed as a basis of their rations. One of the corn-fed groups received tankage in addition; another received a mixture of 25 per cent tankage and 75 per cent oil cake, and the third corn-fed group received tankage and corn oil cake in separate feeders. The same system of feeding tankage and corn oil cake was also employed in the case of the three groups receiving hominy feed as the basis of the ration.

At the end of the feeding period the pigs receiving corn, tankage and corn oil cake in separate feeders showed the best gains, averaging 1.38 pounds daily per head as compared with 1.11 pounds gained by the pigs fed corn and tankage without corn oil cake. When the corn oil cake and tankage were fed in a mixture the average daily gain was 1.22 pounds. Although the gains were better when the oil cake and tankage were fed separately rather than in a mixture, the cost per hundred pounds gain was slightly less when the mixture was fed. In the first case the cost was $13.67, while with the mixture the cost was $13.58. This was due to the fact that the mixture forced the pigs to use more of the cheaper oil cake and less of the expensive tankage. For the group fed corn and tankage without oil cake the cost per hundred pounds gain was $14.44. These costs show the advantage of displacing an expensive feed with a cheaper one.

Among the three groups receiving hominy feed as a basis of the ration, the best gains were made by the group receiving hominy feed and tankage without oil meal. They made an average daily gain per head of 1.23 pounds at a cost per hundred pounds of $14.40. The group receiving hominy feed and a mixture of corn oil cake and tankage gained 1.16 pounds daily per head at a cost per hundred pounds of $14.01. The third group receiving all three feeds in separate feeders made the poorest gain of 1.11 pounds daily at a cost per hundred pounds of $15.32.

The fact that corn oil cake did not produce an increase in gains when fed with hominy feed is due to the fact that hominy feed and corn oil meal have a large percentage of the same ingredients. The oil of the corn kernel lies in the germ largely and hominy feed contains as many corn germs as two and one-half times its weight in shelled corn. Thus both the oil cake and hominy feed are rich in oil and the corn oil cake does not add to a ration anything which the hominy feed lacks. The results of this experiment taken altogether show that corn oil cake is a valuable feed for fattening swine and when fed in a corn, tankage and oil cake ration, appreciably cuts down the consumption of tankage and thereby lowers the cost of producing gain.

PIGS NEED PROTEIN IN THEIR RATION.
The pig on the left received corn gluten feed alone; the pig in the middle, whole corn alone; the pig on the right, corn and tankage. Tankage furnishes protein necessary for growth.

THE AUTO-FEDAN HAY PRESS.
Bales your hay 20 per cent. cheaper than any other press.
Means one less man. Both belt and power presses.
Engine on same or separate frame.
The AUTO-FEDAN HAY PRESS CO. Kansas City, Mo.
Send Us Your Orders and Consignments of Hay.
1676 West 12th St., Kansas City, Mo.

Serve the Nation
by getting the most feed value out of your corn
Husking ears and making fodder of the rest, gives 25% *more feed value* from the crop, besides saving labor of hand husking. Appleton, the first successful husker, has 45 years' farm machinery knowledge built into it. Simplest, strongest, mechanically *perfect*—husks cleanest, shells least; has most efficient corn saver. Cuts or shreds stalks etc., while husking ears.
APPLETON Husker & Shredder
Guaranteed to do more work with less power than any husker of equal size.
Easiest, safest to run, works corn in any condition, 4 sizes for 4 h.p. engines and up. *HUSKER BOOK FREE.* Appleton Mfg. Co., 5122 Fargo St., Batavia, Ill.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

R. P. M. of Fan.

How many R. P. M. will a fan make on a Model 79 Overland car when traveling at a rate of twenty miles per hour?

Answer.—The fan will run at approximately 1,500 R. P. M.

Reversing a Gas Engine.

Will a Ford magneto generate current when the engine is turned backwards rapidly? Would a reversible gas engine be of any benefit; one that would reverse automatically like a steam engine? What benefit would it be, and has there been any made yet?

Answer.—The Ford magneto should generate as well with the engine running backward as with it running foreward. A gas engine that would reverse when a lever is shifted would find a ready application to tractors and other machinery, including automobiles. We have never heard of such an engine being made. A two-cycle engine may be reversed by changing the position of the spark, but it is necessary to stop and start the engine in order to reverse it.

Care of Storage Batteries in Winter.

I have an auto with a Willard storage battery in it. What should I do with it if I do not use the car next winter? Can I handle it in some way so that I can use it next spring without having it recharged? What is the usual charge for recharging a battery?

Answer.—The easiest way is to leave the battery on the auto. The battery should be fully charged. A fully charged battery will not freeze at 40 degrees below zero if the specific gravity is above 1.240 as it should be. A battery gradually discharges itself; therefore, the battery should be given a small charge at least once a month; and a heavy charge is advisable in the spring just before putting the battery into steady use. Consult your nearest service station as to price for recharging. You can keep your battery in good condition by running your engine idle for an hour or two each month. The battery may be removed from the car and placed in the cellar, but even then it should be fully charged at the beginning and recharged every month.

Front Cylinder Misses.

We have a six-cylinder Overland, Model 86, which misses on the front cylinder. It misses when the motor is cold or until the car has been driven for several miles when the weather is not warm, or when driving against a cold wind. The car is equipped with a Model R Schebler carburetor. The spark plugs are kept clean and the spark seems good. I have had the carburetor adjusted by an expert, but that did not help much. The motor pulls fine when warmed up, but sometimes when on an easy pull or after the motor speeds up after climbing a hill it starts to miss unless I close the throttle slightly for an instant. It will throttle up good when idle if the motor is warm, and is very powerful otherwise. I am using low-test gasoline, but why should this cause one cylinder to miss more than another?

Answer.—Any gas engine runs very much better when warm than when cold, as the fuel is more perfectly vaporized. The front cylinder being in the coldest location and far from the carburetor, is most likely to miss. If your trouble is very serious, look for an air leak around the intake valve stem and at the intake manifold gasket of the front cylinder. An air leak at these points could cause the front cylinder to miss without disturbing the others. The spark and carburetor are not to blame, as all the other cylinders would be affected; there might be a defective wire to the front plug or the plug might be cracked. Bad fitting rings in the front cylinder might cause the trouble.

Sawing Wood.

I am trying to figure out how I can arrange a cross cut saw so that I can operate it with my one-horsepower gas engine. If you can offer any suggestions, I would appreciate it very much.

Answer.—The figure shows the general plan of such an outfit, no attempt

being made to go into detail. The figure shows the side of a wooden framework with a log, L, in place. The log is kept from turning by the dogs, DD. The saw, S, is moved back and forth by the rocker arm, A, operated by the pitman, C, from a crank disk of a pump jack or other speed-reducing device mounted on the other end of the framework and driven from the engine. P is a pin projecting from the side of the frame. When the piece is sawed off the handle, H, on the end of the saw rests on the pin, P, and prevents the saw from digging into the ground.

Engine Stops When Hot.

I have a 12-25 Avery two-cylinder tractor equipped with K-W magneto and double bowl Kingston carburetor. I cannot get much work out of it. It starts easily when cold, but hard when warm. When pulling, it hits on both cylinders in perfect unison for about ten minutes; then dies down and stops of its own accord. I have the carburetor adjusted with two turns of the needle valve, both gasoline and kerosene; the motor seeming to work best without smoke or missing in this position. Have had a local repair man, but he cannot locate the trouble. If you can help me through your paper I would much appreciate it.

Answer.—It might be that your fuel becomes too hot before reaching the carburetor. If the fuel becomes hot enough to vaporize before passing through the needle valve it will not feed properly. Some kerosene tractors are having this trouble when operating on gasoline. Another possible cause of your trouble would be oil flooding the spark plugs and short-circuiting the spark. In this case one would expect to see light-colored smoke from the exhaust.

Ford Engine Heats.

I have a Model T Ford car. My engine heats so much that the water boils after I have run a few miles. My gas and spark are O. K. Changing them makes no difference. I have used three kinds of good oil, cleaning out the crankcase each time with a gallon of kerosene. I keep the oil up to the top pet cock. When the engine is hot, it turns over harder than when cold. It has run 800 miles. The engine always runs well except for heating. When hot it works harder. I keep the radiator full, and have cleaned it out. I use oil made for Fords. Any information you can give me will be helpful.

Answer.—Make sure that your fan belt is tight. A loose fan belt is the most common cause of overheating. As your car has run only 800 miles, the most probable cause is a tight bearing. The brakeband of the transmission may be adjusted too tight. To locate a tight bearing, take off the crank case bottom and loosen the bearing bolts one at a time, turning the crankshaft around each time and noting whether or not the loosening of the bolt frees the crankshaft. When the bearing that is causing the trouble is located, remove the bearing cap and put in a very thin brass or copper shim. A piece of thin, tough paper is sometimes used, but paper is not as good as metal, especially for rod bearings. The paper may soak up soft in the oil and wash out. Before putting on the crankcase bottom, examine each nut on the bearing cap and see that the cotterpins are in place and properly turned. To loosen the brakeband, remove the transmission case cover door and turn the adjusting nut to the left. The foot brake should be tight enough to stop the car immediately, but should not drag.

The Saving in the Price of Fuel Pays for This Engine in Six Months

If we could but set this engine up at your farm—let you run it—examine its simplicity and skill of construction—watch its smooth, pliant action—and then have you see for yourself how little kerosene or fuel oil it used for a full ten hour day, we know you would readily appreciate its value for your farm power.

The new Evinrude Oil Engine will do your work at a clean saving of four-fifths on the cost of fuel. Every complicated, trouble-making device has been eliminated. It is the engine without worry.

The Evinrude Oil Engine

(unconditionally guaranteed)

Simplicity—No carburetor, mixing valve, batteries, magneto, coils, wiring, timer, make and break ignition, spark plug or switches

has neither carburetor, mixing tube or any electrical equipment. The fuel is introduced directly into the cylinder and ignited by the extreme heat of high compression. Twice the temperature necessary for ignition is attained. The engine starts as easily at 10 degrees below zero as at 90 above.

We believe that you will be interested in a farm engine which so ideally combines exceptional economy with unprecedented simplicity, general utility and high grade workmanship. At least allow us to send a catalog.

Now Being Manufactured in Several Sizes.

DEALERS: Responsible dealers are invited to write for full information as to exclusive territory.

GOOD MEN WANTED TO LEARN THE AUTO BUSINESS

Any ambitious, capable young man can make a success for himself, and if you will only prepare yourself, you will get work, because positions are open, waiting for competent men to do Auto and Electrical work.

The American Auto College develops your talent for a splendid, big paying trade. Our course has been enlarged with lots of new work—principles of Knight Motors, 8 and 12-cylinder Engines of new models, Tractors, new Starting Systems, Magnetos, Wiring, Coils, Welding, Brazing, Lathe work, Milling and Drill work, Tool making, Overhauling and Repairing, and all the newest, up-to-date Auto equipment.

AUTO College

$900 TO $3,000 SALARY OR BUSINESS PROFITS PER YEAR

Positions Are Open Tinker repair men are let out as fast as good men are found to take their places. Garage men, letters and telegrams come to us asking for good men. Just prepare yourself and your future and success will be started. Think of the good time, and the money you can make.

LIFETIME OPPORTUNITY—It's up to you to be either a common, hard-working laborer or else learn a good business. Thousands of men will go into the Auto business within the next year. Be one of them. We want you to. Get started right away. Learn here where the opportunities are greatest and best, by our system of actual work in our large shops. No books used; we furnish tools. You do the work yourself. Our men learn easily and quickly because practical work is the best.

Big Electric Starter and Tractor course FREE with the regular Auto course. Write for our big FREE Catalog now.

ALL ANIMALS T

John Goldthorpe — Milton Junction, Wisconsi

See Cut No. 1.

Our 32.31-lb. bull should attract the attention of breeders looking for a hig class sire if individuality, records and breeding count for anything. His sire, Ki Korndyke Veeman Wayne, and dam, Houwtji Vale De Kol (147916), are both sho animals. His dam has made two records above 31.8 lbs. and has few equals as an i dividual. This 32.31-lb. calf is a fine individual, well marked and nearly ready f service. See field note.

Rhoda, Reed and Kruser — Watertown, Wisconsi

See Cuts Nos. 2, 3 and 7.

We are consigning our entire herd, consisting of 50 head, including a 31-lb. f brother of the 31-lb. calf Mr. Pabst is consigning, a 28.22-lb. bull, his dam, t two-year-old daughters of the noted show bull, Oak De Kol Ollie Homestead, 25.33-lb. junior four year old and our herd sire, Pabst Maple Crest King, who dam has over 800 lbs. in a year and 25 lbs. in 7 days. See our field note for mo particulars.

Edwin D. Gibbs — Fox Lake, Wisconsi

See Cut No. 5.

In our consignment you will find animals of show type that are capable of hi production. Lady Oakland, for instance, has been a consistent prize winner a is a granddaughter of Colantha Johanna Lad. See field note for full particula regarding our consignment.

Co-operative Creameries in Minnesota.

Our neighboring state of Minnesota is developing rapidly in dairying, although as yet it by no means comes up to Wisconsin in total figures. Minnesota, however, according to the latest available statistics compiled by the Minnesota College of Agriculture, has 850 creameries as compared to 835 in Wisconsin. While Minnesota has a few more creameries than Wisconsin, the volume of business per creamery is by no means as large as in this state. Minnesota leads us in the number of coöperative creameries, having, according to the latest available figures, 622 such enterprises, while Wisconsin has only 380. Minnesota has 189 individually owned creameries or creameries owned by stockholders, and thirty-nine centralizers. Freeborn county has twenty-seven coöperative creameries; Otter Tail county has twenty-six; Steele county has twenty-three; Martin county, eighteen; Faribault county, eighteen, and Polk, Stearns and Wright, seventeen each. Dairying is widely distributed in Minnesota and is being developed rapidly in the northwestern portion of the state in what is known as the Red River Valley. In all but eleven counties coöperative creameries produce from 40 to 90 per cent of the total creamery butter made. Minnesota stands first among the states in the number of proprietary creameries, but while 73 per cent of the creameries are coöperative, they make only 61.4 per cent of the total creamery butter. The centralizers do by far the largest business per creamery. Though few in number, they have nearly eight times as many patrons as the coöperative and make nearly seven times as much butter per creamery. The coöperative creameries, however, have an average of 25 per cent more patrons per creamery than the proprietary creamery and make 43 per cent more butter. According to a bulletin recently issued by E. Dana Durand and Frank Robotka, of the agricultural experiment station of the University of Minnesota, the patrons of coöperative creameries have each a slightly greater number of cows than those of the other classes of creameries. The difference in this respect is not nearly so significant as the difference in the number of pounds of butter fat discovered per cow. The lower amount of butter fat delivered per cow under the proprietary and centralizer creameries may be partly explained by the greater tendency of the patrons of these classes of creameries to shift their patronage or to divide it among several creameries, but it is more probably due to superiority of the cows contributing to the coöperative creameries.

In 1914 the cows contributing to the coöperative creameries delivered 7.55 pounds of butter fat per cow more than did those contributing to the proprietary creameries and 8.16 pounds more than those contributing to the centralizers. If this difference be assumed to be due wholly to difference in actual production per cow, then on a basis of 519,785 cows contributing to the coöperative creameries in 1914, this increased product per cow would represent a value of approximately one and a quarter million dollars. When converted into butter this quantity of butter fat would represent a value of $1,835,000.

Apparently the patrons of coöperative creameries take a greater interest in dairying than the patrons of the others. This results not only in the building up of higher-yielding herds, but also in a desire to deliver to their creameries a raw product of higher grade. Naturally the fact of ownership gives the patrons of the coöperative creamery a sense of pride in their association not experienced by those of other creameries. Another factor resulting in the production of a higher grade of raw material by the patrons of coöperative creameries is that they themselves reap the full benefit of the higher price obtained for the higher-grade product. Statistics show that the difference between the amount paid patrons per cow by coöperative creameries as compared with other creameries is relatively greater than the difference in the quantity of butter fat delivered per cow.

Coöperative creameries pay a larger proportion of their gross receipts to patrons than do the others. Of every $100 received, the coöperative creameries pay to their patrons $1.80 more than do the proprietary creameries, and $2.70 more than do the centralizers.

In the running expense per pound of butter made, the coöperative creameries make the most favorable showing, the cost being .11 cent less per pound of butter than that of the proprietary creameries, and .19 cent less than that of the centralizers. It will be observed that the cost of manufacturing is highest for the centralizers. The advantage gained by the centralizers through a more efficient utilization of equipment because of their large output is outweighed mainly by the cost of maintaining receiving stations and transporting the raw material long distances, weaknesses peculiar to this type of organization.

Of considerable interest are the figures regarding the amount retained per pound of butter made by the different classes of creameries. In coöperative creameries this amount represents the total used or set aside for maintenance, reserves, sinking and other funds and surplus. If the creameries run on a profit basis this amount, in addition to the above, also includes profits. The amount thus retained by the coöperative creameries is less than .6 cent per pound of butter made, or approximately $700 per creamery per year. The proprietary creameries retain .87 cent or nearly 50 per cent more per pound than the coöperative creameries. The average per creamery, however, is approximately $725. The centralizers retain nearly 1.1 cents per pound, or more than $9,000 per creamery. It is obvious that the coöperative creameries, by retaining only a relatively small amount per pound of butter for maintenance and reserves, and giving their patrons full benefit of all remaining receipts, are saving the dairy farmers of the state hundreds of thousands of dollars annually.

Of the twenty-six counties having three or more of the two classes of creameries, the coöperative and the proprietary, twenty-two show a higher price paid to patrons for butter fat by the coöperative creameries. The excess varies from .09 cent to 4.38 cents, it being less than 1 cent in nine of the twenty-two counties, from 1 to 2 cents in seven counties and from 2 to 4 cents in six counties. Where the proprietary creameries paid more than the coöperative creameries the excess was less than 1 cent in two of the four counties, and in only one county was it 2 cents or more.

Another Cumulative Record

To the Editor:—Rena Ross 2d, a ten- year-old Ayrshire cow, owned by Highland Farm, Bryn Mawr, Pa., has completed a five-year cumulative advanced registry record.

Beginning her test September 22, 1910, she has produced as follows:

First entry 12,046 pounds milk, 467.80 pounds fat; second entry 12,321 pounds milk, 517.59 pounds fat; third entry 18,849 pounds milk, 713.56 pounds fat; fourth entry 15,411 pounds milk, 612.68 pounds fat; fifth entry 10,703 pounds milk, 411.25 pounds fat.

An average for five cumulative periods of 13,866 pounds milk and 544.57 pounds fat.

Rena Ross 2d is by Finlayston, sire of forty-three daughters in advanced registry, whose average for eighty-six entries is 10,440 pounds milk, 428.14 pounds fat, and out of Rena Ross, one of the greatest cows of the breed, with a record of 15,072 pounds milk and 642.86 pounds fat.

Records like Rena Ross 2d are attracting many new enthusiasts for the breed. J. G. Watson.

Ailing Animals.

Thin Mane.

Please tell me the quickest way to make a horse's mane grow thick and long.

The growth of a horse's mane may be stimulated by frequent washings with salt water, one even tablespoonful to a pint of soft water.

Tumor.

I have a two-year-old mare colt and several times I have noticed that when she lies down a small bladder-like sack will protrude about the size of a hen's egg. This goes back after she gets up. Also at times it can be seen when she urinates. This colt was somewhat stunted when young, but she does not seem to be sick. I have only worked her lightly. I noticed this trouble first last spring before I broke her. Would it be safe to breed her in the spring?

Your mare should have an examination by a veterinarian to determine the nature of the sack or tumor you mention. If only a small sack which can be opened and healed she may be bred without danger. However, have an examination before breeding.

Probably Granulated Eyelids.

I have a coming three-year-old colt which went blind last summer. Last winter his eyes seemed to be swollen. He was put to pasture early in the spring and about the 15th of July was taken out and fed oats and hay. Do wolf teeth cause blindness and would it do any good to have them pulled?

If your colt has been blind for a considerable length of time he will probably never regain his eyesight. If not blind now, with only a swelling of his eyelids, the sight may be retained. If the tear ducts are closed it will require special treatment by a competent veterinarian. If the lids only are swollen and the colt's eyeballs are not affected, his eyes should be bathed once or twice a day with the following: To one pint of hot soft water that has been boiled add as much boric acid as will dissolve. Then to three parts of this solution add one part of boiled soft water. If you do not get results, have a qualified veterinarian examine his eyes. There is no positive proof that wolf teeth cause blindness, yet it is best to have them pulled, for they are of no benefit to the horse and they will not be responsible if the horse goes blind.

"The hero of sheep husbandry is not the breeder of thousand-dollar rams, but the common farmer who answers the nation's appeal and buys twenty or thirty sheep to grow wool that the soldier boys in the trenches may be kept warm. Such farmers," says the American Sheep Breeder, "are patriotic citizens—soldiers for the common good. The shepherd who discourages these farmers and says 'it will not pay' is an enemy to his country and merits the lash of public scorn."

It's Natural for a Hog to Wallow

Here's a good thing to do: Provide a wallow close to the feeding grounds to which add Dr. Hess Dip and Disinfectant. As the hogs pass back and forth from the wallow to the feed trough, the **DIP** will kill the lice and cleanse the skin, while the **DRIP** will destroy the disease germs and the worms that pollute the ground. That will mean a clean, healthy skin, freedom from lice, a safeguard against disease and larger, better porkers.

"As Ye Would."

If I should see
A brother languishing in sore distress,
And I should turn and leave him comfortless,
When I might be
A messenger of hope and happiness—
How could I ask to have what I denied
In my own hour of bitterness supplied?

If I might share
A brother's load along the dusty way,
And I should turn and walk along that day,
How could I dare,
When in the evening watch I knelt to pray,
To ask for help to bear my pain and loss,
If I had heeded not my brother's cross?

If I might sing,
A little song to cheer a fainting heart,
And I should seal my lips and sit apart,
When I might bring
A bit of sunshine for life's ache and smart—
How could I hope to have my grief relieved,
If I kept silent when my brother grieved?

And so I know
That day is lost wherein I fail to lend
A helping hand to some wayfaring friend;
But if it show
A burden lightened by the cheer I sent,
Then do I hold the golden hours well spent,
And lay me down to sleep in sweet content.

—The Christian Advocate.

Destroy the Crickets.

Black crickets which at this time of the year find their way into houses and storerooms are the enemy of curtains, rugs and clothing. So diligent are these pests in their work of destruction that they will ruin a garment in a single night.

The first chirp of a cricket that reaches the ears of the careful housewife should be a warning to her to find some means of destroying him and his fellows. The most effective method of doing this, particularly if the crickets are numerous, is to use a poisoned bait made of one pound of bran, one ounce of Paris green, three ounces of sirup, one-fourth of an orange, including the peeling, and one and one-half parts of water.

Mix the bran and Paris green thoroughly in a pan while dry. Squeeze the juice of the orange into the water and chop the remaining pulp and peel to fine bits and add them to the water. Dissolve the sirup in the water and wet the bran and poison with the mixture, stirring thoroughly so as to dampen the mash throughout.

Small amounts of the damp mash should be put in shallow pans or dishes and placed in the closets, behind or under heavy pieces of furniture, or any place frequented by crickets. In basements and cellars small portions of the mash may be placed behind boxes, under shelves and in the corners. The mash in the dishes should be kept moist by adding a little water and stirring, but it should not be sloppy. The crickets work mostly at night and, therefore, the poisoned mash should be distributed in the evening.

Uncooked vegetables, such as chopped carrots or potatoes, also make good cricket bait when strongly poisoned with arsenic or Paris green and distributed in the same manner as the bran mash.

Care should be exercised in the use of these poisoned baits, particularly if there are children in the house. If the bait is used in rooms which are in constant use it is a good plan to put the bait in place in the evening after the family has retired for the night and gather it up the first thing in the morning, so that there will be no danger of little fingers finding their way to the poison.

Value of the Country Church to the Community.

Hope, optimism, the silver lining to every cloud, form an aspect of church doctrine which no other agency has so consistently presented. In the midst of a hard, grinding occupation, filled with tyrannic necessities, the gracious interpretations of life through the rural church bring constant spiritual recuperation for the community from its ills, menaces, disasters and defeats. This realization of safety in the turmoil of work and disappointment is an achievement of community value.

The country church socializes the children from all the homes of the parish, not to mention the other members of the family. This is a great service to the country community to have provided a wholesome means of getting acquainted. The family in its little circle around the dining table and in the kitchen brings each child to know intimately two adults and several children—an invaluable apprenticeship to society; but these children need to know many other children from other types of homes, and the neighborhood church along with the neighborhood types is the means. Under auspices of good supervision, through the sacred stories of the race handed down in Bible literature, this acquaintance takes place.

The personality and talents of children and youths are developed in this process. A laboratory of life and varied accomplishment is furnished in the peculiar avenues of church organization. The symbolism of the church is a subtle education in itself, touching upon those relationships in life which are too delicate and sensitive for bald definition and crude instruction.

The pastor or priest is a community leader and interpreter of relationships between man and man, neighbor and neighbor. He is student of human life from the dim past to the present. He is the recognized community psychologist and sociologist. In this important role of an interpreter of life to the people of his parish, a resident pastor living among his people, year in and year out, knowing the locality, its land and its problems, gains an advantage of intimacy and confidence which no visitor or itinerant can develop, however brilliant he may be. The opportunity of knowing the minds and souls of his parishioners through a course of years, by close contact and studious observation, family by family, child by child, is a value hard to overestimate. The pastor can thus intelligently adjust his counsel to the individual from the point of view of both the family and the community.

In social movements of a public nature, the country clergyman is looked to for social wisdom. It is his social instinct and historic sense which helps select the worthy enterprise and pass up the futile. His enthusiasm for human values in life is a social force among a people whose economic occupations by necessity are intensely engrossing. Literature, reading, music, debate, discussion, play, sports, politics, government, in their manifold aspects touch the minister's professional career, just because he is a specialist on all the intricate relations of persons in the whole circle of living. Only by daily contact as a pastor, passing from home to home, touching soul after soul, shepherding his flock one by one, can the country clergyman reach a high standard of social influence. Mass movements in the country occupy a secondary place, a fact which handicaps the circuit-riding country preacher.

When, therefore, a country parish has no resident clergyman as pastor or priest, it loses nearly all the possible community values of a church leader. No stranger can fill his place. No touch-and-go ministrations can make up the lack. There doubtless are accumulating in our farm population, which is roughly about 35 per cent of our total American population, social losses due to the rural absentee pastor system.—[Bulletin.

Uncle Sam Tells How.

If summer fruits have stained your table linen, if Johnny upset the ink on your best rug, if your new black silk has acquired a grease spot, if Nancy's apron or Billy's blouse has met with an accident, let Uncle Sam tell you what to do. The United States Department of Agriculture has just issued a bulletin outlining methods for the removal of practically any kind of stain.

According to this bulletin, one of the first requisites in removing a stain is to know the kind of fabric which is spotted and, if possible, the nature of the stain. Some stain removers will give excellent results when applied to cotton or linen, but will prove unsatisfactory or even disastrous when used on silk or wool. Treatment which will remove certain kinds of stains immediately may cause other kinds of stains to become set.

Another important point in removing stains is to work while the stain is fresh. Cold or lukewarm water is usually the housewife's best bet for a first step, says this bulletin, if the nature of the stain is not known and if the fabric is not injured by water. Hot water should not be used until it

Style Life

Style in Foot-Schulze Shoes is more than merely on the surface. It is built in. It has staying power. It is long-lived. It is there as long as the shoes last.

This style endurance is not merely sound materials alone. It is the result of scientific planning of lasts which distribute the strain evenly. This keeps them from losing shape, sagging, running down.

This method of building shoes means comfort, too. For it involves fit. Shoes that fit as they should wear longest and retain their trim appearance.

The whole family should wear Foot-Schulze Footwear. Go to the Foot-Schulze dealer in your town. He's easy to find; a good man to know.

Largest Kerosene (Coal Oil) Mantle Lamp House in the World

is determined that the staining material is such that it will not be set by heat. Stains from meat juice, blood, egg, milk and other materials containing protein are set by hot water.

If the stains are of such a nature that they will not yield to laundering or sponging with water or with water and soap, it is necessary to use one or more of a number of chemicals. Besides water and soap the bulletin names as the substance most useful in removing stains, Javelle water, potassium permanganate solution, oxalic acid solution, ammonia water, carbon tetrachlorid, French chalk and cream of tartar, each of which may be used successfully, provided the right one is used at the right time.

Specific instructions for removing various stains are contained in this bulletin and anyone who has ever undertaken a task of this kind will readily see what an immense help such directions would be. Write to the United States Department of Agriculture, Washington, D. C., and ask for Farmers' Bulletin 861 on "The Removal of Stains From Clothing and Other Textiles."

Food Pledge Week.

Food Pledge Week, when all women over the age of sixteen will be asked to sign a pledge in the interest of food conservation, has been postponed until the week beginning October 28th, this for the reason that the dates formerly set, October 21st to 28th, conflicted with the final Liberty Loan week. This postponement will give those in charge of the arrangements another week in which to perfect their plans and it is hoped that not a farm home in the whole Central West will be missed in the canvass and that every woman in every home will respond to the call.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

The Dancing Shoes.

Dear Young Folks:—This is my first letter to you. I like to read your letters. I have three sisters and four brothers. Three of my brothers and one sister go to school. I am fourteen years old and in the eighth grade. I like fairy stories and I am going to tell you my favorite, The Dancing Shoes.

A king once had twelve daughters, and one was just as beautiful as another. These twelve beautiful daughters all slept in the large hall of the castle, where their beds stood side by side. Every night the door to the hall was locked and bolted by the king himself.

Now each princess had a pair of dancing shoes which were to be worn when they gave a ball; but it happened that no matter how many new pairs of dancing shoes he gave them, the next morning when he unlocked the door he found the shoes all worn out and full of holes.

There was not a wise man in the kingdom who could think how it happened, for all the windows and doors were so carefully bolted that no one could get in or out of the castle.

At last the king said that whoever would find where his daughters went in the night to dance and how they got out of the room, should have one for his wife. But the king also said that if anyone tried for three nights and then could not tell the secret of the worn-out shoes, he should give up his life. It was not long before a prince came to the kingdom who wished to try out the secret.

That night the young prince was placed in a room near the hall where the maidens slept, and a door was left open so that he could follow them if they should go away to dance.

As soon as the prince lay down it seemed as if lead had been placed on his eyelids. He could not keep awake, and the next morning the dancing shoes were worn out the same as before. The second and third nights the same thing happened, and then the prince was put to death without the least pity.

Now it happened that a poor soldier, who had been wounded and could not serve any longer in the army, was on his way to the town where the king and his daughters lived, when he met an old woman.

"Why are you going to the town?" she asked.

"I don't know," he answered, "but if I have no better luck, I may try to find out the secret of the king's daughters."

"That is not so very hard," said the old woman. "All you have to do is to keep awake, and if you do not drink the wine which they will try to give you, you will have no trouble."

Then, taking a little cloak from under her shawl, she said: "Here, I will give you this cloak, for I have no use for it. When you throw it over your shoulders it will make you invisible. By its aid you can follow the girls as they go to dance."

Her good wishes gave the soldier courage. He went before the king and told him he should like to try to find out the secret.

The soldier, in the evening, at bedtime, was led to the little room. When the king's daughters went to bed the eldest brought to him a goblet of wine; but the soldier had tied a sponge under his chin, so that the wine all ran into the sponge. Then he lay down, and after a little while he began to snore as if he were asleep.

When the twelve sisters heard him snoring they began to put on their beautiful dresses and dance for joy, all except the youngest, who said, "I don't know why it is, but I feel as though something were going to happen."

When the girls were all ready, the eldest went up to her bed and struck it gently. It began to go down until a flight of stairs was seen leading into the darkness.

All the girls went down one by one, and the soldier jumped out of bed and threw his cloak over his shoulders. Going down the stairs he trod on the dress of the youngest sister. She cried aloud, "What was that? Who was pulling my dress?"

"Don't be foolish," said the eldest princess, "your dress caught on a hook."

At the bottom of the stairs there was a green field, with a road running through it, with trees on both sides with silver leaves. The soldier broke off a branch to show the king. When the youngest girl heard the noise she said that there was something wrong, but all the rest of them called her foolish.

Farther on they came to trees with leaves of gold and then trees with leaves of diamonds. The soldier broke off a branch of each. Each time the youngest said that she was afraid, but the rest of the girls said it was a gun firing in their honor at the palace.

Before long they came to a lake, where there were twelve little boats, and in each boat sat a prince. As the maidens came up they took seats in the boats.

Now the soldier, unseen, took a seat in the boat with the youngest princess. As they rowed away the prince said, "I do not see why this boat rows so hard; I cannot keep up with the rest."

"Perhaps you are not so strong as they," answered the princess.

The soldier saw on the other side of the lake a castle, bright with lights, and he heard sweet music coming over the water. When all had landed they went to the ballroom, where the maidens danced with life and spirit. The soldier danced among them, unseen.

The maidens danced and danced till their shoes were quite worn out, then they were rowed again over the lake, the soldier going with them, unseen, as before.

As soon as they reached the shore the soldier ran up the stairway and jumped into bed. When the girls came up the stairs they heard him snoring very loudly, and the eldest said, "At least there is no longer danger from him."

On the second and third nights he went with them, and each night they danced until their shoes were worn out. On the third night he took a golden cup as proof of what he had seen.

The next morning he showed the king the branches and the cup and told his story. When the king had heard the story he sent for his daughters. The daughters said what the soldier said was true. The king asked the soldier which one of the twelve princesses he wanted for his wife, and the soldier answered, "As I am no longer young, I will take your eldest daughter."

So they were married and when her father died the soldier became ruler over the whole kingdom. Elsie.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Enclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date fall and winter 1917-1918 catalog, containing 550 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating thirty of the various simple stitches), all valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

2254—A simple style for the little girl. The pattern is cut in 5 sizes: 2, 3, 4, 5 and 6 years. Size 4 requires 3⅛ yards of 36-inch material.

2238—Dress with bolero and with sleeve in either of two lengths, for misses and small women. The pattern is cut in 3 sizes: 16, 18 and 20 years. Size 18 requires 6¼ yards for the skirt and bolero and 2⅝ yards for the waist, of 24-inch material.

Waist 2244-Skirt 2243—A stylish dress for afternoon or business. The skirt pattern 2243 is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. The waist pattern 2244 is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 2⅝ yards of 44-inch material for the waist, and 3¾ yards of 44-inch material for a 24-inch size for the skirt. Two separate patterns, 10 cents each.

2249—A simple coat and cap for the little one. The pattern includes coat and cap. It is in 4 sizes: 1, 2, 3 and 4 years. Size 2 requires 2 yards of 36-inch material for the coat and ⅝ yard for the cap.

1947—Ladies' house dress, with sleeve in either of two lengths. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6⅞ yards of 36-inch material for a 36-inch size.

1917—Ladies' dressing or house sack. The pockets may be omitted. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 yards of 44-inch material for a 36-inch size.

2003—Ladies' dress. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 7¾ yards of 36-inch material for a 36-inch size.

2237—A popular model. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 5½ yards of 44-inch material.

1793—A neat dress for mother's girl. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 3¾ yards of 44-inch material for a 12-year size.

1149—Children's night drawers, with gathered or straight lower edge, with long or short sleeve, and with either of two styles of neck finish. The pattern is cut in 5 sizes: 2, 4, 6, 8 and 10 years. It requires 3½ yards of 36-inch material for an 8-year size.

2236—Girls' blouse dress, with two styles of sleeve. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 4½ yards of 44-inch material for a 12-year size.

2248—Ladies' house gown or lounging robe. The pattern is cut in 4 sizes. Small, 32 and 34 inches bust; medium, 36 and 38; large, 40 and 42; and extra large, 44 and 46 inches. Size medium requires 7 yards of 36-inch material.

Over a Thousand People Wrote This Book

It contains a rare story of winter discomfort succeeded by real comfort; of big fuel expenditures cut down from 35% to 50%; of unusual conveniences made possible in old or new houses, churches, halls and business blocks.

When you consider the question of heating your home this fall, you should have it before you. It's the simple stories of people who have solved that question to their complete satisfaction by installing the

PIPELESS CALORIC FURNACE

The Original Patented Pipeless Furnace

They put in this furnace because of these remarkable guaranteed advantages:

1. Only one register is needed; no pipes in walls or basement.
2. It will heat your house comfortably and evenly.
3. The cellar will be cool enough to store fruits and vegetables all winter.
4. It will save you 35% of your fuel bill--some say more.
5. The firepot is guaranteed for five years.
6. It will burn any fuel.
7. Its heating principle is both scientific and healthful.

MEETS ALL CONDITIONS

The Caloric Pipeless Furnace meets all these conditions fairly and squarely. It is guaranteed by the oldest and largest manufacturer of warm air heating systems in the United States.

We want you to see this book, together with our "Progress" booklet, which describes the principle of Caloric heating. Ask your dealer, or write to us direct, and we will send you a copy of both by return mail.

International Sunday School Lesson

(By REV. P. B. FITZWATER, D. D., Teacher of English Bible in the Moody Bible Institute of Chicago.)

Lesson for October 28, 1917.

Ezra Returning From Babylon.

LESSON TEXT—Ezra 8:15-36.

GOLDEN TEXT—The hand of our God is upon all them for good that seek him.—Ezra 8:22.

An interval of some fifty years intervenes between the dedication of the temple and the journey of Ezra to Palestine. Some stirring events in the world occurred in this time which greatly helped the Jews. It was during this time that the episode of Esther's being made queen and the elevation of Mordecai occurred, which favorably disposed the Persian government tow rd the Jews. The time was auspicious for Ezra to make his request unto Artaxerxes. The supreme aim of Ezra was the restoration of the true worship of Jehovah, for it is evident that the work done by Zerubbabel had largely failed of its aim. In order that Ezra might be an efficient instrument in the hands of God for the accomplishment of this purpose, he "prepared his heart to seek the law of the Lord and to do it, and to teach in Israel the satutes and judgments" (7:10). There are three stages in the experience of every true teacher. First: to seek the law of the Lord. Second: to do it. Third: to teach it to others. The last is impossible without the first two.

The royal commission granted to Ezra embraced—

(1) The return of all whose free will prompted them to do so (7:13).

(2) Ezra's being given magisterial authority over the district "beyond the river" (7:25, 26).

(3) Exemption from taxation to the Levites (7:24).

(4) Conveyance of offerings from the king and his officers (7:15, 19).

I. Register of Ezra's Companions (1-14). Doubtless this is a representative list of those who joined Ezra. There is clear implication that the twelve tribes are represented among those who returned. (See 2:70; 6:16, 17.)

II. Ezra Sends to Iddo for Ministers for the Temple Service (vv. 15-20). Before the journey to Palestine was actually begun, Ezra gathered about him his companions who were to accompany him, to see whether they were representative. In this review he discovered that none of the sons of Levi were in the company. So he sent chief men to Iddo, who was doubtless the president of the school of the Levites, for ministers for God's house. In response to this appeal, 38 Levites and 220 Nethinims joined him.

III. Ezra Seeking the Guidance of the Lord (vv. 21-23). The journey was full of deadly perils. It lay through a region infested with Bedouin marauders. Ezra, fully conscious of these, and ashamed to ask help of the king, proclaimed a fast, in which in deep humiliation they sought the guidance and protection of God. This is a fine illustration of the independence, and yet dependence, of the men who fully trust God. His chief concern was for the honor of God's name. He had so confidently and repeatedly spoken to the king of the divine sufficiency that now to have asked for a guard of soldiers would cause him to blush with shame. In this critical hour they committed themselves to the care of Him who keepeth Israel. We should begin every journey, every undertaking, every new piece of work, every new day by seeking the direction of God. No friendship or business interest ever reaches its best unless God's hand be in it and upon it. We should not go anywhere, engage in any business or have any friendship upon which we may not ask God's blessing and aid. They sought this for themselves, for their children, and all their substance. They knew that as soon as they made God first his blessing would be upon them, and as soon as they forsook him his power would be withdrawn and his wrath would be upon them.

IV. The Treasure Committed to Twelve Priests (vv. 24-30). Combined with their faith in God, we find practical business sense. Honest, trustworthy, good men were selected (v. 28). To such only should be intrusted the Lord's money—gifts offered freely to the Lord by his people. Again, the money was carefully counted and weighed, and the amount set down. The men were held accountable at the end of the journey for everything intrusted to them. Men ought to be held to strict account for everything intrusted to them, to the very last cent. The men to whom this was intrusted were holy; the gifts were God's; they did not belong to any man; they were charged with the obligation to deliver these gifts before the chief priests.

V. The Safe Arrival at Jerusalem (vv. 31-36). The journey lasted four months. They carried with them millions of dollars' worth of treasure, through a region infested with marauding Bedouins, yet God delivered them from their hands. At the end of the journey they testified to the faithfulness of God in bringing them safely on (v. 31). The safe arrival at the end of each day's journey is due to the good hand of our God upon us. After resting three days, the treasure was brought into the temple and burnt offerings were made before the Lord Jehovah.

Live Stock and Commercial Notes.

Gathered by Representatives of The Wisconsin Farmer.

Kintz & Son Poland Offering, November 6th.

TUESDAY, November 6th, Nathan Kintz & Son will sell 40 head of big-type Poland Chinas at their farm near Berlin, Wis. For several years this firm has been breeding the medium types, but realizing that the big-types were the most profitable and the kind the public wanted, they "turned over" and during the past two years they have purchased some of the best sows money could buy, and the Wisconsin men that attend this sale are going to get the benefit, for you will have a chance to buy the produce. The sows they bought raised good litters that are sired by some of the most noted boars of the breed. For instance, Wonder's Wonder, a line-bred A Wonder. Some by Golden King, he a son of the well-known Goldengate King. Big Orange Equal is a combination of Big Orange and the $1,000 Oakland's Equal. Others represent Walker's Blue Valley breeding and there are two sows of Mouw's Jumbo breeding. It is all strictly big-type stuff and of the very best. We have attended several sales this fall, and with one exception the offering has been sold just in ordinary condition. While we believe the buyer loses money by not putting the flesh on his hogs, we are sure that the buyer profits by it. Take a boar that is in ordinary flesh when put in the breeding pen, he will often gain, but if you have one that is fat, he will get thin and often he is not sure until some of this flesh is taken off and when you have to rebreed you are dissatisfied with your purchase. The Kintz offering will not be fat, but are in nice condition for immediate service. The gilts and sows will continue to grow and if you want to put the meat on, you can do it as cheaply as Kintz. We want you to get one of the catalogs and study the breeding. We believe that this is going to be a good place to buy Polands. We hope he has a great sale and the stuff deserves it, but in as much as this is the first pure-bred hog sale of the big-type breeding in that vicinity, Mr. Kintz does not expect any record-breaking prices. For that reason we want to urge some of the older breeders of the state to attend or be represented at this sale and get some of this well-bred stuff. It will make you money in your winter sale. Get a catalog at once and please mention this publication when writing. If you can't attend in person, send T. P. Shreve your buying instructions, in care of Mr. Kintz. See page 19.—Adv.

Inter-County Holstein Sale.

THE Inter-County Holstein Sale November 8th and 9th, Watertown, Wis., is going to have the greatest array of high record A. R. O. Holsteins that has ever been consigned to this company. There will be three bulls above 31 pounds and a number of others, whose records approach the 30-pound class very closely. There are also going to be an unusually large number of choice individual A. R. O. cows, due to freshen near sale time. It will, therefore, pay all enthusiastic Holstein breeders throughout the state to pay close attention to this event and to send for catalog as soon as possible. Francis Darcey, Watertown, Wis., secretary of the Inter-County Holstein Sale, will be pleased to mail catalogs to you and furnish you with any other information concerning this sale that you may wish to know. See advertisement on pages 12 and 13.—Adv.

Dolin Bros.' Inter-County Holstein Sale Consignment.

DOLIN BROTHERS, Clyman, Wis., are consigning several head to the Inter-County Sale, including Jesse Fobes Myrtle Beets, a granddaughter of Homestead Junior De Kol and Sir Beets Cornucopia Netherland, two of the most noted sires of the Central West. This two-year-old heifer is a large individual, possessing conformation that is characteristic of this breed. She is practically a show heifer and we prophesy that there will be few in the sale that will surpass her as an individual. She is bred to King Segis Champion Rue and will be due to freshen about December 1st. It will pay buyers on the market for high-class individuals to take the trouble to look her up at the Inter-County Holstein Sale, November 8th and 9th. See pages 12 and 13.—Adv.

John Goldthorpe's 32-Pound Bull.

WE are consigning to the Inter-County Holstein Sale Company a choice 32-pound bull calf, nearly ready for service, out of his well-known cow, Houwtje Vale De Kol 147916, a cow that has few equals in the state as an individual and one that has produced 32.31 pounds butter in seven days, as well as a 31.82, with 618 pounds milk in seven days at five and a half years. We consider this cow as one of the finest individuals we know of, being a large, smooth cow possessing great capacity and a perfect top line, as well as having a well-placed udder of good texture. The sire of this 32-pound bull we are consigning is King Korndyke Veeman Wayne, also a show animal. This 32-pound bull calf, therefore, inherits a wealth of good individuality and judging from the present condition of this calf, we have every reason to believe that he will develop into the high standard set for him by his ancestors. He is a strong, vigorous calf, well marked and looks as though he would have good size and constitution that is so necessary in a masculine herd sire. This animal is not only the highest record calf consigned to the Inter-County Holstein Sale, but also comes from one of the best lines of ancestry that will be represented in the sale. See pages 12 and 13.—Adv.

NEXT WEEK'S SALE PROGRAM

Tuesday, October 30	Duroc Jerseys, J. J. Cain, Skyberg, Minn.
Wednesday, October 31	Short-horns, Carpenter & Carpenter, Chicago, Ill. Guernseys, Waukesha County Guernsey Breeders' Association, F. E. Fox, Secretary, Waukesha, Wis.
Thursday, November 1	Guernseys, Waukesha County Guernsey Breeders' Association, F. E. Fox, Secretary, Waukesha, Wis.

McDermott's Short-horn Offering.

TO the Carpenter-McDermott Short-horn sale at Chicago, Wednesday of next week, October 31st, J. W. McDermott, Kahoka, Mo., is contributing 30 head, probably the best lot he has ever offered in a public sale. Mr. McDermott has bred and exhibited and sold many outstanding Short-horns and the offering he will make at Chicago will add to his reputation. With the exception of two head they were all bred by Mr. McDermott, and represent an offering of Cumberland blood, the majority of the cattle being the get of Cumberland Marshal, the great sire that made such a notable reputation in the McDermott herd. There are also a few mature matrons in this offering that are in calf to this great bull. Two outstanding young bulls by this sire, Cumberland Marshal 5th, a winner at this season's shows and Cumberland Marshal 6th. Other good young bulls by a Choice Goods sire are also in the offering. These cattle will please the most discriminating buyer. If you have not already secured a catalog for this notable event write for one at once to Carpenter & Carpenter, Baraboo, Wis., or J. W. McDermott, Kahoka, Mo., as per the advertisement on page 21. Kindly mention this paper when writing.—Adv.

Waukesha County Holstein Sale, Waukesha, Wisconsin, November 16th.

W. L. BAIRD, secretary of the Waukesha County Holstein Breeders' Sale Company, is lining up some of the best bred Holsteins that have ever been consigned to their sale. Mr. Fred Pabst is consigning a 31-pound bull calf; Gustave Pabst is consigning practically a 30-pound calf; the Carnation Stock Farm is consigning a 26-pound son of Johanna McKinley Segis, as well as a son and daughter of Rag Apple Korndyke 8th, which is an example of the high-class animals that will be sold this fall at the Waukesha County Holstein Breeders' Sale. See page 20.—Adv.

A. L. Kirst, Tomah.

THE above breeder has a nice lot of spring boars that we are glad to recommend to prospective buyers of Chester Whites. They are very smooth. Good backs and feet and are in a fine, thrifty condition. Kirst will give you a good deal on a boar and some gilts and if you want a trio from which to get a start with this breed, write A. L. Kirst, Tomah, Wis.—Adv.

Edwin D. Gibbs' Inter-County Holstein Sale Consignment.

MR. GIBBS, of Fox Lake, is again consigning several very high-class animals that have distinguished themselves in the show ring as well as in the advanced registry. For instance, Lady Oakland has been shown at seven fairs and in that time was only beaten by one animal. She is a granddaughter of Colantha Johanna Lad, one of the well-known eastern herd sires. Mr. Gibbs is also consigning another high-class individual in Hilda Lassie, that would be a credit in anyone's herd. She is an A. R. O. cow and has a 24-pound junior four-year-old daughter. A choice yearling granddaughter of Colantha Johanna Lad out of a 24-pound junior four year old bred to a 33-pound bull is also included in his consignment. Also Grace De Kol Korndye, a large, strong type of Holstein with a 24-pound record that will freshen in December, being bred to a son of Colantha Johanna Lad. Mr. Gibbs is likewise consigning two yearling bulls with a lot of A. R. O. backing; one is a grandson of Colantha Johanna Lad out of a 24-pound cow having much A. R. O. backing; the other is nearly ready for service and sired by a 33-pound bull out of a 16.5 junior two year old. Every dam for four generations in this bull's pedigree has a creditable A. R. O. record. See advertisement on pages 12 and 13.—Adv.

Stapleton's Dispersion Sale.

ATTENTION is called to the Holstein-Friesian sale of Mr. Joseph Stapleton, which will be held at North Lake, Wis., November 10th. On that date 50 head of richly-bred Holsteins will be sold. Of this number 29 will be of milking age and a number of the cows are producing from 60 to 75 pounds per day at two milkings. In building up this herd Mr. Stapleton has emphasized high production and he has used the right combination in his breeding operations to attain that end. Those who are looking for something extra good should keep this sale in mind. For further information send to Joseph Stapleton, Waukesha, Wis. See advertisement on page 19.—Adv.

Don't Forget the Cain Duroc Sale.

THIS is our last opportunity to call your attention to the J. J. Cain Duroc boar sale at Skyberg, Minn., October 30th. This is the Cain herd [illegible]

WINNEBAGO POULTRY YARDS, A. J. Schloerb, Mgr., R. 23, Omro, Wis.

LEGHORNS, TURKEYS, WILD DUCKS—We have a few R. C. White Leghorn ckls., 90c ea.; 2, $1.60; 3, $2.25. Just the thing to cross on your flock to secure resistance to cold, easy keeping and large egg production. Young White Holland turkeys, $3 each. Wild Mallard ducks, $1.50 ea. Island Poultry Yards, Oshkosh, Wis.

sale, as two-thirds of the offering is sired by this $2,500 boar. At the Omaha show this boar was third and shown in ordinary flesh. He is a great hog and the good breeders should have some of his get. Cain also sells gilts on the above date. Send your bids to T. P. Shreve. Skyberg is near West Concord, north of Dodge Center, Minn. —Adv.

Waukesha County Guernsey Breeders' Semi-Annual Sale.

THE Waukesha County Guernsey Breeders' Association will hold its 11th semiannual sale of registered Guernsey cattle at Waukesha, Wis., October 31st and November 1st. On October 31st pure-bred females will be offered and on November 1st grade females and pure-bred males will be sold. Chas. L. Hill, of Rosendale, offers 25 females whose breeding and individuality are the very best. They include A. R. cows with splendid records, such as Glenwood's Hazel, that has a record of 615 pounds of fat. Many young heifers are offered, being granddaughters or daughters of such famous sires as Glenwood's Reputation, Itchen May King, Princess Jewel and Governor of the Chene. Geo. McKerrow & Sons Company offer several splendid females of the very best breeding, tracing back to that wonderful sire, Governor of the Cheene. There are two daughters of this bull, one of them out of a 572-pound cow. John H. Williams has a very attractive offer of females of May Rose breeding, being daughters of Rhea's King of the May or granddaughters of this bull. He also offers the prize-winning son of Rhea's King of the May. Wm. Jones' consignment is rich in the blood of the famous Lord Waukesha and Lork Yeksa. He offers a daughter of Lord Waukesha with a record of 698 pounds. Geo. W. Browne's consignment includes 11 females of special merit, including a daughter of Rhea's King of the May and several granddaughters of this bull. Also a granddaughter of Governor Whimson, a son of the Governor of the Chene, and other splendid individuals. Fruit Bros., offer an A. R. cow sired by Glenwood's Stranford with a record of 649 pounds. E. S. Murdock offers his splendid herd of ten pure-bred females. Other consignors to the sale will be: J. M. Harvey, Basse Bros., F. C. Smith, Crouch Bros., L. J. Wendt, Geo. Konrad, Goodhand Kingston, Connell Bros., R. Riedeburg, F. E. Kummrow, J. L. Williams, J. R. Love, Chas. Mitchell, Wm. Fisher, Lawrence Blackwell, A. C. Eschweiler, Freehoff Bros., Earl Roberts and Roy Burton. Write at once to F. E. Fox, secretary, Waukesha, Wis., for catalogs. Please mention The Wisconsin Farmer in your letter. See page 22.—Adv.

Carpenter-McDermott Sell Superior Short-horns.

CARPENTER & CARPENTER, Baraboo, Wis., and J. W. McDermott, Kahoka, Mo., open a series of Short-horn sales to be held in Chicago, October 31st to November 2d. This will be Carpenter & Carpenter's first auction sale, and they are offering the public the best they have. It will be remembered that the initial purchases made by the Carpenters was the best that money could buy. They have added good cows to their herd each year until today they have one of the best breeding herds in America. In selling Maxwalton Queen they sell one of the greatest show and breeding cows produced in recent years. We doubt if Avondale ever sired a better female. This cow was a winner in 1914, 1916 and 1917, and was grand champion female at the great Iowa State Fair this year. Anoka Clipper 3d by Regal Stamp is one of the attractions. She is bred to Collynie Type, he by Cumberland Type. Collynie Mint Drop sells with a heifer calf at foot. A winner as a junior calf and grand champion female at Shreveport, La., 1916. Violet Maid 3d with bull calf at foot and bred to Collynie Type. There are several bull attractions. Collynie Cullen 5th is a roan by Lord Cullen and is out of the dam of the well-known Dorothy Mine. Collynie Cullen 6th is out of a daughter of Avondale. Daughters and granddaughters of Avondale predominate in this herd. Meritorious breeding and individual excellence have been combined to constitute an offering that will command the attention of the particular buyer. For catalogs mention this paper and address Carpenter & Carpenter, Baraboo, Wis., or J. W. McDermott, Kahoka, Mo. See page 21.—Adv.

Practical Oil Engine.

AN oil engine attracting much attention in the farm field is being manufactured by the Evinrude Motor Co., makers of the widely known Evinrude rowboat and canoe motors. This engine, a small, stationary super-Diesel type, burns kerosene and crude oils, offering relief to the farmer from the almost prohibitive prices of gasoline. It saves from 75 to 80 per cent the cost of operating the ordinary gasoline engine. Two sizes are now being manufactured, one and one-half and three horse power. Larger sizes will be added later. Write for catalog. Address Evinrude Motor Co., 703 Evinrude Block, Milwaukee, Wis. See page 11.—Adv.

Schoenfeld's Short-horns.

MR. C. J SCHOENFELD & SON, Fox Lake, Wis., have one of the up-to-date Short-horn herds and Poland China swine in the state. Their herd bull, Village Mystic, has proved himself a great breeder. He weighs over 2,400 pounds in breeding condition. They offer at present a large bunch of bulls and heifers at attractive prices. A good number of the bulls are ready for good hard service and are reds, roans and whites and their heifers will make big milking cows, just the kind for Wisconsin farmers to make money from. They will be pleased to have you make them a visit. See page 21.—Adv.

Consigning Their Entire Herd to Inter-County Holstein Sale.

MESSRS. RHODA, REED AND KRUSER are consigning their entire herd, consisting of 50 head, to the Inter-County Holstein Sale. The herd is headed by Pabst Maplecrest King 151413, a 25-pound bull, whose dam also has a semiofficial record of better than 800 pounds butter to her credit. This sire is a handsome individual and is out of one of the leading cows in the Fred Pabst well-known Holstein herd that has yet a bright future before her. Some of the most conspicuous individuals in the herd are as follows: A 31-pound bull, ready for service, out of Pabst Hengerveld Colanthus, a full brother to the 31-pound bull calf, which Mr. Pabst is consigning to this sale; a 28.22-pound, eight months old calf, sired by Pabst Maplecrest King and out of Marcade Marie, a 28.22-pound daughter of Canary Paul. Marcade Marie is an extreme individual of the high-producing type of Holsteins and is the kind of cow one should look for when selecting a herd sire. Also two daughters of Oak De Kol Ollie Homestead, the grand champion at the National Dairy Show at Springfield last year as well as the grand champion at the Waterloo Dairy Congress, 1917; two daughters of the 28-pound cow, Marcade Marie; one daughter of a 25.53-pound junior four year old; one daughter of a 22.75-pound junior two year old and her son by Pabst Maplecrest King; one daughter of a 19.05 junior two year old; one daughter of a 24.25-pound thirteen-year-old cow; also a full sister to a 28-pound cow. From the fact that Mr. Rhoda is a well-known judge of good individuality and that this herd is so well represented in the advanced registry, gives the public an exceptional opportunity to purchase high-class animals. See pages 12 and 13. —Adv.

Fred Pabst Inter-County Holstein Sale Consignment.

MR. FRED PABST is consigning Pabst King Colanthus 206276, born March 13, 1917, a 31.41-pound bull calf out of the great producing cow, Pabst Hengerveld Colanthus, that is unquestionably one of the best cows in Mr. Pabst's herd. She is a large, handsome individual as well as a high producer. At the age of four and a half years she made 31.41 pounds, averaging over 82 pounds of milk per day and continuing throughout the year with a production of 873 pounds of butter, 20,714 pounds of milk. As a junior two year old she was run on yearly work and made 560 pounds butter and 12,000 pounds of milk. The sire of Pabst King Colanthus is Pontiac Champion, whose daughters are making exceptional records, 62 of which have been admitted to the advanced registry. King Pontiac Champion is not only one of if not the leading A. R. O. sire in the state of Wisconsin, but is also by that famous bull, King of the Pontiacs, that has to his credit more A. R. O. daughters than any other bull of the breed, living or dead. He also has more 30-pound daughters than any other bull and so many other points of superiority that they are too numerous to mention. Pabst King Colanthus besides being royally bred and coming from a long list of distinguished A. R. O. ancestors is in addition an exceptionally fine individual, mostly white in color. We are of the opinion that this is by far the best individual 30-pound calf that Mr. Pabst has yet offered at public auction and should, therefore, be one of the leading attractions at the Inter-county Holstein Sale. See pages 12 and 13.—Adv.

Good Poland Boars.

L. D. EASTMAN, had some of the good boars in the Grant county sale. He has about a dozen boars that he picked out to fill the mail order trade that are good. These boars are immune and Mr. Eastman stands back of every boar with a liberal guarantee. If you want a few gilts he will sell some that will please you. He can sell you boars and gilts unrelated —write him.—Adv.

NEWS OF THE SALE RING

Atwater's Duroc Jersey Sale.

L. F. Atwater held his second sale of Duroc Jersey boars at his farm near Bangor, Wis., October 17th. He sold 32 boars at an average of $88.89 the highest average ever made on boars in Wisconsin. Seven gilts sold for an average of $90. Naturally, Atwater had the offering in the pink of condition and well grown and the men were there to bid on the good ones. The crowd was not large, owing to the rain, but those that weathered the inclement weather were there for business. The top boar was the Omaha futurity winner, a son of P. S. Wonder, that sold to the Fourhouse Farms for $340. Riley Martiny & Son bought one of the best herd-boar prospects in the sale when they got Investor Jr. for $200. This boar has a great outcome and is a proven breeder of worth. The top gilt was a daughter of Proud Chief Jr. and sold to Geo. E. Brooks for $170. It was a high-class offering in every respect, and was worthy of the average obtained. To I. E. Stickelman goes the credit of making the high average of the state on boars, as well as the record on sows, made last winter at Atwater's. We follow with a complete report:

1, Riley Martiny & Son, Baraboo, Wis., $200; 2, M. Anderson, Cottonwood, Minn., $110; 3, J. T. Cox, Lodi, Wis., $50; 4, J. T. Cox $50; 5, A. L. Hyzer, Storm Lake, Ia., $75; 6, J. W. Thomas, West Salem, Wis., $72.50; 7, Fourhouse Farms, Tyler, Minn., $340; 8, Wm. Magee, Fennimore, Wis., $87.50; 10, B. L. Rundell, Hammond, Wis., $100; 11, Emil Burmeister, Harmony, Minn., $160; 12, Geo. D. Sprain & Son, West Salem, Wis., $107.50; 13, Ludwig Larson, Bangor, Wis., $135; 14, W. C. Edge, Fennimore, Wis., $107.50; 15, Geo. McGinnis, Mitchell, S. D., $50; 16, C. G. Schroeder, Alma, Wis., $77.50; 17, Floyd Selck, Hanover, Wis., $100; 18, Roy Horsfall, Mt. Hope, Wis., $75; 19, Geo. Ruetten, Sparta, Wis., $42.50; 20, Ira Richardson, Bangor, Wis., $65; 21, Aug. Jandt, Bangor, Wis., $60; 22, J. T. Cox, $60; 23, J. T. Cox, $50; 24, A. L. Sweet, Warrens, Wis., $52.50; 25, Carl Piska, Bangor, Wis., $42.50; 26, Wm. Thomas, Ridgeway, Wis., $165; 27, Henry L. Jones, Cambria, Wis., $55; 28, J. T. Cox, $52.50; 29, Fred Weltmann, Guttenburg, Iowa, $52.50; 30, Wm. Roberts, Bangor, Wis., $50; 31, A. C. Cass, Viroqua, Wis., $57.50; 32, F. C. Vehrencamp, Bangor, Wis., $55; 33, Geo. Murray, Estherville, Ia., $100. Gilts: 34, Ames Bros., Weaver, Minn., $55; 35, Geo. Murray, $60; 36, Geo. E. Brooks, Sparta, Wis., $170; 38, Ames Bros., $65; 39, Ames Bros., $155; 40, Geo. E. Brooks, $75; 41, W. C. Edge, $52.50.

SUMMARY.

32	boars...	$2,842.50; average....	$88.82
7	gilts....	632.50; average....	90.00
39	head....	3,475.00; average....	89.00

Harvest Season Nearly Finished.

(Continued from page 8.)

bushels; barley, sixty to seventy bushels; rye, twenty to thirty-five bushels and spring wheat from eighteen to twenty-eight bushels per acre and of good quality. Some grain is still unthreshed. Potatoes are being dug, but are not coming up to expectations, while the few early varieties were from fair to a good crop, yielding 200 bushels per acre. The late varieties are running anywhere from seventy-five bushels to 150 or 160 bushels per acre, but of a good size and quality. Not much doing in the cattle line. With corn being a failure, feed will be short and everything is being sold that cannot be wintered through with the feed on hand. Prices on hay and feeds are too high to warrant buying for stock feeding.—Jens Chrenholdt.

Wood County.—Corn was badly frozen September 10th and 11th and is about 40 per cent of a crop and poor quality at that. Oats are not turning out at threshing as was expected, the heads being injured by grasshoppers as they were ripening, but it is above normal as to yield and quality, even for a period of five years. Wheat, not much is raised here, but what there is, is fairly good; more than usual sown this fall. It was injured about 15 per cent by grasshoppers. What is left has a fine appearance, so has rye. Hay is a normal crop. Potatoes are above normal. Live stock is normal and in good condition. None on feed for markets. Cost of feed is double the normal price.—Peter Brown.

Keep the hens in laying trim. Their "shells" are valuable food ammunition.

BIG-TYPE

POLANDS

Sell at

BERLIN, WIS., TUESDAY, NOV. 6, '17

40 head of the kind that are in demand.
Spring Boars and Gilts and Tried Sows.

Every Animal of Popular Big-Type Breeding

Farm Disinfectants.

THE necessity for keeping animal quarters healthful is every day receiving more attention. The agricultural colleges have taught us that many of the diseases which afflict live stock are due to germs, and that by taking proper care to keep the quarters in right condition a large proportion of these diseases can be avoided. Among the several preparations prepared by Dr. Gilbert Hess for use on the farm, perhaps not one is more highly beneficial than Dr. Hess dip and disinfectant. As the name implies, this preparation is both a dip and a disinfectant. As a dip, it has a large use for the treatment of scab in sheep, for destroying ticks and lice and for whatever purposes animals are usually dipped. Parasites, skin diseases, and filth and foul odors are costing farmers and stockmen enormous sums of money every year. By a little intelligent effort the greater part of this waste can be avoided. Dr. Hess dip and disinfectant is a powerful germ destroyer; it purifies the air and keeps down foul odors and smells. It makes animals' quarters healthful. No argument ought to be necessary to convince anyone of the usefulness of such a preparation where domestic animals are kept. Animal diseases are contagious and spread as rapidly as do those which afflict the human family. Destroy the germs of disease and you go far toward keeping contagion out of your herd. A great point in favor of Dr. Hess dip and disinfectant is its uniformity. A dip must be uniform in quality, because if it be stronger than what you used formerly, animals are liable to be injured; and if it be weaker, the solution may be altogether ineffectual and the dipping or spraying will have no beneficial effect. Dr. Hess dip and disinfectant is standardized, all the oils used in its compounding being tested to make sure that they contain the right amount of disinfectant and insecticidal properties. See page 14.—Adv.

RUST BROS.

OFFER the richly bred Holstein bull, Sir Ina Lotta Hengerveld 188663, born Aug. 18, 1915. Ready for service. His dam, Ida Lotta Hengerveld, at 3½ years made 21.34 lbs. of butter in 7 days, 31 days after calving. She is from a long line of heavy producing ancestors, records of her three nearest dams averaging 27.20 lbs. butter in 7 days. She has inherited this heavy producing ability, and transmits it. Sire of bull for sale is Daisy Johanna 5th, 1st prize two year old at Wisconsin State Fair, 1915. His dam has two A. R. O. daughters. Arthur Rust, West Allis, Wis.

REGISTERED HOLSTEIN BULL

AND heifer calves sired by Pabst Canary Pontiac Champion 142885, and out of well-bred heavy-producing cows. Call and see our herd or write

SUPERIOR SHORT-HORNS from TWO GREAT BREEDING HERDS

CARPENTER & CARPENTER
40 HEAD
BARABOO, WISCONSIN

70 Lots

J. W. McDERMOTT
30 HEAD
KAHOKA, MISSOURI

Maxwalton Queen and bull calf. A winner in 1914, '16, '17. Grand champion Des Moines, 1917.

UNION STOCK YARDS
CHICAGO, WEDNESDAY, OCT. 31

CARPENTER & CARPENTER will sell **Maxwalton Queen,** a feature of the season's sale. Practically their entire show herd has been included. Heifers and bulls of the most desirable breeding, cows with calves at foot. The get of imported LORD CULLEN and bred to COLLYNIE TYPE by Cumberland's Type. AVONDALE BREEDING PREDOMINATES. Several imported females—Mysie, Augusta, Clipper, Victoria, Wedding Gift, Rosewood—breeding of this caliber throughout. J. W. McDermott will sell 30 head, comprising the strongest and best bred lot of cattle that he has ever offered. All but two head were bred in his herd, and are strong in the blood of the great sire, Cumberland Marshal. Many of the younger things were sired by him, while the older females are in calf to his service. Some great bull propositions are in the offering, including Cumberland Marshal 5th, a winner in the season's shows, and a great prospect; Cumberland Marshal 6th, by Cumberland Marshal; Jealousy, by Good Count; Cumberland Repeater, one of the herd bulls, and other good ones. The females are a great lot, including both show and breeding material of the highest class. Get the catalog for this sale, one of the big events of the season. Address, mentioning this paper,

CARPENTER & CARPENTER, Baraboo, Wisconsin, or J. W. McDERMOTT, Kahoka, Missouri

Jones and Reppert, auctioneers. Attention is called to the sales of Carpenter & Ross and Leslie Smith & Son, at Chicago, November 1st and 2d, when 160 head of imported Short-horns will be sold.

SHORT-HORN CATTLE.

Short-horn Steers Break World's Record

FORTY SHORT-HORN STEERS, weighing 1,692 lbs., bred in North Dakota, fed in South Dakota, topped the Chicago market July 9th at $14 per cwt., averaging $236.88 per head. They were part of a shipment of eighteen loads of Short-horns, 263 head, which sold for $55,025.39, averaging slightly under $210 per head. Market authorities pronounce this performance without a parallel for all time and regardless of breed. The Short-horn is the breed for you.
AMERICAN SHORT-HORN BREEDERS' ASSOCIATION 13 Dexter Park Ave., Chicago, Ill.

OAK LAWN SHORT-HORNS

YOU SAW MY CATTLE at the state fairs and have read the report of my winnings. I have young bulls of the same breeding for sale.

W. G. JAMISON & SONS Appleton, Wis.

EXTRA! EXTRA! EXTRA!

ELEVENTH ANNUAL SALE OF REGISTERED GUERNSEYS WAUKESHA, WISCONSIN OCTOBER 31--NOVEMBER 1

OCTOBER 31ST—SEVENTY-FIVE head of pure-bred Guernsey females will be offered at public auction, consisting of a splendid collection of advanced registry cows with records as high as 696 lbs. fat. Many daughters of A. R. cows will be included in this sale, sired by such well-known bulls as Governor of the Chene, Lord Yeksa, Rhea's King of the May, Gov. of Myrtle Place 11th; granddaughters of Princess Jewell, Lord Mar, Glenwood's Reputation, Governor of the Chene, etc.

The selection of young heifers is unusually good, many of them bred to reputable sires as: Florham Victor (a son of Ne Plus Ultra), Westmoreland Squire (a son of Governor of the Chene), Dairymaid's Nonpareil of Iowa (whose dam has a record of 825 lbs. fat), Governor of Myrtle Place 11th, etc. Several bulls of excellent breeding and type will be sold October 31st.

NOVEMBER 1ST—FIFTY head of high-grade Guernsey females will be sold. These grades represent producers. If you want to start with Guernseys, this is an excellent opportunity to purchase animals that will repay you in a very short time. TWENTY-FIVE head of PURE-BRED MALES will also be sold November 1st. If you wish to raise the standard of your herd, buy one of these bred-for-production sires and let him show you what he can do.

ALL the animals have been carefully inspected by a committee and they will be tuberculin tested previous to the sale date. No by-bidding is allowed and you are assured of a fair and square deal. Be with us on both days. For catalag, write

Try EDISON'S 1918 AMBEROLA in your home

The New Edison Diamond Amberola—Model 50

NO matter how delightful your home may now be, Mr. Edison's New Diamond Amberola could not fail to make it more so. A Diamond Amberola in your living room would make it the brightest and cheeriest spot in the world for you. It would become a hallowed place where your family and friends would gather together and enjoy with you the gems of the world of music—heart-songs, ballads, hymns, opera, concert, musical comedy, vaudeville—no end of entertainment.

We could tell you that the Amberola reproduces songs so naturally that, when you turn your back and close your eyes, it is difficult to believe that the living artists are not actually in the room. We could write whole pages in an effort to convince you that the New Edison Diamond Amberola is a musical instrument indispensable in your home, but one note of the voice of Anna Case singing "Annie Laurie," or one ripple of music from the bow of Albert Spalding playing "My Old Kentucky Home," would convince you as no printed words ever could.

We could tell you that the New Edison Diamond Amberola has a GENUINE DIAMOND REPRODUCER (no needles to change). We could tell you that Edison Blue Amberol Records are almost unbreakable and unwearable. We could tell you many other wonderful things about the New Edison Diamond Amberola and Edison Blue Amberol Records, but the Amberola itself can tell you in its own music language far better than we can.

HEAR MR. EDISON'S AMBEROLA BEFORE YOU PURCHASE ANY PHONOGRAPH OR TALKING MACHINE, WHATEVER NAME IT MIGHT HAVE. And when you do hear the Amberola, hear it in your own home right where you would expect to use it after you bought it. Just give it a few days' trial and it will sing and play itself into your heart and your life so that you will never want to part with it even at many times its cost.

SPECIAL FREE TRIAL OFFER

Now, about that free trial? Find in the list below the name of the dealer nearest you. Fill in the coupon at the bottom of this page and sign your name and address on the margin. The dealer will send you the beautiful Amberola Book from which you may select the instrument you prefer. He will also send you the catalog of Blue Amberol Records. Select any 12 records. The dealer will send you the Amberola and records, which you may keep for three days. After three days you may purchase the Amberola and records for cash or on terms which will be arranged by the dealer, or you may notify the dealer that you do not care to purchase and he will take them back without the trial costing you one cent. No red tape! No expense or obligation on your part! Just an out-and-out FREE trial.

No doubt many times you have thought that you would buy, or try, a phonograph "some day." Send the coupon NOW. Make TO-DAY YOUR "SOME DAY."

Write for our beautiful Amberola Book, "A Master Product of a Master Mind." It's FREE

WHAT THE AMBEROLA GIVES YOU

With the Edison Diamond Amberola you may have any kind of music at any time and any place. Think what a priceless possession this is!

Mr. Edison has so perfected the art of phonographic recording that every sound-wave, from the crashing thunder of great military bands to the most delicate wisp of sound from the lightest-toned violin, is caught by his recording instruments and reproduced on Blue Amberol Records. His method of recording is a secret with Mr. Edison and his most trusted associates. That is why no record but an Edison record has all the natural warmth, richness and feeling of the living artist. There is no thin, metallic twang such as you hear from talking machines—nothing but smooth, round, rich and mellow melody. You actually would be astounded to think that anything but a human being could produce such music.

Mr. Edison, placing quality before all else, selects his artists solely on merit. He has the choice of the best vocalists and instrumentalists of the world make records for him. That is why, on Edison Blue Amberol Records, you hear the foremost singers, instrumentalists, bands, orchestras, etc., of the day. As illustrating what you may have when you own an Amberola we have selected at random the following Blue Amberol Records from the extensive Blue Amberol catalog:

HEART-SONGS

Annie Laurie
Ben Bolt
Juanita
Kathleen Mavourneen
Last Rose of Summer
Old Folks at Home

SACRED SELECTIONS

Abide With Me
Beyond the Smiling and the Weeping
Crossing the Bar
Glory Song
I Love to Tell the Story
Dreams of Galilee

BALLADS

Only a Pansy Blossom
Silver Threads Among the Gold
I'll Take You Home Again, Kathleen
Take This Letter to My Mother
Only to See Her Face Again
When You and I Were Young, Maggie

BANDS

America, I Love You
El Capitan and Manhattan Beach Marches
Cavalry Charge
Boston Commandery March
Blue Danube Waltz
Heart of America March
Garden of Roses Waltz
Passing Review—Patrol

PATRIOTIC RECORDS

America, I Love You, March
Dixie
My Country, 'Tis of Thee (America)
We're Tenting To-Night
American Fantasie
Yankee Doodle

MARCHES

Dominion of Canada March
Boys of the Old Brigade March

VOL. XLVI. NO. 44. THURSDAY, NOVEMBER 1, 1917. WHOLE NO. 1866

Eleventh National Dairy Show

SCENES AT NATIONAL DAIRY SHOW.
1—Aged Jersey cow class. 2—Aged bull class, Holstein breed. 3—Guernsey heifer class, two years and under three.

REPRESENTATIVES of the government made it plain to the thousands of dairymen at Columbus, Ohio, last week that Uncle Sam must lean very heavily upon the herds and herdsmen of America for support during the world war. The eleventh annual National Dairy Show was held in the magnificent new coliseum on the Ohio State Fair grounds. In fact, the dairy show crowds helped to dedicate to the service of the live-stock industry this, another great, structure. From the standpoint of the building and grounds there are many who would like to go to Columbus again, but other events transpired which make it improbable that the next show will be held in the Buckeye state. Evidently the people of Columbus do not appreciate the greatness of such an exhibition as the National Dairy Show Association put on at Columbus this year, judging by the attendance last week. Surely there are thousands of farmers within a few hours' ride of Columbus who would have been glad to have attended the show had they understood what it was. But the weather was very bad on the big days when the world's pick of Jerseys, Holsteins, Guernseys, Ayrshires and Brown Swiss were brought into the ring. Ohio has for the most part very good roads, but cold, penetrating days with a light drizzle of rain or a snow falling most of the time are not conducive to overland travel. Hence there is some excuse for the small attendance in automobiles on the part of Ohio farmers. One cannot so readily find an excuse for the people of Columbus, a city of 275,000 people. These people should have attended by the thousands. Students should have been present en masse at this great show. But the people of Columbus seemed to look upon the dairy show as an opportunity to "rake in the shekels" and they proceeded on the theory that "opportunity knocks but once." Perhaps in another year Columbus would show greater appreciation of such a show with support which the show merited. There are those who believe that the policy of moving the show about each year is a mistake, and that the show would be stronger if firmly established in one city. As to next year's show, decision as to the place will be made probably in January. Chicago, Minneapolis, Milwaukee, Kansas City and St. Louis are candidates for entertaining the show, and we venture the assertion that any one of them will outstrip Columbus in local support. The East may also make a strong bid for the 1918 show, and the East knows how to appreciate a dairy show, as was shown at Springfield in 1916.

While Columbus offered poor support to the show, visitors from long distances came in as large numbers as was expected. There are many thousands of lovers of the dairy cow who will travel a thousand miles or two to witness the competition in classes in the National Dairy Show ring. The grain-belt states furnished a good part of the crowd and, as the award lists will show, a good part of the animals which carried away blue ribbons. The West has in times past bowed to the East in prize dairy cattle, but the West has made rapid progress, and with its abundance of grasses and grains and the rough feeds is sure to be the final center of dairying as an industry. This is not said in disparagement of those men who have worked for years in the East building up breeds of cattle which have furnished our foundation stock for western herds. Nor do we expect the western breeders to gallop away in the near future with all the ribbons offered. But the West will make its showing and from the vast number of her herds will come stock which she need have no fear of entering in any show ring. For volume of production, which is getting away from the purely sporting end of the business, the West must lead, and the great increases which the government is demanding in dairying must be made here on our hillsides and in the rich valleys of the grain belt. New York and New England and even Pennsylvania cannot add very materially to their dairy resources, though there will be a steady growth due to better feeding, better breeding and more careful work on the part of the dairyman. But New York and New England are close to their limits of feed production, and in times when much feed must be bought, and at prevailing prices, the chance for increasing the business is greatly reduced. But the grain-belt farmers can, almost every one of them, keep a few more cows. Almost every one of them can raise a little more feed to take care of these few more cows. The room for expansion of the dairy business is from Ohio west to the Pacific coast, and especially in the Mississippi valley.

A thought uppermost in the minds of the patriotic dairymen who visited this great show was that we must by every possible effort urge farmers not to kill dairy cows. Pres. H. E. Van Norman, from the Pacific coast, went so far as to say that not even should any of the poor, unprofitable cows be killed. This is a surprising statement, coming from the president of the greatest dairy show associa—[Continued on page 5.]

CURRENT EVENTS

THE liberty loan drive came to an end last Saturday night, with results which can hardly fail to convince the world that the American people are standing back of the administration with their money. The first loan was for two billion dollars; this second one was for any amount which could be raised between three and five billions. The minimum amount was far surpassed, the entire country rallying to the financial needs of the nation in magnificent manner. On Liberty Day, last Wednesday, a perfect torrent of subscriptions poured in on the treasury department, hundreds of millions of dollars being subscribed. Patriotic exercises were held all over the country; ex-President Taft, Wm. J. Bryan and all the leading members of the president's cabinet taking prominent parts. It developed that President Wilson had subscribed for $15,000 worth of the new bonds, having taken $10,000 worth of the first issue. Other men high in public life contributed in like manner, while millions of the common people dug down into their savings, to make good the slogan "A liberty bond in every American home." Practically one-half of the money which the government is raising by these bond issues is being loaned to its European allies, the other half going to put an efficient American army in the field. The American people have responded in a truly historic manner to Uncle Sam's plea for funds.

GENERAL HAIG, the British commander, and General Petain, the French commander, continue their terrific drives against the German lines in Flanders, making good ground gains and capturing thousands of prisoners and hundreds of guns. Notwithstanding the stormy weather, the operations have been carried on unceasingly, a terrific artillery bombardment inevitably preceding and accompanying the infantry charges. The moral effect upon the German troops can be imagined. There is good reason to believe that the efficiency of the Teutonic fighters is being weakened and that Germany is not nearly as strong as it was a year ago. Dispatches from Russia assert that the Russians destroyed sixteen German warships recently, most of them being topedo boat destroyers, but at least one German dreadnaught being disabled. A large number of German aeroplanes and Zeppelins have been shot down over England and France, so that the week has been one of material gains for the allies. Several of the Zeppelins which raided English coast towns were lost in fog flying over France and were brought down before they could return home. One Zeppelin was brought down intact, its crew of twenty or more men being captured. General Pershing, commander of the United States forces, was under fire in the trenches captured from the Germans last week, but there is no indication as yet that Uncle Sam's boys have taken a hand in the fighting.

LACK of coal is putting Holland on the verge of destitution. Factories have been shut down, thousands have been thrown out of work, railroad schedules may be abandoned, and it is feared there will not be enough coal to keep the pumps running that prevent large areas of the Netherlands from becoming inundated. Thus are parts of Holland as described in a letter just received by a prominent Chicago man from a friend at The Hague. Endless masses of German deserters are running away from Germany into Holland, according to the letter. The deserters are vicious and disorderly and thousands of them have been seized and put into camps. According to this man, America's motive for entering the war is not unknown by the Dutch people. America and her ideals are not as yet appreciated, but already have many champions.

UNDER an arrangement between the United States food administration and the Canadian food controller, large supplies of Canadian wheat are to begin moving at once by way of the great lakes to the eastern American flour mills, so that they may resume full capacity operations. The wheat will be purchased through the Canadian government at the same price as fixed for the American 1917 crop. Its coming will relieve pressure upon the American northwestern supply. Unless peace should intervene and the food administration come to an end there will be no change in the government purchase price of the 1917 harvest of wheat. This announcement was made recently by the food administration in denial of rumors current in some agricultural sections that the price was to be altered. In event of peace it was pointed out that large quantities of wheat now inaccessible in Australia and India would be available to the world's markets and the maintenance of the present American price would be highly unlikely.

LAST Sunday was a special day of prayer for the success of American arms, an official proclamation to this effect having been issued by President Wilson during the week. The president said: "Whereas, it behooves a great free people, nurtured as we have been in the eternal principles of justice and of right, a nation which has sought from the earliest days of its existence to be obedient to the divine teachings which have inspired it in the exercise of its liberties, to turn always to the Supreme Master and cast themselves in faith at His feet, praying for His aid and succor in every hour of trial, to the end that the great aims to which we dedicate our power as a people may not perish among men, but be always asserted and defended with fresh ardor and devotion, and, through the divine blessing, set at the last upon enduring foundations for the benefit of all the free peoples of the earth: Now, therefore, I, Woodrow Wilson, president of the United States, gladly responding to the wish expressed by the congress, do appoint October 28th, being the last Sunday of the present month, as a day of supplication and prayer for all the people of the nation, earnestly exhorting all my countrymen to observe the appointed day, according to their several faiths, in solemn prayer that God's blessing may rest upon the high task which is laid upon us, to the end that the cause for which we give our lives and treasure may triumph and our efforts be blessed with high achievement." Churches all over the land held special services and the day was one of memorable solemnity.

THERE is good reason to believe that both Bulgaria and Turkey are as tired of the war as Austria and are only held in line by the iron hand of the kaiser of Germany. Dispatches during the week stated that while the kaiser and King Ferdinand of Bulgaria were exchanging assurances of the unshakable loyalty of Bulgaria and Germany to each other and of the permanent nature of the alliance of the two countries, Bulgarian agents abroad were endeavoring to get into touch with the allied powers on the subject of peace and subsequent relations. Their efforts are declared to be inspired by apprehension that Germany and Austria-Hungary, particularly the latter, may not be overzealous in defending Bulgaria's interest at the peace conference, as well as by a desire on Bulgaria's part to escape from revolving in an exclusively German orbit after the war. The German attempt to maintain control of Bulgaria's single coal field has excited much unfriendly comment in Bulgaria, and Field Marshal Von Mackensen is charged with favoring the Rumanians at Bulgarian expense. Furthermore the press controversy in certain German and Austrian newspapers in which the Serbian claims to parts of Macedonia were defended apparently has left an indelible impression of distrust on Bulgarian public opinion, an impression which the public declarations of the German minister and the interchanges of cordial telegrams between German and Bulgarian statesmen seem to have been unable to efface. It remains to be seen whether Emperor William's trip, declared to have been undertaken with the purpose in view, will prove any more successful.

RATIONS now allowed the German people and the civilian population of the occupied portions of northern France and Belgium, details of which have just reached the food administration, are insufficient to maintain bodily health and vigor. The French and Belgians get considerably less than the amount apportioned to the German population, and they get no meat except bacon. As announced by the food administration, the weekly ration to the Germans, stated in terms of American housekeeping, amounts to sufficient flour to bake four and one-half pounds of bread; one-half peck of potatoes; a cupful each of beans, peas and oatmeal; one-half pound of meat, twelve dominoes of sugar, six individual patties of butter and an equal amount of other fats. In northern France the weekly ration allows sufficient flour for five pounds of bread; one-fifth of a peck of potatoes; one cupful of cereals; twelve and one-third ounces of bacon and lard, and ten dominoes of sugar. Here meat, butter and margarine are all replaced by bacon and lard. The allowance of flour and cereals are slightly increased, but the allowance of potatoes is less than half the German ration, while the allowance of sugar also is reduced. The ration for the civilian population in occupied portions of Belgium is similar to that of northern France, except bacon and lard are replaced by meat and butter.

THE country faced a serious sugar shortage last week, many cities not having any supply whatever, even for immediate needs. The shortage was particularly severe in the east, but the grain belt suffered as well. The authorities believe that the situation will be relieved shortly, as 200,000,000 pounds of Louisiana cane sugar are being rushed to the north. The shortage is caused by increased shipments to the European allies and food hoarding in this country. Federal secret service agents at Buffalo, N. Y., last week reported to Washington the discovery in a Buffalo warehouse of millions of pounds of sugar in bags and barrels labeled "top crust flour." Notations on the packages, it was said, indicated that the sugar had been coming into the warehouse over a period of several months. A federal agent who made a survey of the contents of the building estimated the amount of sugar at 150 carloads, or about 10,000,000 pounds. Around immense piles of sacks containing the sugar the federal agent said he found a screen of other articles, while some of the containers marked "top crust flour" actually had flour sprinkled over the outside.

RUMORS of mutiny among German soldiers and sailors and impending revolution in German industrial circles continue to bob up every little while. An official report on conditions in Germany received in Washington last week represents the situation to be more critical than at any time since the war broke out. The report could be summarized in this manner: "Germany's population wants peace, and the people declare it will be concluded in November, because a German victory by arms is felt to be impossible of realization. German workmen, stirred to a high pitch of discontent by the socialists, boldly state that they will leave the factories necessary for the conduct of the war if the war continues during the winter. In the meantime, German workmen are demanding increases of pay and a more liberal apportionment of food. Uprisings in several parts of the empire are taking place with ever-increasing frequency. In Berlin, soldiers participated in the disorders. In one demonstration twenty-five German soldiers were counted. The Franco-English aerial bombardments of German cities and towns are increasing the dissatisfaction of the masses with the war. At Essen bombs dropped from airplanes did enormous damage, some striking a circus during a performance for soldiers, at which 800 soldiers were killed."

Bluejackets will man and naval officers will command army transports hereafter. Officials believe this will insure more efficient operation of the ships, particularly in the war zone, where the strain on a crew is greatest and so lessen the risk of destruction by submarines. Decision to have the navy operate the transports is believed to have been hastened by the sinking of the transport Antilles, manned by civilians. It was pointed out that the highly trained and disciplined naval force is far more effective than a constantly changing civilian personnel. This is regarded as particularly true of the fireroom force, upon which a ship's speed largely depends. In anticipation of this agreement, the navy has been training men especially for the transport service and a large force is understood to be available now. Others will be trained as rapidly as possible, so that not only all existing transports can be manned, but also the new ones now building. These latter have been especially designed and will be much faster than the standard cargo vessels. They are planned for a speed of at least eighteen knots. The high speed will furnish one protection against submarines, but still another will be supplied in the ships themselves. They will be so constructed as to be safe against one torpedo and it is believed that probably two would not sink them.

Apples which are stored in the cellar should not be placed near potatoes or other vegetables, for the flavor may be spoiled.

AMERICAN Radiators distribute plenty of heat without waste.

IDEAL Boilers, the greatest fuel savers and heat producers known.

Make the family happy with Ideal Heating

A small fire in the IDEAL Boiler will keep the whole house dry and delightfully warm day and night. IDEAL heating can always be run according to the weather—fuel is saved and house is kept at a uniform temperature whether outside is below zero or just drizzly and freezing. Drafts and cold spots are unknown in the house heated with an IDEAL outfit.

AMERICAN RADIATORS & IDEAL BOILERS

Made in sizes to heat the smallest cottage or the largest farm house. Water pressure or cellar not required.

Quickly and easily installed in old buildings without tearing out walls or partitions, and when put in will last for generations without repairs or over-haulings—can also be fitted with the famous Sylphon Regulator which runs outfit automatically. Temperature always uniform day and night.

A No. 1121 IDEAL Boiler and 310 sq. ft. of 38 in. AMERICAN Radiators were used to heat this farmhouse. Phone nearest dealer for estimate for your house.

Burn low priced fuels

IDEAL Boilers are made to get the greatest heating results with fuels of any locality—even screenings, slack, pea, hard or soft coal, wood, oil or gas. Farmers everywhere say that IDEAL heating is the most satisfactory, most economical, and the greatest labor saving and comfort giving feature of the home.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

PROGRESS OF FARM LAND BANKS.

I HAVE been rather curious lately to know how the federal farm loan law (concerning which I have written so often on this page) was working out, here in the grain belt. It is now about six months since the law went into actual operation, so far as obtaining loans is concerned, the time prior to that having been utilized in locating the twelve land banks and in devising the details of their administration. Along with most prospective patrons of the system, I was quite disappointed that the banks were not ready to make loans the first of March, a time when most farm obligations are made or renewed, but I look forward to next spring's proving the usefulness and practicability of the law most effectively.

I asked two of the federal land banks here in the grain belt just how the system was working out; choosing the northernmost and the southernmost bank, so as to be representative of the entire section. Mr. H. K. Jennings, secretary of the bank at St. Paul, which loans to farmers in Wisconsin, Minnesota, North Dakota and Michigan, advises me that up to October 1st that bank had received applications for loans in the sum of $15,896,700, and of that amount $7,423,600 had already been approved. I turned from Mr. Jennings' letter to the census report which I keep ready to my hand and I found that the farm-mortgage indebtedness of these four states, at the last federal census, amounted to $348,520,213. It took only a minute's figuring to show me that in the first six months of the new law's workings loans had been applied for to the extent of 4½ per cent of the total farm-mortgage indebtedness. At this ratio, by the time a year of actual operations has passed, almost one-tenth of the farm mortgage loans will be in process of transfer to Uncle Sam's new system, under which farmers obtain money at 5 per cent interest, for any term of years, ranging from five to forty.

This St. Paul report is duplicated by the one which comes to me from Mr. O. J. Lloyd, secretary of the federal land bank at St. Louis, which loans to farmers in Illinois, Missouri and Arkansas. Mr. Lloyd states that they have applications to the amount of $8,428,615, of which $3,500,000 has already been approved. Once more I turned to the census report, to find that the farm-mortgage indebtedness of these three states amounted, at last reports, to $237,306,381. Four per cent of this grand total has already been applied for under the new system. I believe we are safe in saying, the grain belt over, that loans are being asked to such an extent that, by the end of the first twelve months of actual loaning, practically one-tenth of the farm-mortgage indebtedness will have been transferred from insurance companies, banks and private investors to Uncle Sam's new land banks.

When we come right down to it, this is a splendid start and augurs well for the success of the system. People are always a bit slow to try a new thing; particularly when it is bound about by as much red tape as encumbers this new financial system. But I believe we have gone far enough already to verify my prediction that the new system is a success, that it affords a considerable measure of relief to farmers and will be eagerly taken advantage of by them.

CHARITY IN THE FARM HOME.

I HAVE always contended that country folks were more sympathetic, more charitable, than city people. There is room in the country for the sympathies to expand. There is not the frequent repetition of need to dull the sensibilities. There is an air of wholesomeness about country life which is lacking in the cities, and this wholesomeness affects the minds and spirits of the people.

I have had folks argue with me that farmers were slow to be aroused to the needs of the less fortunate, that they could not realize (living, as they do, in the midst of plenty) the suffering which existed elsewhere. I do not believe this. I know that no worthy cause has ever been presented by me, to the farmers who do me the honor to read what I write, without their response being prompt and generous. The trouble all too many city folks make is in not explaining the needs plainly enough to the men and women of the country whose aid they wish. They seem to think that all they have to do is to ask for charity and it will be forthcoming. This is a grievous mistake. We have systematized our charitable work nowadays, eliminating the unworthy and the unscrupulous. An appeal which cannot be explained and its merit proved, so that all will understand, is not worth heeding. But whenever a worthy cause is made plain to the folks of the country the response is immediate and generous to the limit of ability.

I do not know just why these thoughts have been coming to me, over and over again, the last few days. Perhaps it is because we are rapidly approaching the season of the year when the waste on our farms would feed many a hungry home in the city. Perhaps it is because the tales of heroism and suffering and sacrifice in the war are making us all a little more tender hearted, bringing the tears a little closer to the eye. The nation's heart beats quickly these days; we are all of us touched by emotions which have lain dormant in many for long years.

Perhaps, after all, unconsciously, I began to think over this subject after I read the splendid letter which a subscriber at Kanawha, Iowa, Mr. Irwin Anderson, wrote to me a few days ago. I am going to reprint this letter, without telling him about it, for I believe that it will open the eyes of many of us to the fact that whatever our lot in life we can help those who are less fortunate, that the possibilities of relieving suffering are present in every country home, no matter how humble. Mr. Anderson wrote:

Dear Mr. Pierce: I have been an interested reader of your good paper for some time. I am taking the liberty of asking a favor of you. Do you know the address of any charity organization which would accept some outgrown clothing? I have several pieces of children's garments that are of no use to me. We are poor people, so have nothing fine, but have seen the time such garments would have been very acceptable to us and I think they would be to others if I only knew who they were. I hope you may be able to give me this information.

I gave Mr. Anderson the names and addresses of several worthy organizations which will be only too glad to receive and to distribute this clothing. It may be the means of saving the lives of some little ones this winter, of cutting down the dread ravages of pneumonia, of shutting out the biting wintry winds from some little body. This, my friends, is real charity, the charity which will make the Recording Angel write the name of the giver high up on the celestial roll of honor. Charity does not consist alone in giving millions; the pennies oftentimes do as useful a work, judiciously distributed. A boxful of outgrown clothing from this farm home may do as much good, may relieve as much suffering, as anything John D. Rockefeller or Andrew Carnegie have done with their millions for a whole year past. I am proud that this family turned to me when they thought of the good they might possibly do. I am honored to be an agent in the relief of suffering. If I can serve others of my readers in a similar fashion I shall be pleased, indeed.

A MAN WHO LOVES NATURE.

IT HAS been several weeks since I last quoted from David Grayson, whose writings on homely rural topics I enjoy so much. I thought perhaps some of you might be tiring of Grayson, but I judge from the numerous letters I have received that none of you are. So I am going to quote a wee bit from him again this week; his last article in the American Magazine is too good to keep from you.

I often wonder if we who associate daily with Nature appreciate her enough. Some of her manifestations come, in time and through familiarity, to appear almost ordinary. We become so accustomed to the miracle of the seed and the harvest; to the artistry of the golden autumn leaf and the burning sunset; to the kaleidoscope of color and form and substance which Nature holds before our all too often unappreciative eyes. I believe that it is well now and then to turn from the visible contemplation of Nature's marvels to the written description of them; to read something that Ruskin or Grayson or some other nature lover has written, expressing in eloquent words the formless thoughts in our own minds. That is why I quote so often from David Grayson. He is not describing anything new, anything you and I have not seen. It is not as though he were picturing a newly found people in the heart of Asia or the wonders of Mars; he is telling us what we can see every day from our backdoor stoop, as we walk through furrow and feed lot, if only we will keep our eyes open. But it was Grayson I started out to quote, not myself, so here is the selection from his recent article in the American Magazine that I want you to enjoy with me:

Of all places in the world where life can be lived to its fullest and freest, where it can be met in its greatest variety and beauty, I am convinced that there is none to equal the open country, or the country town. For all country people in these days may have the city, some city or town not too far away; but there are millions of men and women in America who have no country and no sense of the country. What do they not lose out of life!

If one has drained his land, and plowed it, and fertilized it, and planted it, and harvested it—even though it be only a few acres—how he comes to know and to love every rod of it. He knows the wet spots, and the stony spots, and the warmest and most fertile spots, until his acres have all the qualities of a personality, whose every characteristic he knows. It is so also that he comes to know his horses and cattle and pigs and hens. It is a fine thing, on a warm day in early spring, to bring out the beehives and let the bees have their first flight in the sunshine. What cleanly folk they are! And later to see them coming in yellow all over with pollen from the willows!

It is a fine thing to watch the cherries and plum trees come into blossom, with us about the first of May, while all the remainder of the orchard seems still sleeping. It is a fine thing to see the cattle turned for the first time in spring into the green meadows. It is a fine thing, one of the finest of all, to see and smell the rain in a cornfield after weeks of drouth. How it comes softly out of gray skies, the first drops throwing up spatters of dust and losing themselves in the dry soil. Then the clouds sweep forward up the valley, darkening the meadows and blotting out the hills, and then there is the whispering of the rain as it first sweeps across the cornfield. At once what a stir of life! What rustling of the long green leaves! What joyful shaking and swaying of the tassels! And have you watched how eagerly the grooved leaves catch each early drop and, lest there be too little rain after all, conduct it jealously down the stalk where it will soonest reach the thirsty roots? What a fine thing is this to see!

So much of the best in the world seems to have come fragrant out of fields, gardens and hillsides. So many truths spoken by the Master Poet come to us exhaling the odors of the open country. His stories were so often of sowers, husbandmen, herdsmen; His similes and illustrations so often dealt with the common and familiar beauty of the fields. "Consider the lilies how they grow." It was on a hillside that He preached His greatest sermon, and when in the last agony He sought a place to meet His God, where did He go but to a garden? A carpenter, you say? Yes, but of this one may be sure: There were gardens and fields all about; He knew gardens, and cattle, and the simple processes of the land; He must have worked in a garden and loved it well.

Is that not fine, indeed? Is there not a freshness, an honesty, an appreciation of farming as the most noble and useful of professions in every word that Grayson writes? I like a man who can look about him on the things which are common, because of their frequent appearance and repetition, and make them appear as splendid and attractive as the unseen things of the imagination half the world away. What agriculture lacks nowadays is men of spiritual and mental vision, with power to ennoble country life in words and pictures so as to appeal to those who having eyes see not, who having ears hear not. I would be glad and proud, indeed, if I could do my little bit. Sometimes I wonder if a little that I write here on this page of mine may not perhaps be accused of being sentimental and impractical, of being a bit visionary, in fact. But when the letters come in to me—as they do so often—telling of some good that a little preaching of mine has done in some farm family, of ideals uplifted and ideas re-created, I think, perhaps, we need a little of this kind of farm teaching, as well as the more practical, workaday sort. One favor I have to ask of my readers, and that is this: Write me what you think of the subjects I discuss and the manner in which I treat them, suggest subjects to me, make this page yours as well as mine. In that way—and that way only—can we attain the real, working coöperation between publisher and reader which is my ideal.

FARM BOYS IN ARMY CAMPS.

A WEEK or two ago I promised to write an article descriptive of the manner in which the boys from the farm are being treated in the army cantonments here in the grain belt. I have visited two of these cantonments and have received reports from the others. The subject is a large one; I shall do the best I can with the limited time and space at my disposal.

To begin with, I do not believe that any farm mother or father need worry about the three most important things: Health, comfort and morals. Their boys are being well looked after. Conditions will improve as time passes, but, really, my friends,

(Concluded on page 15.)

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES.

BY JAMES M. PIERCE

JAMES ATKINSON, EDITOR-IN-CHIEF

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter.

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address THE WISCONSIN FARMER, Madison, Wisconsin

Wisconsin Implement Convention and Show.

A convention of considerable interest to farmers will be held at Milwaukee, December 12th, 13th and 14th. We refer to the annual convention and Implement Show to be held in the Milwaukee auditorium under the direction of the Wisconsin Implement and Vehicle Association. The exhibit of farm machinery at this meeting will be complete in every detail. In fact, there will be an exhibit of practically every sort of tool and implement which is used on the farm. The manufacturers of up-to-the-minute machinery have gone to considerable trouble to arrange for this exhibit and it is a splendid opportunity for farmers to look over their wares. F. R. Sebenthall, of Eau Claire, secretary of the association, advises us that all available space in the large auditorium has been spoken for. The high prices of farm implements will, of course, be a topic of great interest and the dealers of the state want to hear from the manufacturers on this subject and learn what these manufacturers have to say to justify the advance. One-half day during the convention is to be devoted to community building and increased farm production and one session will be a patriotic session with Hon. J. M. Whitehead, of Janesville, as speaker, representing the League to Enforce Peace. Mr. Moon, of Chicago, former general store owner in northern Indiana, and Mr. White, representing the Agricultural Publishers' Association, have consented to appear on the program. Every effort possible will be made to make the sessions not only profitable to the implement dealers, but to their visiting farmer friends as well. Mr. Sebenthall writes The Wisconsin Farmer as follows:

The farmers of Wisconsin are invited to attend the exhibitions at Milwaukee and also the sessions during the convention as the programs will be prepared to include such important topics as "Service From the Dealer" and outline policies for assistance that can be rendered to our farmer customers in helping to win the war by intense farming and increased production.

The editor of The Wisconsin Farmer enjoyed the sessions at Milwaukee last year and we hope that many of our readers will take advantage of the opportunities afforded by this convention and exhibit.

Wisconsin Farm Home Contest.

The farm home contest conducted during the summer months by the college of agriculture with a view of gathering the best ideas relative to farm home architecture came to a close some weeks ago, but the winners have just now been announced. The winning plans were chosen on the basis of making the home attractive and cozy without increasing materially the cost of the building. Saving steps for the housewife was one of the important factors the judges considered in making their awards.

The leaders of the contest as announced by the judges were Miss May L. Cowles, Madison; Helen H. Bennett, Interlaken, New York; Florence L. Kennard, Madison; Vera Lubeno, Trevor; F. J. Forward, Berlin; Mrs. Phebe W. Sawtelle, Madison; Russell Williamson, Spring Green; Mrs. F. F. Bowman, Madison; John Ostrander, Albany, and R. B. Chatfield, Weyerhauser.

A total of seventy-two separate house plans were considered by the judges in choosing the ten prize winners. The judges for the contest were Mrs. James Z. McLay, Janesville; Mrs. W. J. Dougan, Beloit; C. I. Griffith, department of agricultural engineering; Miss Amy L. Daniels and Miss A. L. Marlatt, department of home economics, University of Wisconsin.

Only men and women who were living or had lived on a farm were allowed to compete in the contest. The best ten plans will be used to obtain ideas for the building of the new farm home demonstration cottage, which is soon to be erected on the campus at the college of agriculture, Madison. This cottage will serve as a special place of study in household management and home planning for the home economics students. The building has been approved by the board of regents of the university and a committee consisting of President Van Hise, H. J. Thorkelson, Arthur Peabody, state architect, and Dean Russell, of the college of agriculture, will soon decide upon a favorable location.

The materials for the new cottage will all be donated if present plans do not fail. The Northern Hemlock and Hardwood Manufacturers' Association and the Portland Cement Association will furnish all the material for its general construction. Leading manufacturers of household equipment will help in fitting this building into a practical illustration of what a modern farm home can and should be without unnecessary expense.

Wood from the forests of Wisconsin will be used in the structure throughout. Where durability is expected and recommended cement will be used.

The interior of the cottage will be on plain and sensible lines. Furnishings and equipment will be for comfort as well as the saving of labor. The college of agriculture has secured the services of A. B. Roush, formerly with a commercial concern, who will in the future answer all inquiries on farm home planning.

Hog Fat as Important as Bullets.

According to Food Administrator Hoover, every pound of fat is as sure of service as every bullet and every hog is of greater value to the winning of the war that we are now waging than a shell. Mr. Hoover points out that in view of the European situation and the American shortage in hogs there is sure to be a high average price paid for pork products during the coming year and this should be assurance to stockmen that prices will be sufficiently high to make swine raising profitable.

In this connection it is interesting to consider the relation of cash revenue from the grain and the profit from hogs that have been fed on high-priced grain. The Iowa Agricultural College reports the case of J. D. McCray, who started out last spring with 105 pigs. Some of these pigs were of March farrow, some April, and others were farrowed in May. These shoats were sold recently at $19 per hundred and they averaged 227 pounds. It should be added that twenty-five of the lighter ones sold for $18.50 per hundred.

From May 23d to October 4th, the date of sale, they consumed 912 bushels of corn and forty sacks of tankage. This means that each shoat consumed practically eight and one-half bushels of corn and thirty-eight pounds of tankage. With corn at $2 a bushel and tankage at $4 a sack the total cost of the feed was $1,983.96. The pigs sold for $3,781.80. The difference between the selling price and the cost of the feed used between May 23d and October 4th amounted to $17 per head. This does not mean $17 profit, because there is not charged up against this account the cost of wintering the sows and their spring feed and care up until May 23d. The total weight of the pigs was 3,180 pounds on May 23d and at 19 cents a pound they would be worth $624.20. Subtracting this from the gross item as well as the feed bill we find that there is left a profit of $1,193.36, which is a little more than $11 per head. In addition to the grain these 105 pigs had access to six acres of alfalfa and if there is a deduction of $20 per acre for rent there still remains a profit of $10 per head.

This record was made under farm conditions and what one man can do with a healthy bunch of hogs another ought to be able to accomplish if he follows up-to-date methods. Feeding operations of the present time have been carried on largely with $2 corn, and here is a case where quite a satisfactory profit was realized on hogs sold at $19 per hundred.

We believe that the stockmen of the Central West are aiming to produce the pounds of fat and meat products that are now considered even more important than bullets and it is expected that the food administration will use its influence to see to it that no condition shall arise that will knock the bottom out of meat prices after the product has been made ready for market as the result of feeding high-priced grain.

Standardizing Wisconsin Farm Products.

E. L. Luther, superintendent of Wisconsin Farmers' Institutes, has contributed to a bulletin on the subject of standardization of products and this bulletin has been distributed by the Wisconsin Bankers' Association. In his bulletin Mr. Luther calls attention to the fact that many counties in Wisconsin valued at $20,000,000 exclusive of city valuations, enjoy no reputation for any product of sufficient superiority to entitle this product to a special market. Mr. Luther very rightly says that any manufactured product produced on such an extensive scale would be well-known all over the country. We quote from Mr. Luther's bulletin:

Suppose we had a factory valued at that much with 3,000 or 4,000 workers in it, each one of whom was free to turn out, according to his fancy, the product or products which the factory manufactured. If that were an implement factory, farmers would be unable to get two machines alike from that factory; the workableness of one machine would be no guarantee of another, and in disgust with factory-made machinery farmers would be using homemade rakes, forks, cradles, scythes and so on. The great factory would be a failure. It would have an impossible marketing problem on its hands.

So it is with agricultural production. The 3,000 farmers of a county often produce what the fancy of each one permits. Imagine the varieties of products and the various grades of quality of what he may be able to secure tomorrow. Farmers complain of their markets. Do you see why?

In the matter of live stock Mr. Luther finds that many inquiries are made for carload lots of certain types and breeds. He knows of a hundred inquiries along this line since March, 1917, and this points to the fact that there is a great market for the right type of dairy cattle. But at the same time a great majority of our farmers are still using scrub cows and grade bulls. Now if every farmer in Wisconsin would use a pure-bred bull of any one of the great dairy breeds, the production of live stock along dairy lines would approach standardization and all parts of Wisconsin would be receiving these inquiries for pure-bred stock. As it is now a community which is organized and becomes known for producing a given quality of stock gets the business and the rank and file of farmers who have just "cattle" to sell get no orders. Mr. Luther suggests the following:

Live Stock—Township breeders' organizations to use pure-bred sires of but one breed.

Cow Testing Associations—To produce only high producing dairy stock.

Tuberculosis — County organization under the new Wisconsin law makes it possible to clean up tuberculosis in whole communities.

These three moves will give us standard stock of a breed, high producing and disease-free.

While our creameries and cheese factories are getting closer to standardization of their work, Mr. Luther says we are still far removed from uniform quality and this is due to the fact that milk production is carried on under so many varied conditions. Community organization of milk production is needed and this writer suggests such improvements as high-producing cows kept in well-lighted and well-ventilated, clean barns, turned out into clean yards, fed upon hay free from weeds and upon silage free from ragweed, grazed in pastures free from weeds, milked by milkers who carefully groom themselves, and the milk handled by those who are careful with all utensils and separators and see that they are washed with each use. A dairy community should be organized so that these things are properly looked after and prevent one or two careless or indifferent persons from mixing in their product and making the whole second or third grade.

Mr. Luther says the potato growers of this state should become even better organized than they are and that farmers of whole communities should organize to produce a community crop of uniform quality. The southern states will take large quantities of northern-grown seed, but this seed must be certified, variety pure, disease free and graded.

This same system of organization should be carried out in the production of grains so that whole communities should raise pedigreed varieties. Communities should be organized for corn production so that our standard Wisconsin varieties of seed would not become crossed and would be well selected and kiln dried. Farmers' societies and coöperative enterprises will find it much easier to market a standard crop of known quality.

National Holstein Meeting.

The 1918 meeting of the National Holstein Association will be held the first week in June at Milwaukee. At a special meeting of the society held in Columbus, Ohio, during the National Dairy Show, this decision was reached, but not without considerable discussion. The final vote of the directors was five for Milwaukee and four for Waterloo, Iowa. By rights Wisconsin should have more of these national meetings. Our position in the dairy world entitles us to this recognition. In connection with the meeting at Milwaukee next June will be held a sale which will undoubtedly attract attention of breeders all over the world. At the sale held this year one bull calf brought the highest price ever paid for any animal. This is only an indication of the class which we are getting into. Holstein breeders throughout Wisconsin should lay their plans to attend the next meeting of their national association in Milwaukee. There is no doubt about Milwaukee taking care of the crowds in good shape. Now that Wisconsin has gained this recognition from the Holstein breeders the next step is to get the National Dairy Show for 1918. Surely Wisconsin would give the show better local support than it received at Columbus, Ohio, this year.

Breeding Ewe Lambs.

Because of the scarcity of sheep in this country and the tremendous demand that exists for mutton and meat of all kinds, in fact, well-informed, practical sheep men are recommending the breeding of all well-developed ewe lambs dropped in April or May. While this plan is not to be recommended as good practice from year to year, it is thought to be desirable so long as the sheep population must be increased as rapidly as possible in order to meet the demand for mutton in this country and abroad.

It isn't necessary, of course, to breed these lambs early in the season, but it is better to defer breeding as late as may be practicable, thus giving them a little more time to develop. The old and mature ewes can be bred early and the lambs a little later, thus prolonging the lambing season to a certain extent. Not all lambs will become pregnant, but from 70 to 80 per cent of them will if a ram is allowed to run with them when the proper time for breeding arrives.

In order that these young females may not have their growth seriously interferred with because of early breeding, it will be a good plan to feed them a little more liberally from now on than will be necessary with mature breeding stock. A little grain will be especially desirable during the winter season to keep them in a thrifty, growing condition. When breeding young stock that has not yet reached maturity, the fact must not be overlooked that more feed will be required per hundred pounds live weight than for mature animals, because allowance must be made for growth. When the dam must take care of its own body growth, as well as that of its fetus, one can readily see that it will need more feed than if its body were fully developed before breeding.

Family Circle Talks by the Publisher

(Continued from page 3.)

the government has done wonders in the short time it has had to prepare for these thousands of boys and men from city, town and farm. There was no precedent to go by; it was all in the nature of an experiment. Considering the drawbacks, I think the results so far achieved are splendid.

The soldiers are comfortable and healthy. There was delay, when the first contingents arrived, in securing uniforms, but that has been remedied. So far as I have observed, or can learn, every soldier now in camp has been provided with uniform and overcoat. Sometimes these clothes do not fit perfectly, but what does that matter; they are made of good, heavy, serviceable cloth and they are warm. The overcoats are regular ulsters, coming clear down to the men's feet, which are encased in good, sound, serviceable shoes, far better shoes than many of the men (both from farm and city) wore before Uncle Sam took to looking after them.

Not enough blankets have been received, in view of the unseasonable cold snap of last week, but I am informed that they are on the way and will reach all of the camps before zero weather comes. Nor are all the barracks heated as yet. Furnace heat has been furnished to only a few of the buildings, but some of the cantonments have supplied the deficiency with stoves. From Fort Funston the word comes to me that many of the barracks are as yet entirely unheated and the men are obliged to go to bed, at all hours of the day and early at night, in order to keep warm. There is no better commander in all the country than General Leonard Wood, who is stationed at Fort Funston, so I am sure this condition of affairs will be remedied as soon as possible.

The farm boys have an advantage over the city boys in the matter of health, for, as a general rule, they are stronger, more accustomed to outdoor life and better prepared for the army work. Naturally, there are cases at the camp hospitals; many cases at some camps. I know of one of these cantonments where something like 25,000 soldiers are now quartered. Last week there were about 500 men in the hospital. But most of these men were suffering from simple colds. The hospitals are well heated and the men stay there in preference to their cold or half-heated barracks. Even this is not a bad showing, for 25,000 men mean the equivalent of a town of 50,000, at least (counting the women and children in the ordinary city), and 500 cases of sickness, most of them light cases, with the patients simply staying at home from work or school, would not be many in a city of that size. There have been but one or two deaths, at most, at any of the camps. In all probability, there would have been as many fatalities, among as many thousands of men, at home. There are good doctors and surgeons at each camp. Uncle Sam needs strong men; he is going to do all that he can to conserve the health of those he has, rely on that.

Some of the men at these army camps complain of the food; most of the complainers are city boys, who miss their fancy dishes. The farm boys are pretty well satisfied, as a rule. There is plenty of good, wholesome, body-sustaining food. Many of the army cooks are new to the business; they send the potatoes to the table half done, at times, and the meat overdone. But they are learning quickly. The fare is substantial; lots better than many families, both in town and country, enjoy as a general rule. The soldiers lose no time, on their days out, in buying cake, pie, cookies, candy and other delicacies which they do not obtain enough of, to suit them, in the regular army fare, but this is the habit of young men the world over, in times of peace or war. There never yet was a college boy who did not raid the boarding house pantry or buy a "swell feed" at some restaurant every time he got the chance—and the money.

The men are allowed two afternoons off each week, being free to go to town or do whatever they choose, provided only that they report back on duty at a stipulated hour. Most of them go to the nearby town or city, attend theaters, shop, play pool, visit the movies or otherwise enjoy themselves in a perfectly normal and healthy fashion. The best of order is invariably maintained. Practically none of the big army camps of the nation are located near any town or city where intoxicating liquors are served, and there is little bootlegging going on. The social evil is an ever-present one, but greatly exaggerated. Most of the cities where the army camps are located have provided community and recreation centers, Y. M. C. A. reading and rest rooms and various other places where amusement may be had or young folks of the opposite sexes may meet and pass the hours. Morals matrons are provided in practically all the army camp towns and military police assist the regular city force in keeping order. I believe the social evil is grossly exaggerated. The soldiers are leading clean, upright lives in camp, just as they would at home; donning Uncle Sam's uniform has not changed their nature in this important respect.

The men are busy and, for the most part, happy. Here is their daily routine, as outlined to me by an officer in one of the large camps:

Monday, eight hours of drilling and one of physical exercise; at night, the Y. M. C. A. or an evening in barracks.

Tuesday, one hour of physical exercise and eight of drilling; at night, the barracks or the Y. M. C. A.

Wednesday, eight hours of drilling and one of physical exercise; at night, the Y. M. C. A. or barracks.

Thursday, one hour of physical exercise and eight hours of drilling; at night, the Knights of Columbus for a change, or the Y. M. C. A. or barracks.

Friday, the same.

Saturday, inspection, drill and the afternoon off.

Sunday, church and the rest of the day off.

Services are provided for Protestants and Catholics impartially; there are chaplains to look after the men's spiritual welfare, as well as doctors to look after their physical welfare.

I firmly believe that there is little for the farm mother or father to worry about, as yet. Once the men are trained and sent over to France it will be different, but so far the work lacks danger and can hardly fail to benefit the vast majority of the men, both physically and mentally. The other night some 4,000 of these new soldiers marched in review before ex-President Taft. Four weeks ago not one of the 4,000 had a uniform; 99 per cent of them had never drilled a minute. Yet they marched with the precision and efficiency of regulars; it made the tears come to my eyes to see how splendidly they are learning. Almost one-half of those boys came from the farm. Their heads were erect, their eyes bright, most of them smiled as the crowd cheered them to the echo. Mothers and fathers of the farm—your boys in the army camp are all right; remember them in your prayers, keep a stiff upper lip and pray to God that peace may come before they must go abroad to make the great sacrifice.

James M. Pierce

ELEVENTH NATIONAL DAIRY SHOW.

(Continued from page 1.)

tion in the world. There were those, of course, who disagreed with President Van Norman, and who insist that our dairy farmers are committing little short of a crime in running perfectly good high-priced feed through a cow which cannot produce enough milk to pay for her board. But there are always advocates of both extremes of any situation. The fact remains outstanding that killing dairy cows for beef is a sacrifice which neither the dairyman owner, nor his harassed government can at this time afford. There are approximately 22,500,000 dairy cows in the United States. This seems an immense number. But reliable estimates say that practically the same number have been slaughtered in Europe since this war started. Plainly during the present war, and undoubtedly for a long period following the war, we must be an export nation in such commodities as butter and cheese. Furthermore, when peace is declared, Europe will be obliged to rush into grain farming to produce food, and it will take a number of years to build up the dairy business to the extent that she can supply her own milk and dairy fats. Just at this time we are an enormous exporter of condensed milk, and this business bids fair to increase. In 1913 the United States exported 16,000,000 pounds of condensed milk, a relatively small amount when we consider the immense milk production of the country. But in 1916 the exportation of condensed milk had increased to 160,000,000 pounds, and 1917 will beat that record. Prior to the war about 1 per cent of the milk of this country was condensed, the figure of 1904 being 6,000,000 cases. In 1917 this had increased to 20,000,000 cases, an increase of 2 per cent of the raw milk of the country. And this tremendous increase has been recorded when local consumption of condensed milk, because of the high price, has decreased. The figures on the increased demands for butter and cheese are enormous, and this demand will increase so long as the war lasts and probably many years longer. As nearly as can be judged at this time there is nothing that can stop the increasing demand for dairy products except it would be the loss of so many ship bottoms that transportation of the products across the water would be impossible. With the demand for breeding stock which will come after peace is declared, and the United States is called upon to help replenish the slaughtered herds of Europe, there appears to be not the slightest chance that the dairy business will be overdone. For at least a decade, our best-posted men all agree, there is no possibility of producing too much butter fat, too much raw milk or too much butter or cheese. And this leads us to the question of prices for dairy products which at this particular time has been brought to public attention by the activities of the milk producers' associations of several states.

Everyone recognizes the enormous demand for milk and for the products of the dairy and everyone recognizes the high prices of feeds and the shortage of dairy cows. One authority has said that 26 per cent of the dairy cows of the country have been killed for beef since the war started—an almost unthinkable situation and one which should be remedied at once. But in handling this proposition we cannot overlook the man who owns these cows. He has money invested, labors from before dawn until the sun passes beyond the western horizon, and he battles with this high feeding cost problem. Of late years this farmer-producer has said that he has a right to organize and that his organization has a right to take all the production costs into consideration and to say what shall be a fair price for milk. The government—at least some of the representatives of the government—have said that such organization and such agreement to fix prices are unlawful, and these farmers have been spoken of as belonging to a new and monstrous trust, which proposes to abuse its powers by grinding high prices out of the public. Farmers have been classed as criminals by a city press which knows less about cost of production and distribution of milk than the devil knows about what transpires inside the pearly gates. On the program at Columbus was Milo D. Campbell, of Coldwater, Michigan, president of the National Milk Producers' Association. Officials of the government and of the National Dairy Show Association thought enough of Mr. Campbell to make him chairman of the conference on dairy marketing. If the government should decide to send all farmers in the country like Campbell to jail it would be necessary to build jails with capacities greater than the present army cantonments. Mr. Campbell's face and manner, even if one had not heard his speech, would clear him with any jury in America. We have it direct from Mr. Campbell, his own signed statement, read in the presence of government officials and men prominent in all lines of the milk industry, that the farmer milk producers of this country want just one thing—enough money to cover the cost of producing good milk, and a fair profit added. The farmers are willing to go even farther than that. They are willing to agree that the government shall investigate and determine the cost of producing milk, and that the representatives of the people in legislative bodies and the courts shall accord to dairymen just the same percentage of profits that they have said is just for other industries. This is no time, in the judgment of Mr. Campbell, for profiteering, either in milk or any other article. The National Milk Producers' Association cheerfully and patriotically bows to the x-ray of government investigation, asking that investigations be based wholly on the cost of doing business and a reasonable profit. Farmers believe that they have a right to organize. They have been criminally prosecuted because they have approached the subject and object of coöperation with less finesse than some other classes of society. But Mr. Campbell insists, and we believe he speaks the truth, that the farmers who produce milk are not criminals and have no intention to defraud. A marked change has occurred in the demands made upon farmers who produce milk. As Mr. Campbell expresses it, "they pile expenses on us and then want us to sell milk at the same old price." City boards of health have demanded a bacteria count, made by white-aproned and spectacled accountants. They expect the farmer to wear a white duck suit when he milks and "Bess must have a bath before she is approached with the milking stool and pail."

Housewives expect to get a bottle of milk or cream on short notice and they reserve the right to change their minds and also to break up one-sixth of the bottles used, and still think that these rights should not add anything to the cost of milk. In short, Mr. Campbell made his case so simple and plain, and he spoke with such evident feeling of patriotism that no one who heard him could imagine him or his associates a criminal class. If this is the type of men who make up the Milk Producers' Association, we have no fear of unjust milk prices.

But there was some sentiment in the Dairy Marketing Conference against the milk producer and some feeling that the power of organization has been misused and abused. President Van Norman, to whom we have referred, remarked that new-found power has always begotten abuses and that organizations which become drunk with such power have been compelled to submit to governmental regulation. The railroads and the labor unions were given as notable examples by President Van Norman. In the opinion of the speaker dairymen must recognize that there is a price which is reasonable. People will not pay a dollar a pound for butter, even though through organization power it might be possible to force the price to that figure. The market can be

"milked" too strong. Thus we find the oleomargarine business springing up and increasing at the rate of 100,000,000 pounds a year. In 1915 there was consumed in this country 150,000,000 pounds of oleomargarine, and in 1916 this had increased to 250,000,000 pounds. The consumption in 1917, according to present estimates, will reach 350,000,000 pounds.

Another subject of interest is waste in distribution of dairy products. Mr. George E. Haskell, of Chicago, president of the Beatrice Creamery Company, and an associate of Herbert C. Hoover in food administration, a man who has been donating much of his time free to the government, gave a mass of figures on costs of creamery operation. In brief, he says the present system of too large a number of creameries serves to rob the producer of just prices for his product and also to tax the consumer. The cost of operation of creameries located only a few miles apart is very high, compared to cost of operating fewer creameries with larger output. We refer to the cost of making and marketing a single pound of butter. Mr. Haskell n t only admits that the dairyman should receive more for his milk, and that the losses in manufacturing costs, in making butter, should be divided between the consumer and the producer, but he says the great increase in milk production which is absolutely necessary to keep up our food supply, must come from that section of the country where dairying is now incidental. This means that the increase must come in states like Iowa, Missouri, Kansas, Nebraska and the Dakotas, where the feed supply is normally heavy and the present number of cows per farm is small. We can expect some increased production in Wisconsin and northern Illinois, but these sections are producing a large per cent of the market milk in the West, and the urban population is increasing and will continue to increase more rapidly than the increase in volume of milk produced. Mr. Haskell believes that competition in milk buying in creamery districts should be eliminated to effect low cost of collection and distribution, and that manufacture of milk products must be concentrated.

GRAND CHAMPION HOLSTEIN BULL, OAK DE KOL OLLIE HOMESTEAD, OWNED BY IOWANA FARMS—NATIONAL DAIRY SHOW, 1917.

MINERVA BEETS, OWNED BY R. E. HAEGER, ALGONQUIN, ILL., GRAND CHAMPION HOLSTEIN COW.

SCENE IN ONE OF THE MACHINERY HALLS AT NATIONAL SHOW.

A comprehensive view of the cheese industry as it exists today was given to assembled farmers at Columbus by L. E. Carpenter, of the Phoenix Cheese Co., New York. Mr. Carpenter is a farmer and a cheese manufacturer. He expects cheese to continue at the present high level of prices. He estimates the world's losses in dairy cattle at 20,800,000, which is about one and a half million less than the number of dairy cattle in the United States. Others estimate European losses considerably higher. Factors which tend to increase cost of cheese-making are increased cost of feed, which gained 25 per cent from 1910 to 1914, and has increased another 40 per cent since 1914, increased value of cows, increased demands, especially for export, increased cost of labor and increased cost of upkeep of dairy cows. As an example of the reduced supply of milk in France, Mr. Carpenter quoted from a report which shows production decreased from two and a half gallons per capita before the war, to one gallon per capita at the present time. Furthermore, Mr. Carpenter says too many farms are passing to tenants, who do not farm effectively or economically, and who fail to raise enough grains, ensilage and roughage. The cheese industry has been hurt by the high prices of fluid milk. For instance, in 1912 fluid milk sold in New York for $1.70 per hundredweight, and milk sold to cheese factories netted $1.62 per hundredweight. To be sure, the farmer could make use of the whey from milk delivered to the cheese factories, but the experience is that only a few of them do so. Some authorities now claim that at present milk prices whey is worth 45 cents a hundredweight to feed to hogs. In 1913 fluid milk went to $1.90 in New York, and milk made into cheese netted only $1.50 per hundredweight. In 1914 fluid milk again brought $1.90 in New York and in cheese factories netted only $1 42. In 1917, date of October 1st, fluid milk sold for $3.25 in New York City and brought only $2.47 when made into cheese. Mr. Carpenter rapped the milk producers' organizations, and said that they are forcing milk too high. Present prices of milk, as urged by the producers' organizations, according to Mr. Carpenter, will make it necessary to charge such a high price for cheese that the consumer will take cheese off his bill of fare. The day of cheap cheese is a thing of the past, and only the present export trade is serving to keep up the demand.

Coöperation was the chief topic of the meetings held during the dairy show. J. P. Morley, of the Minnesota Coöperative Dairies Association, advanced ideas which set the farmers to thinking. Out of 2,014 coöperative associations in the state of Minnesota all but three are farmers' organizations. In all the efforts which have been made by the several states and the federal government to advance the general aims of coöperation, little has been done to promote coöperation among the consumers. The question arises, why this great movement, believed by many to be the ultimate salvation of high costs, should be confined so strictly to the producers. If the producer can coöperate to reduce producing costs, why cannot the consumer coöperate to reduce buying costs? Mr. Morley represents an association which handles the product of coöperative creameries. This association carries its butter directly into the Chicago and New York markets independent of the usual selling agencies and deals directly with retailers

GAMBOGE VELLUM MAJESTY, OWNED BY M. D. MUNN, ST. PAUL, GRAND CHAMPION JERSEY BULL.

At Last!

AT last! A perfect milking machine. Readers of the Iowa Homestead are hereby informed that, at last, they can get a milking machine that does the work safely and does it right. Those old objections to milking machines are now eliminated. This machine is

Shippert's Valveless

Hand Milker

Run by hand—just the thing for the farmer with 6 to 60 cows.

A child can run it—not as much work as pumping water — saves expense of power milkers — absolute simplicity. Controls like the hand—different for each cow. Just takes the milk out—*valveless!* The *milking machine question solved!*

Introductory Offer!

Dealer's discount direct to you:—price, for two units, $84.75—that's all for two units. *Not one cent of installation expense. Total cost of complete outfit—$84.75!* ⅓ the price of others not as good. (Six months to pay if desired.)

30 Days' Free Trial!

Not a bit of obligation if you don't like the machine after the trial.

Write, For My Personal Letter!

explaining how I came to invent this machine; how, after working over cows for years, I hit upon the principle that's absolutely right.

It is high time now for the progressive farmer to *investigate* the milking machine question. My personal letter explains.

in these large centers. Mr. Morley has felt for several years that coöperative societies should carry their work one step farther. He thinks that producers in the urban centers should be urged to run small coöperative stores in many parts of the cities, and that these small stores should be owned coöperatively by the producers and should sell at cost such farm staples as butter, cheese, eggs, etc. His idea is for the farmers' coöperative societies to ship direct to the consumers' coöperative stores. This is eliminating the middlemen with a vengeance. The plan has never been tried to any extent with success. This does not mean that it could not be done. Another way is for the farmers to establish their own stores in the cities. This has been done, notably at Montreal, where the Quebec Agricultural Society of Cheese Makers has scored a notable coöperative success. This society represents 500 factories. It started in 1910, representing thirty factories. Auctions are held each week and lists of the produce for sale are furnished to all buyers. The society reserves the right to sell at prices offered, or to keep its products and sell in any other market available. A special representative is maintained in London to handle the products of this society. While it was originally intended to handle only cheese, this society now handles other farm products, all of which, like cheese, are graded and sold on the basis of quality. The company does a business in excess of $5,000,000 annually and George Cayer, general inspector of the department of Agriculture, Montreal, Canada, made a report of the work at Columbus. The society maintains a retail store at Montreal and sells all sorts of produce at less than the normal retail prices.

LADYSMITH'S CHERUB, OWNED BY D. D. TENNEY, CRYSTAL BAY, MINN., GRAND CHAMPION GUERNSEY BULL.

OXFORD MAJESTY'S GYPSY, OWNED BY L. V. WALKLEY, SOUTHINGTON, CONN., GRAND CHAMPION JERSEY COW.

These sidelights to the dairy show only reflected increasingly the brilliancy of the entire event. First and foremost of interest were the cattle, numbering 207 Jerseys, 135 Holsteins, 128 Guernseys, ninety-four Ayrshires and thirty-three head of Brown Swiss. These were the pick of the world's pure-bred herds. While most of the stuff shown was "over the head" of the average dairyman, lessons in production, care, feeding, cow testing, record work, making of dairy products and use of by-products were not lacking. The state of Ohio, coöperating with the dairy division of the federal department of agriculture, had a number of educational exhibits. The progeny of one bull and dam were shown, eleven in all, including daughters, granddaughters and great-granddaughters of the dam, all of these females being good producers and increasing in production down to the latest of the line. Peter Small, of Ohio, had owned the original bull, and after breeding this bull sold the animal for beef. The progeny of this bull developed into 600 to 1,000-pound cows, and what might his worth not have been had he been preserved to head other families and transmit his production qualities to other families such as the one shown? A good bull should not be disposed of too soon, or at too tender an age.

We have not looked upon Ohio as one of the top-notch dairy states, but she produced last year 307,570,755 gallons of milk. If this milk were placed in cans of ten gallons each and the cans set up side by side in a row, the line would reach 6,796 miles, a distance as far as from Columbus to Chicago, thence to Portland via the Twin Cities, thence to San Francisco and Los Angeles, and back to Columbus again via El Paso, San Antonio and New Orleans. Ohio produced last year 87,638,930 pounds of butter, and the pound bricks laid end to end would extend over a distance of 6,916 miles.

Milk samples submitted to a special committee were judged during the show. These samples were eight days old when judged and a few had to be cut down in points because of injury from disinfectants. The winner of the market milk prize was Benj. Sharpless, of West Chester, Pa., with a score of 98.8, and second place was awarded to Anton Moe, Duluth, Minn., score 98.5. Scores on market cream were: L. P. Bailey & Son, Tacoma, Wash., 98.5; Twin Oaks Farm, South Carolina, 98. On pasteurized milk the Milk Supply Co., Philadelphia, won first with a score of 97.4, and Harry Jones, Scranton, Pa., second, score 96.9. Nebraska won the gold medal for agricultural college classes with a score of 98.4 and Kentucky second and silver medal with a score of 98.1. The students' contests in judging dairy products did not bring out a large number of contestants, few of the colleges of the country being represented. South Dakota College of Agriculture won first on all classes. In judging all dairy products A. E. Miller, South Dakota, was first; Eli Duncombe, University of Nebraska, second; J. R. Shepherd, University of Nebraska, third; D. S. Kochheiser, Ohio State University, fourth; A. Thompkins, South Dakota, fifth, and S. V. Layson, South Dakota, sixth. Milk judging, with possible 3,000 points for perfect score, resulted as follows:

Kochheiser, Ohio, 2,907.5; Miller, South Dakota, 2,875; Shepherd, Nebraska, 2,855; Thompkins, South Dakota, 2,847.5.

Butter judging, possible 5,000 points for perfect score, resulted as follows:

Miller, South Dakota, 4,875; Duncombe, Nebraska, 4,830; Thompkins, South Dakota, 4,825; Shepherd, Nebraska, 4,805.

Cheese judging, with possible 4,000 points for perfect score, resulted as follows:

Duncombe, Nebraska, 3,727.6; Kochheiser, Ohio, 3,715; Shepherd, Nebraska, 3,677.5; Layson, South Dakota, 3,647.5.

The team judging resulted as follows:

Milk—1st South Dakota; 2d Nebraska; 3d Ohio.
Butter—1st South Dakota; 2d Nebraska; 3d Ohio.
Cheese—1st Nebraska; 2d South Dakato; 3d Ohio.
All Points—1st South Dakota; 2d Nebraska; 3d Ohio.

There is one feature of the National Dairy Show to which the writer cannot do justice in the limited space at command, and that was the machinery and equipment displays. Never before in the history of the industry has such a magnificent display of dairy equipment been gotten together. The barn equipment companies had big space, the separator companies, the milking machine companies, and the creamery supply and equipment companies. The visitors had an opportunity to learn about everything made for the creamery, the cheese factory, the dairy, and even of many things for the producers' homes. The information gained was not from inexperienced men, but from manufacturers and operators. Presidents and general managers of the large concerns were on the floor anxious to meet their old friends and to give any information asked for. Many dairy show visitors seemed as much interested in the manufacturers' displays as they were in the dairy cows and bulls. Two large buildings were devoted to dairy and creamery machinery, another to farm and barn equipment, another to automobiles, another to tractors and trucks, and additional space was provided for agricultural implements and mixed exhibits. The visitors had almost as

Which is Cheapest and Best Ration for Fattening Hogs?

Four Valuable Experiment Station Tests

Here is some mighty valuable information for hog raisers. Four instructive feeding experiments were conducted under the supervision of the Missouri and Kansas Experiment Stations at the St. Joseph, Mo., Stock Yards, to determine the comparative values of different rations for fattening hogs.

60 Cholera-immune hogs were selected and divided into lots of 15 each, as uniform in weight, quality and condition as possible.

The First Thing the Experts Did

Previous to starting this feeding test, the first thing the experts did was to get rid of the worms. They knew the importance of this step because no hog can thrive or fatten to best advantage unless free from these blood-sucking, feed-consuming, disease-breeding pests. They also knew that all hogs, unless previously treated, are always infested with worms. This is a very important point for you to remember—especially now when feed prices are so high.

Following is a result of the tests covering a period of 100 days:

Lot No. 1 with a ration of shelled corn and tankage (60% protein) made a total gain of 181.4 lbs., per hog and a net profit of $5.78 each.

Lot No. 2 with a ration of shelled corn and linseed meal (old process) made a gain of 147.2 lbs., per hog and a net profit of $3.95 each.

Lot No. 3 with a ration of shelled corn alone made a total gain of only 110.5 lbs., per hog and a net profit of only $1.88 per hog.

Lot No. 4 with a ration of shelled corn and skim-milk made a total gain of 190.8 lbs., per hog and a net profit of $6.53 per hog for the 100 days feeding. This lot made the greatest gain and the most profit.

No matter how YOU are feeding YOUR hogs, it is absolutely necessary, in order to get the cheapest and best results, that they are kept free from worms. You cannot afford to neglect giving them a good worm remedy like SAL-VET — the greatest, safest, surest and most widely used worm destroyer and conditioner — the cheapest and best worm remedy you can buy.

For only 2½c per month per hog you can keep your hogs free from worms, save feed, get faster gains, make maximum profits and avoid dangerous diseases, because healthy, worm-free hogs are less liable to contract fatal diseases. SAL-VET is not only best for hogs, but for sheep, horses and cattle.

"Please send us two barrels of SAL-VET at once. This is the best thing we have ever used. We use it for sheep, horses and over 100 hogs and find it all you claim."
A. J. LOVEJOY, Roscoe, Illinois.
Ex-Pres. International Live Stock Exhibit, Sec. Berkshire Breeder's Ass'n.

"My SAL-VET is all gone. Send me another barrel at once. $5.00 worth of SAL-VET saved me $10.00 worth of feed. My hogs, sheep, cows and horses are doing remarkably well. My experience has been that SAL-VET and worms cannot dwell together."
E. A. DONTRAGER, Fairview, Mich.

"I have been in the hog business for thirty years and have tried every known remedy for hogs, but have never found anything to equal your SAL-VET. It certainly does the work and is easy to feed. I fed it to little pigs, boars, pregnant sows and find it O. K. I'll never be without SAL-VET."
G. F. MARSHALL & SON, Monroe, Iowa.
Owners of Silver Cup Herd of Poland Chinas.

Test It 60 Days At Our Risk You can test SAL-VET 60 days at our risk. Go to your dealer and get a supply on our absolute guarantee that it will do all claimed for it or money refunded. If he cannot supply you write to us. Don't continue wasting high priced feed by feeding worm infested stock.

NOTE—We have just issued a New Live Stock Book that will be sent free on request.

good an opportunity to talk machinery and equipment as if they visited each of the scores of factories represented. Complete facts were given on construction of a dairy barn and illustration was made effective by models and machinery in motion. If one was interested in barn ventilation he could have the time of some of the best engineers in America on this important subject. All the fine points of every implement, tool and device which has been invented to help make the dairy business profitable and to conserve labor, were explained. Many of the booths were beautifully decorated. Some firms spent several thousand dollars each for space and decoration of booths. One firm employed the services of a decorator from Marshall Field in Chicago and presented a display which for richness and elegance has not been surpassed in any such exhibits we have ever seen. Electric lighting plants and gas engines, separators, milking machines, bottling machinery, bottle washers, complete creamery outfits, tractors, etc., were all seen in operation. Included in this display were booths devoted to the several commercial feed companies, and to the companies handling fertilizer products. Altogether these exhibits represented a panorama of the latest development in dairy equipment. These things make the present scope of the dairy business possible. And in these times of slack labor supply all available machinery which can help cut down labor costs is welcomed by the farmer and the dairyman.

The National Dairy Show came liberty bond week, and a patriotic spirit prevailed. On Wednesday, October 24th, a national and state holiday, the show visitors listened to addresses by Secretary Josephus Daniels, head of the navy department of our government, and Senator Pomerene, the senior senator from the state of Ohio. Both addresses were enthusiastically applauded. Herbert C. Hoover, food administrator, had hoped to be able to attend the show, but was unable to do so and sent G. Harold Powell, of his department, as his substitute. Mr. Powell addressed a mass meeting of dairymen in Memorial Hall, Columbus, October 22d. He reviewed the food situation somewhat along the same lines as given in this paper several weeks ago by Mr. Hoover himself. The latest figures on war losses show that Europe has slaughtered 28,000,000 head of cattle, 54,000,000 sheep and 32,000,000 hogs since the world carnage started. Before the war started the United States was an importer of dairy products. In the three years prior to the war the United States exported a little over 2 per cent of her condensed milk. In 1915 the production of condensed milk had been increased tremendously and 70 per cent of it was exported to our allies. In the three years prior to the war we exported 4,500,000 pounds of cheese and in the year 1916 we exported 66,000,000 pounds. In the three years prior to the war we exported about 4,500,000 pounds of butter and in 1915 we exported 26,000,000 pounds. These figures are strong proof that we must produce more in order to feed ourselves and the nations with whom we are joined in common cause. Mr. Powell explained the operation of the food law, declaring that the purposes of increased production are not merely idle talk, but that it is the intention of the government through its several departments to district the nation to the end that acreage will be increased, number of food animals increased, dairy products increased, and hoarding and speculation done away with.

The Columbus Horse Show was held in connection with the National Dairy Show. The evident purpose was to give some variety so as to stimulate local support. Some very good classes in the Percherons, Clydesdales and Belgians were shown. The Percheron classes were outstanding in number and merit. J. Crouch & Son, of Lafayette, Indiana, and Bell Bros., of Wooster, Ohio, had the largest number of entries. The stallion, Plata, owned by J. Crouch & Son, won the grand championship and Pet, a mare owned by J. Crouch & Son, was also a grand champion. Crouch's Lady Radisnor was junior champion mare. The Clydesdales were splendid in quality, though fewer in number, and the chief show was made by J. Leitch & Son, Lafayette, Illinois.

THE CATTLE SHOW.

Holsteins.—No one would doubt the growing popularity of the black and white cattle who saw the splendid showing made by the Holsteins at the National Dairy Show. Thousands of people gathered to see this particular event and it was well worth their time and money. Animals were led into the ring that are unsurpassed anywhere. Oak De Kol Ollie Homestead, the veteran show ring champion of Iowana Farms and winner of the senior and grand sweepstakes at the National last year, was among the lot and took the senior and grand championship trophies again this year. Many capable judges were willing to concede to him, after this year's victories, the honor of the world's greatest Holstein. Minerva Beets, the aged cow of the Haeger herd, was another star of the show. She also duplicated her record at the 1916 National by taking first in her class and senior and grand sweepstakes. Although the total number of entries was less than that of last year, the opinion of the ringside was that this show was at least equally as good as that of 1916. Mere numbers are not the chief consideration at a National Show. It should rather be a show wherein the best animals of the country, that have topped the classes in the local and state fairs come into final competition with one another. In this respect the National this year filled the bill splendidly, particularly in the Holstein breed. The West, however, took the big share of the trophies in spite of the good representation and strong competition from the East.

Exhibitors—Carnation Stock Farms, Seattle, Wash.; V. S. Culver, Stillwater, Minn.; Emblagaard Dairy, Marquette, Mich.; Galloway-Meser Farms, Waterloo, Iowa; R. E. Haeger, Algonquin, Ill.; Iowana Farms Davenport, Iowa; Iowa State College, Ames, Iowa; Lothian Riverode Stock Farm, Novelty, Ohio; J. C. Marlow & Geo. McCarger, Mankato, Minn.; Ohio Board of Administration, Columbus, Ohio; Peter Small, Chestertand, Ohio; E. L. Zehring, Germantown, Ohio; Oscar Zehring, Germantown, Ohio. Judge, W. S. Moscrip, North St. Paul, Minn.

Jerseys.—The East has long claimed the distinction of producing the best cattle, but this year at the National, the West and South contradicted this claim by carrying away a good share of the prize ribbons. But they did not do so easily. The whole show of Jerseys was a royal battle in which the winners gained their places on close points. It is very likely that there never has occurred a closer contest in the live stock show ring anywhere than that which took place among the 207 Jerseys that were exhibited at Columbus. In the aged bull class the entire lot was a group of prize winners—every one would have been worthy of first place, so that it fell to the lot of Prof. H. H. Kildee, judge, to find out which was most worthy by considering in detail the closest points of excellence. The outcome of his work was to place the blue ribbon on Gamboge's Vellum Majesty, owned by M. D. Munn, of St. Paul, Minn., and to put Noble Sultan's Golden Fern, the hitherto undefeated champion of many shows, in second place. This was a sad shock to his owner, Mrs. Harry H. Galbraith, of Knoxville, Tenn., who entered the showring and with tears in her eyes caressingly stroked the neck of her beloved champion. When Colonel Munn, who is president of the American Jersey Cattle Club, saw that his bull had won he rushed into the ring and proudly kissed the animal on the forehead. Later the Munn bull worked his way to the place of senior and grand champion of the show. Interest in the exhibit of aged cows was quite as tense, although less dramatic as that of aged bulls. Twenty splendid cows were shown in this class, representing some of the highest types of milk producers in the world. As a fitting top to such a class came Oxford Majesty's Gipsy, a seven year old owned by L. V. Walkley, of Southington, Conn. This beautiful cow of wonderful character and style was later declared senior and grand champion cow of the show. Other classes, both male and female, were well filled and commanded great interest from the ringside. In the championship classes, three of the sweepstakes went to the Middle West, two to the East and one to the South. This is a good indication of the fact that the Middle West is coming to the front in the Jersey breeding business.

Exhibitors—Allen Dale Farms, Shelbyville, Ky.; Ayer & McKinnes, Meredith, N. Y.; Hugh W. Bonnell, Youngstown, Ohio; Black Belt Stock Farm, Marion Junction, Ala.; L. P. Bailey & Sons, Barnesville, Ohio; Mrs. Harry Galbraith, Knoxville, Tenn.; W. A. Griswold, Nashville, Tenn.; C. M. Gooch, Spring Hill, Tenn.; Hood Farm, Lowell, Mass.; J. E. Kelly, Xenia, Ohio; Ed S. Produce Eggs at 17¢ a Doz.

The U. S. Dept. of Agriculture at the Experimental Farm, Beltsville, Md., during the past year has proven conclusively that if you make your hens LAY instead of allowing them to LOAF you should be able to produce eggs at a food cost of about 16¾c per dozen, even at present feed prices—AND YOU CAN MAKE THEM LAY.

You may not do quite as well as the Government's experts but you can come mighty close to it by mixing

Pratts Poultry Regulator

daily with a good egg-making ration, at a cost of one cent a month per hen. Do this and we guarantee your flock will produce the extra eggs that bring the big profits.

Pratts Poultry Regulator is a *concentrated tonic and conditioner*—not a food. It makes the ration *more effective, therefore cheaper.* It strengthens and tones up the entire system in a natural way—sharpens the appetite and improves digestion—enriches the blood—regulates the bowels—insures perfect health—makes the egg-producing organs do full duty—brings a profitable egg-yield.

Our dealer in your town has instructions to supply you with Pratts Preparations under our square-deal guarantee—*"Your money back if YOU are not satisfied"*—the guarantee that has stood for nearly 50 years.

CLOVER SEED.

WANTED—Good quality medium Red and Alsike clover seed. Send samples. Dadmun Brothers, Whitewater, Wis.

In and Around Wisconsin

The accompanying illustration shows the progress of construction of the Inter-County Holstein Breeders' Association pavilion at Watertown, Wisconsin. The picture was taken the latter part of September and the pavilion is now complete and in readiness for the Inter-County Holstein sale November 8th and 9th. The Inter-County Holstein Breeders' Association is incorporated for $5,000, divided into shares of $50 each, and these shares have been taken by leading breeders of Dodge and Jefferson counties. The association is recognized by railroads as an industrial corporation and one of the benefits of such recognition is that both railroads, the North-Western and St. Paul lines, make transfers without additional charge. This is quite an item to consigners, purchasers and others interested in the company or the sale. The building is situated a short distance from the North-Western station and this affords the handling of animals brought in for the sale or shipped out. This new sales pavilion is 192x50 feet and is a great improvement over the old arrangements for these sales on the fair grounds. The progressive people of Watertown donated $500 toward the building site and it is the intention of the Inter-County Holstein Breeders' Association to hold its annual and spring sales hereafter in this new sales pavilion.

NEW SALES PAVILION OF INTER-COUNTY HOLSTEIN ASSOCIATION, WATERTOWN, WIS.

Attention of our readers is called to the baby beef contest to be held at Madison, November 14th and 15th, under the direction of the Wisconsin Live Stock Breeders' Association in coöperation with the college of agriculture and several associations representing the beef breeds. This event is the annual round-up of Wisconsin boys and girls who have fed and exhibited their baby beeves at county and district fairs. A total of $544 will be offered in prize money. There are two classes—one for senior calves dropped since September 1, 1916, and one for junior calves dropped on or after January 1, 1917.

The American Short-horn Breeders' Association and the American Hereford Breeders' Association will add special prizes of 25 per cent to all premiums won at this show by Short-horns and Herefords respectively. Following the judging the animals placed will be sold and it is expected that representatives of all the leading packing companies will be on hand to make the bids.

John C. Robinson, Evansville, Wisconsin, has been acting as coach for the boys who have been developing baby beeves. The judge at the final round-up will be J. G. Imboden, Decatur, Illinois. Mr. Imboden will not only pick out the prize winners, but he will explain the baby beef proposition covering the essential points for a good feeder and the right covering and quality of flesh. The merits and defects of animals which bid close for first honors will be publicly stated. Seventy-two boys and seven girls have been entered for the round-up show and it is expected that between sixty and seventy calves will line up for the finals on November 14th. The Wisconsin counties which will be represented are: Buffalo, Columbus, Grant, Iowa, Pierce, Portage, Sauk, Richland Rock, St. Croix and Walworth.

The judging of the senior class will occur at 10 a. m. Wednesday, November 14th, and the judging of the junior class at 2 p. m. There will be a banquet at 6 p. m. and the sale of calves will occur at 9 a. m., Thursday, November 15th.

The committee of beef specialists who formulated the rules and have strict charge of the contests include these men: J. W. Martin, Gotham; W. L. Houser, Mondovi; J. C. Robinson, Evansville; R. E. Reynolds, Lodi; C. W. Thompson, Lake Geneva; J. L. Tormey, Madison; W. M. Connell, Menomonee Falls; Parke Gelbach, Lancaster; George Carpenter, Baraboo; R. Baker, Madison. G. E. Brainard will again act as superintendent of the show.

A few features of the Wisconsin Potato Growers' Conventiin, to be held in Madison November 19th-24th, have been announced. On Wednesday morning, November 21st, the session will be devoted to the Wisconsin seed potato trade. The afternoon session of the same day will be devoted to food administration and the program will be in charge of the State Council of Defense. Hon. Carl Vrooman, assistant secretary of agriculture, will speak Wednesday evening. Both the morning and afternoon programs of Thursday, October 22d, will be devoted to grading, shipping and developing problems. In the evening R. H. Aishton, president of the North-Western Railroad, will speak. The boys' and girls' potato club sessions will be held Friday afternoon, November 23d.

Buttermakers' High Scores.

The Wisconsin Buttermakers' Association held a meeting at Milwaukee, October 9th, 10th and 11th, in joint session with the National Creamery Buttermakers' Association. As usual, there was a fine exhibit of Wisconsin butter and the ten high scores were as follows:

1. L. L. Bolstead, Basco.....97.25
2. John E. Mattson, St. Croix Falls 96.00
3. B. L. Lindvig, Milltown.....95.50
4. F. M. Werner, Waterloo.....95.30
5. H. B. Hoiburg, Coon Valley..95.20
6. C. J. Jensen, Withee.....95.10
7. Harry D. Nichols, West De Pere 95.00
8. A. J. Rivard, Esmerald 95.00
9. John Morgensen, Wyocena...94.70
10. Arthur A. Olsen, Oshkosh....94.60

Average 95.365

The honor scores for Wisconsin buttermakers by districts were as follows:

Honor Prize—L. L. Bolstead, Basco.
State Prize—1st B. L. Lindvig, Milltown; 2d F. M. Werner, Waterloo; 3d H. B. Hoiburg, Coon Valley; 4th C. J. Jensen, Withee.

District Prizes—1st District, 1st John Morgensen, Wyocena; 2d J. F. Madison, Oconomowoc. 2d District, 1st Albert E. Will, Jefferson; 2d Rudolph Else, Johnson Creek. 3d District, Olof Larson, Gays Mills; 2d Harry Christenson, Tomah. 4th District, 1st H. Nichols, West De Pere; 2d Arthur A. Olsen, Oshkosh. 5th District, 1st Odin Christensen, Nelsonville; 2d T. J. Warner, Rosholt. 6th District, 1st Irvin Melsby, Durand; 2d H. B. Oaks, West Salem. 7th District, 1st H. E. Jahnke, Florence; 2d Crivitz Creamery Co., Crivitz. 8th District, 1st Chris J. Back, Luck; 2d H. D. Harrison, Clear Lake.

During the session of the convention a resolution of sincere congratulations and heartiest greetings was unanimously passed and forwarded ex-Gov. W. D. Hoard on the occasion of his eighty-first birthday.

"Drink buttermilk freely," says the U. S. Food Administration in its effort to encourage the use of dairy by-products. The use of buttermilk is largely a matter of habit. Southern cities consume almost as much buttermilk as sweet milk. The difficulty of keeping milk sweet has been largely responsible for the popularity of buttermilk as a beverage.

9 MONTHS PASTURE

NINE months pasture, a mild climate, ample rainfall, a long growing season for a great variety of staple crops—these are advantages enjoyed by Northern farmers NOW prospering in the

Highlands of Louisiana

YOU are offered the same opportunity in a healthful upland country; good land, gently rolling and well drained, low prices, easy terms. The coming dairy and general farming country. The big new book, **"Where Soil and Climate Are Never Idle,"** tells all about it—sent FREE to you if you write for it at once.

Low rate homeseekers' excursions to these lands first and third Tuesdays of each month.

Long-Bell Farm Land Corporation
416 R. A. Long Bldg., Kansas City, Mo.

ARE YOU LOOKING FOR THIS?

Good land at a low price in the Sunny Uplands of Louisiana; land that can be made to produce more, and at less expense than the highest priced land in the North; land in an ideal climate where winters are like spring and summers are cooled by the delightful gulf breezes; long growing seasons; corn, cotton, winter oats, cattle, hogs, chickens, delicious fruits, potatoes, sweet potatoes, peanuts, beans, early and late garden truck, strawberries, etc.—an immense variety of products including practically all grown in the North and many besides. Low priced land near good, live towns and cities, with railroads running north and south, east and west; land having splendid possibilities for oil and located less than 100 miles from several of the largest oil refineries in the world. We have already sold more than 45,000 acres of this land. Price $20 to $30 per acre, the last named price being for a few partially improved farms; easy terms. Write us for full information, or come and see us; excursion rates. American Farm Land Company, DeRidder, Louisiana.

VIRGINIA FARMS—Fifty-page catalog free, describing alfalfa, blue grass, stock, dairy and poultry farms. Good lands and prices right. Write today for catalog. Business established 1899. Allison Land Agency, Fredericksburg, Va.

WANTED TO HEAR FROM OWNER of good ranch for sale. State cash price, full particulars. Address, mentioning this paper, D. F. Bush, Minneapolis, Minn.

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 24th year. This paper fills the bill without emptying the purse; it costs but **$1** a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. A dollar bill mailed at our risk will bring you the Pathfinder for a full year, or simply send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. This does not repay us but we are glad to invest in new friends. **Pathfinder, B. 70, Washington, D.C.**

Eleventh National Dairy Show.

Guernseys.—The Central and Far West figured conspicuously in the Guernsey showing at the National Dairy Show, and overshadowed the East to a considerable extent. The chief defenders of the Central West were D. D. Tenney, of Crystal Bay, Minn., and that veteran breeder, W. W. Marsh, of Waterloo. From the Far West came W. H. Dupee, of Santee, Cal., to contest the prominence won by the Central West at the National a year ago. Although Mr. Dupee, with his excellent herd of western champions, was a formidable rival, he could not stand the competition of the Marsh herd and therefore fell into second place with Mr. Marsh as the foremost exhibitor. He did, however, capture a number of enviable prizes, including the junior championship. The senior and grand championships in the bull classes went to Mr. Tenney on Ladysmith's Cherub, an aged bull bred by Mr. Marsh. Both senior and grand champion heifer came from the Marsh herd. The first was Imp. Princess Bergere, an aged cow, and the second, Imp. Rose des Howards of the Prairie, the winner of the senior calf class.

Exhibitors—Borden's Condensed Milk Co., Earlville, N. Y.; Chas. D. Cleveland, Eatontown, N. J.; C. F. Curtiss, Ames, Iowa; W. H. Dupee, Santee, Cal.; Alice R. G. Dalbey, Granville, Ohio; D. K. Este Fisher, Ruxton, Md.; Iowa State College, Ames, Iowa; O. C. Barber, Akron, Ohio; Lewis Farms, Winneconne, Wis.; Louis McL. Merryman, Cockeysville Md.; W. W. Marsh, Waterloo, Iowa; Parkwood Farms, Toledo, Ohio; Raemelton Farm, Mansfield, Ohio; Dr. M. L. Reed, Coal Valley, Pa.; A. W. Smith, Pataskala, Ohio; D. D. Tenney, Crystal Bay, Minn.; Wendover Farm, Bernardsville, N. J.; S. B. Walbolt & Son, Waterville, Ohio. Judges, C. L. Hill, Rosendale, Wis.; Robert Scoville, Taconic, Conn., and W. A. McKerrow, St. Paul, Minn.

Hayes Golden Cherry 8th, 6th Merryman on Edna of Gerar; advance registry cow with two of her progeny (1 shown), 1st Dupee; dairy herd (3 shown), 1st Marsh, 2d Dupee, 3d Tenney.

Ayrshires.—The females made a much stronger showing than the bulls in the Ayrshire breed at the National last week. They could hardly be improved upon, at least not from the standpoint of quality. The aged class in particular was a wonderful exhibit. Eleven head were led into the ring and it is doubtful whether such a good lot has ever before been shown. The prizes all went to the East, with the exception of the Seitz entry, which took fifth place. This was expected, however, since the East has always been the stronghold of this popular Scotch breed. Shewalton Main's Queen Imp., of the Strathglass Farm, Port Chester, N. Y., topped the class and later became senior and grand champion cow of the show. Will Forbes, Waterloo, Iowa, who judged the Ayrshires, declared she was one of the most wonderful cows he had ever seen. In the bull classes Imp. Howie's Mint Master, of Wendover Farm, won first place in the aged class, but was not at all popular with the ringside. He also won the senior championship, but met defeat in the grand champion sweepstakes before the junior bull, Cavalier's Lord Stuart, a yearling of the Seitz herd. A very commendable point in regard to the Seitz herd is that it has been put into show form by Mr. Seitz's breeding work and not by an attempt to search the country for show animals in order to buy up a prize-winning herd.

Exhibitors.—Wm. Galloway, Waterloo, Iowa; Glengarry Stock Farm, Hudson, Ohio; Henderson Ayrshire Farm, Hudson, Ohio; Iroquois Farm, Cooperstown, N. Y.; South Farm, Willoughby, Ohio; Adam Seitz, Waukesha, Wis.; Wendover Farm, Bernardsville, N. J.; Strathglass Farm, Port Chester, N. Y. Judge, Will Forbes, Waterloo, Iowa.

Aged bull (5 shown), 1st Wendover Farm on Imp. Howie's Mint Master, 2d and 3d Strathglass Farm on Hobsland Piecemeal Imp. and Hobsland Perfect Piece Imp., 4th Galloway on Auchenbrain Good Gift, 5th South Farm on Victor of South Farm; two year old (3 shown), 1st Seitz on Cavalier's Lord Rose, 2d Henderson Ayrshire Farm on Chapel Hill Fearnought, 3d Iroquois Farm on Netherhall Keystone; yearling (4 shown), 1st Seitz on Cavalier's Lord Stuart, 2d Strathglass Farm on Strathglass Monte Cristo, 3d Iroquois Farm on Iroquois Brother Alex, 4th Glengarry Stock Farm on Drummond's Champion of Glengarry; senior calf (6 shown), 1st Wendover Farm on Nancy's Mint Master, 2d Seitz on Cavaliers' Beuchan Lindsay, 3d Strathglass Farm on Strathglass Sir Spencer, 4th Galloway on Lucius Good Gift, 5th and 6th Iroquois Farm on Iroquois Scotchman and Iroquois Cinnamon; junior calf (6 shown), 1st and 5th Strathglass Farm on Strathglass Scottish Chief and Strathglass Good Hope, 2d and 3d Seitz on Cavalier's Rising Archer and Cavalier's Beuchan Silver Tips, 4th and 6th Galloway on Sir Douglass Peter Pan and Harry Peter Pan.

Aged cow (11 shown), 1st and 2d Strathglass Farm on Shewalton Main's Queen Imp. and Lochfergus Snow Imp, 3d and 6th Iroquois Farm on Auchenbrain Hattie 6th and Rainton Daisy 2d, 4th Wendover Farm on Imp. Hobsland Miss May, 5th Seitz on Imp. Oldhall Beauty 8th; four year old (2 shown), 1st and 2d Strathglass Farm on Otterhill Mina and Shewalton Main's Queen; three year old (6 shown), 1st Wendover Farm on Imp. Nether Craig Gay Lass, 2d and 5th Strathglass Farm on Fairfield Main's Jean 10th and Strathglass Constance, 3d Iroquois Farm on Burnside Spottie, 4th and 6th Seitz on Cavalier's Lady Martin and Imp. Blackbyres Lady Walker; two year old (10 shown), 1st Strathglass Farm on Netherhall Kirsty Imp, 2d and 5th Wendover Farm on Netherton Yellow Kate 4th and Ryanogue Lady Peggy, 3d Galloway on Nona Spencer, 4th Seitz on Cavalier's Lady Mary Stuart, 6th Iroquois Farm on Iroquois Auchnashelloch; senior yearling (10 shown), 1st and 6th Strathglass Farm on Strathglass Pride and Strathglass Burnside Pearl, 2d and 4th Wendover Farm on Ryanogue Twinkle and Ryanogue Miss May 2d, 3d and 5th Galloway on Good Gift's Nona and Good Gift's Clemie; junior yearling (6 shown), 1st and 3d Seitz on Cavalier's Kilnford Dorothy and Iroquois Brown Bess, 2d and 4th Wendover Farm on Ryanogue Peggy's Lady and Wendover Farm Spicy Lady, 5th Strathglass Farm on Strathglass Beauty, 6th Iroquois Farm on Iroquois Brown Bess; senior calf (8 shown), 1st, 4th and 5th Seitz on Cavalier's Kilnford Bell, Cavalier's Beuchan Queen and Cavalier's White Lady, 2d and 6th Strathglass Farm on Strathglass Swanny and Strathglass Cheerup, 3d Wendover Farm on Ryanogue Tumpany; junior calf (7 shown), 1st and 3d Strathglass on Strathglass Lady Pearl and Strathglass Bluebell 2d, 2d Seitz, 4th Galloway on Minnie Good Gift, 5th Wendover Farm on Barclay's White Flora 3d, 6th Iroquois Farm on Otsego's Clover.

Senior champion bull, Wendover Farm on Imp. Howie's Mint Master; junior and grand champion bull, Seitz on Cavalier's Lord Stuart; senior and grand champion cow, Strathglass Farm on Shewalton Main's Queen Imp; junior champion heifer, Seitz on Cavalier's Kilnford Dorothy.

Exhibitor's herd (5 shown), 1st Strathglass Farm, 2d Wendover Farm, 3d Seitz, 4th Iroquois Farm, 5th Galloway; young herd (3 shown), 1st Seitz, 2d Strathglass Farm, 3d Galloway; breeder's calf herd (3 shown), 1st Strathglass Farm, 2d Seitz, 3d Iroquois Farm; get of sire (6 shown), 1st and 3d Strathglass Farm on get of Hobsland Perfect Piece Imp and Netherhall True to Time, 2d and 5th Seitz on get of unnamed, 3d and 6th Galloway on get of Iroquois Otsego and Gay Cavalier; produce of cow (6 shown), 1st and 2d Seitz on produce of Beuchan Dorothy and Lady Mary Stuart, 3d Wendover Farm on produce of Ryanogue Lady Peggy, 4th Galloway on produce of unnamed, 5th and 6th Strathglass Farm on produce of Beuchan Lady Constance and Shewalton Main's Queen Imp.

Brown Swiss.—Two exhibitors made up the showing of Brown Swiss cattle at the National this year. They were well matched and put up a good contest in spite of the fact that a good number of entries was lacking. In the end, however, Hull Bros., Painesville, Ohio, succeeded in getting a little the best of the fight. Their well-known aged cow, Swiss Valley Girl 7th, won senior and grand championship in the female class. Hull Bros. lost, however, in the aged bull class to their competitor, Marshall & Sons, Leslie, Mich., who exhibited their aged herd bull, Stasis Boy of Sedgley. This animal later captured the senior and grand champion purples.

Exhibitors—Hull Brothers, Painesville, Ohio.; L. S. Marshall & Sons, Leslie, Mich. Judge, H. G. Van Pelt, Waterloo, Iowa.

Aged bull (2 shown), 1st Marshall & Sons on Stasis Boy of Sedgley, 2d Hull Bros. on Dick of Lake View; two year old (1 shown), Hull Bros. on McAvoy H.; yearling (2 shown), 1st Hull Bros. on Vogel's College Boy, 2d Marshall & Sons on Marcus; senior calf (3 shown), 1st Marshall & Sons on Boenna F. King, 2d and 3d Hull Bros. on Mercedes of Lake View and Kololo of Lake View; junior calf (2 shown), 1st and 2d Hull Bros. on Cinderella Boy and Supreme of Lake View.

Aged cow (4 shown), 1st and 3d Hull Bros. on Swiss Valley Girl 7th and Lottie G. D., 2d and 4th Marshall & Sons on Brownie F. and Nellie F.; three year old (4 shown), 1st and 3d Hull Bros. on Ruth Wilson 2d and Innis of Lake View, 2d Marshall & Sons on Beaut; two year old (3 shown), 1st and 3d Marshall & Sons on Minnie's B. and Buenna B., 2d Hull Bros. on Swiss Valley Girl 9th; senior yearling, 1st and 2d Hull Bros. on Betty of Lake View and Vera of Lake View, 3d and 4th Marshall & Sons on Valley Girl M. and Jackson Lady; junior yearling (1 shown), 1st Hull Bros. on Dorothy Downer; senior calf (3 shown), 1st and 2d Hull Bros., on Belle of Lake View, and Georgia Ann of Lake View, 3d Marshall & Sons on Buenna F.'s B.; junior calf (4 shown), 1st and 2d Marshall & Sons, 3d and 4th Hull Bros. on Hattie K of Lake View and Elsie of Lake View.

Senior and grand champion bull, Marshall & Sons on Stasis Boy of Sedgley; junior champion bull, Hull Bros. on Vogel's College Boy; senior and grand champion cow, Hull Bros. on Swiss Valley Girl 7th; junior champion heifer, Hull Bros. on Belle of Lake View; exhibitor's herd (2 shown), 1st Hull Bros., 2d Marshall & Sons; young herd (2 shown), 1st Hull Bros., 2d Marshall & Sons; breeders calf herd (2 shown), 1st Marshall & Sons, 2d Hull Bros.; get of sire (3 shown), 1st Hull Bros. on get of Reuben, 2d and 3d Marshall & Sons; produce of cow (3 shown), 1st and 3d Hull Bros. on produce of Swiss Valley Girl 7th and Edna of Lake View; 2d Marshall & Sons.

Law Questions.

Fourth of July a Working Day.

Mr. Herman Hendrickson, Radcliffe, Iowa—I have a man hired to work for me for one year He took a day off on the 4th of July, claiming it is a holiday, and he wants me to pay him wages for that day. Can he compel me to do so by law?

Answer.—He cannot. The law making the 4th of July a legal holiday does not apply to employers or employes. Unless it comes on Sunday it is a working day like any other week day.

Obtaining Private Road.

A Subscriber, Delton, Wis.—A owns a forty-acre tract of land adjoining a lake, in Wisconsin. B, a woman, owns a cottage on one corner of said tract, and has access to her cottage on the lake. Can she compel A to give her a road from her cottage to the opposite corner of his land, and thence to the main road?

Answer.—B can obtain such a road not less than two rods nor more than three rods wide in the following manner: B should file with the supervisors of the town an affidavit stating that she owns the land and cottage, describing same, and that it is shut out from all public roads by A's land, which surrounds it. The supervisors will notify the parties of the hearing on the matter so they may be present, and on proof of the facts stated in the affidavit, they will lay out a road for her and fix the amount of damages she is to pay A for the same and when she pays such amount, with costs, she will have the right to such road.

Lake Mills Holstein Sale.

The demand for heifers and cows not fresh or not due to freshen soon was not keen at the Lake Mills sale October 23d and 24th, though young bulls possessing high record backing and some of the choicest cows that were fresh or due to freshen shortly sold well. This sale demonstrated again very conclusively the fact that it does not pay to enter heifers in the rough to fall sales, owing to the scarcity of feed and difficulty in procuring satisfactory farm help. The most sensational and spectacular demonstration occurred when Charlie Beveridge sold his 33-pound bull. This calf entered the ring in the height of condition and was typical of the class of animals which Mr. Beveridge has been consigning to these sales for a number of years. This calf shot up to the $1,000 mark in a few minutes. John Goldthorpe, of Milton Junction, ran him up to $2,000. J. E. Jones, of Watertown, went as high as $2,250 and Baltz Hoesley, of Monroe, and Andrew Frank, of Fox Lake, fought it ought on the home stretch. Mr. Hoesley's last bid was $2,975 and Mr. Frank finally purchased the bull, rounding the figure out at $3,000. This sale is unquestionably the best one ever made at the Lake Mills sales for a bull of his age and we feel that both Mr. Beveridge and Mr. Frank are to be congratulated in the transaction. The next highest priced animal of the sale was the three times 31-pound bull calf consigned by W. H. Reed, of Palmyra. This calf, like the one Mr. Beveridge sold, was a practically perfect individual and should have brought more than $1,100. Mr. Reed, however, had the distinction of having the highest priced cow of the sale and his consignment of five head sold at a very satisfactory average, being considerably over $500. Lashbrook's 35-pound

Upper Wisconsin.

Plan to Increase Sheep Production.

Our readers in Upper Wisconsin will be interested in the meeting which was recently held at Bemidiji, Minnesota, the outgrowth of work which is being conducted by the Northern Minnesota Sheep Growers' Association. Representatives of bankers, press and commercial clubs met with the sheep growers. The plan which was finally adopted for the purpose of increasing the sheep and wool business in northern Minnesota may be carried out in almost any community in Upper Wisconsin. This plan is embodied in the following resolutions:

Resolved, That since the great world struggle in which this country is now engaged to establish democracy, safety and equal rights to all people great and small, this association pledges its unswerving support to the government of the United States. And we as an organization and as individuals pledge ourselves to crush the head of treason wherever and whenever it appears. There is absolutely no middle course. Our every act and every word must be in support of the cause for which we are fighting. Anything less would taint of treason. We condemn any utterance on public platform or in private life that tends to lend aid or comfort to the enemy.

It is imperative for all interests of the country to stimulate and increase the production of food and clothing to the very utmost. The shortage of animal products and breeding stock, together with the ever increasing demand for same, opens to the American farmer opportunities greater than ever before, and that both as a patriotic duty and as good business we as farmers and business men heartily endorse rapid development of the sheep industry in northern Minnesota.

First. Be it resolved, that an organization be now perfected to be known as the "Northern Minnesota Sheep Growers' Asociation," for the purpose of promoting the sheep industry in the counties of Itasca, Koochiching, Clearwater, Beltrami, Hubbard, Cass, St. Louis, Aitkin, Crow Wing, Wadena, Carlton, Becker and such other territory as may later be added to the association.

That such association have an executive committee of ten members, consisting of a president, a vice president, a secretary, a treasurer and six directors, to be chosen at large by the association at the annual meeting.

That qualification for membership in this association shall be residence in any of the counties included in the association, and the payment of annual dues of $1; also residents of Minnesota not included in the above territory upon recommendation of the executive committee and the payment of like annual dues.

Second. That said executive committee, besides being empowered to provide for membership dues, be also authorized to solicit and receive donations from commercial bodies and other sources for the purpose of providing funds to defray the necessary expenses of the executive committee at their special meetings and in carrying on a systematic plan of education and organization.

Third. That said executive committee be requested forthwith to plan and put into execution a system of organizing local groups, preferably centered around cities or villages where banking institutions can be interested in financing the matter of purchasing sheep and selling the same to actual farmers, under such plans and with much securities as shall hereafter be determined upon.

Fourth. That wherever such local groups can be organized, the farmers in such groups be enlightened as to the general plans, and that each group be urged to adopt and put into execution a plan somewhat as follows:

In each group an investigating committee of three or more men shall be formed, consisting preferably of men whose judgment is acceptable to the bankers providing the funds as hereinafter provided, and that the duties of such investigating committee shall be to ascertain the names of farmers worthy of trust who will want to purchase sheep under the method following, to wit:

It is recommended that each farmer purchase under these provisions not to exceed ten ewes, though this is flexible, being governed by special circumstances. That he pay as much thereon as he can afford without handicapping himself in the purchase of woven wire. That for such amount as he cannot afford to pay down, the farmer give a note to the bank secured by a chattel mortgage on the sheep purchased and the increase thereof. That if further security is desired by the banks, additional security be arranged as follows: The local business men form some kind of organization to guarantee to the bank the payment of all chattel notes, and that as many local business men as possible be urged to become such guarantors so as to minimize any possible loss they may sustain as such guarantors.

Fifth. That some plan be devised by said executive committee to have some competent person, either county agent, agricultural instructor or some general agent for the entire district, supervise the care of the sheep and instruct the farmers as to the proper care and handling of the sheep.

Sixth. That the executive committee take immediate steps to employ a competent person or persons to select and purchase suitable breeding ewes to fill the demands and requests for sheep as turned in by reports from the local groups to the central executive committee.

Seventh. That said central executive committee be urged to carry on a vigorous and systematic campaign of education, sending out speakers to the several communities to work up sheep sentiment.

Eighth. That said executive committee forthwith devise a system to be carried out by the local groups for providing suitable rams to be distributed among the flocks under such plans as may seem feasible.

Ninth. That said executive committee forthwith devise plans for the local groups, through their bankers, to purchase woven wire to the best advantage, having in view the saving effected through freight and prices on larger shipments.

Tenth. That the executive committee be urged forthwith to devise methods of community shipping and marketing of sheep and wool, providing dipping tanks, procuring the presence and services of competent sheep shearers, and carrying on other work of a coöperative nature.

Eleventh. That the executive committee appointed shall hold office until the next regular meeting, which shall be held at such time and place as shall be determined by the executive committee, and shall be instructed and authorized to draw up and submit at such meeting a set of by-laws for said association, and also a set of by-laws appropriate for the local groups to the end that such groups shall as far as possible be governed by a uniform system of by-laws.

Twelfth. That annual dues of $1 be invited and received today from those interested in the development of the sheep industry in northern Minnesota, such dues to cover the year 1918.

This plan had previously been submitted to a number of farmers and business men in the neighborhood and it also has the loyal support of Minnesota Experiment Station workers and such men as T. A. Hoverstad, agricultural commissioner of the Soo Line, and D. E. Willard, development agent of the Northern Pacific Railroad. With a central organization such as this and local groups such as are arranged for in the general organization plan it should be possible to arouse a great deal of interest in our own sheep industry. Inasmuch as the conditions in much of northern Minnesota are similar to those in parts of Upper Wisconsin the plan which has been worked out in our sister state may well be given some thought in Upper Wisconsin. There is no doubt but what we could raise many more sheep with profit to ourselves and we would at the same time be doing a patriotic service by adding to the nation's wool and meat supply.

A loss of live weight of hogs and waste of feed result from the practice of purchasing local hogs in small lots and holding them in local stockyards until a carload shipment is collected, according to specialists of the United States Bureau of Markets. They point out that at this and other seasons when runs are light, it often takes local buyers four or five days to assemble enough small lots for a carload. As facilities for feed and watering are inferior in small yards, the hogs make no further gains on their feed and often suffer actual loss of live weight. Local buyers, therefore, would do well to specify a certain day for the delivery of lots from the various farms and load and ship without holding. Farmers also could club together to make up coöperative carload shipments on regular week days, thus saving the margin lost in individual small-lot selling.

FUR MONEY for YOU

Wisconsin Dairymen Hooverizing

Real Dairymen Are Not Losing Interest in the Good Old Dairy Cow —1,470 Herds Investigated—By Noel Negley.

TO SAVE all you can, to use most effectively all you save, to produce all you can, and that most efficiently, might be a good definition of "Hooverism" as it applies to the dairyman. Conservation in consumption of feed and labor, and efficiency in production of dairy products—but call it what you will, this is the doctrine taught by the Wisconsin cow testers and practiced by their members.

BESSIE LIPSTZ, FIRST WOMAN COW TESTER IN WISCONSIN. SHE TESTS THE COWS IN THE AVOCA TESTING ASSOCIATION.

BUYING FEED COOPERATIVELY IS BEING PRACTICED MORE EACH YEAR.

"Don't you know this is the worst community in the state?" is quite a common question in sections where we start to organize a cow-testing association. Yet when he really gets acquainted with his neighbor he finds him not much worse than himself, and that by working together they can put money in their pockets, joy in their work, and friendship in their hearts. That the real dairymen are not losing faith in the good old dairy cow is evidenced by the replies received from testers who have investigated the situation in 1,470 herds. In reply to the question, "Are any of your members going out of the dairy business because of feed prices and labor shortage? How many?" out of forty-nine replies forty-one testers report "No," the balance reporting that six members had gone out of the business and two members were cutting size of herds.

The "heifer calf savers" of the country need not worry about the situation in Wisconsin, and those who fear that dairymen are selling their herds and going out of business may as well begin to get afraid of something else, according to the reports on these conditions by forty-nine testers who have interviewed 1,470 dairymen having 25,000 cows on test. In reply to the question: "Are there more heifer calves being sold for veal than formerly?" every one of the testers reported "No." In reply to the question, "Are there any good heifer calves from pure-bred bulls being sold for veal?" forty-one reported "No," four reported "Yes" and four reported "Few."

What do the dairymen of Wisconsin think of the milking machine? Because of the keenness of the labor situation, dairymen may be interested to know how the problem is handled on many successful farms. Reports from 1,861 members of Wisconsin cow-testing associations show that 230 are now using milking machines, thirteen have had machines on trial, but have taken them out, and nine would prefer hand milking if good help could be secured at a reasonable figure. The reasons for discarding these thirteen machines are interesting: One member says he gets no service from the company and that the repairs cost too much; another discarded his because he did not like to strip after the machine. Four others thought they themselves were at fault rather than the machine. One member discontinued use of the machine because he and his two boys could milk faster by hand. Another says, after using the machine thirty days, "It's no good."

It is not to be expected that everyone would get along satisfactorily with a machine, but to have only thirteen members that are dissatisfied, four of which do not blame the machine, out of a total of 243 who have used them, makes one feel that the new hired man is a success. Out of the 243 who have machines, 230 members enthusiastically indorse them with such statements as these: Julius Bowe, Chilton, "I would give up dairying if I had to go without my machine." E. P. Kinney, tester at Chippewa Falls, says, "Ten of my members have machines and several more will be installed. They say they can do better milking in less time." Geo. Barthels, Mishi-

(Concluded on page 16.)

LET ME HELP YOU GET AHEAD

Auto-Tractor Men Needed
$75 to $300 Per Month

Automobile and tractor owners must have help—to run and save their machines. The world today is dependent on gas engine and tractor mechanics.

ARE YOU READY FOR A JOB?

I can make you ready in seven weeks to earn $75 to $300 monthly. My school equipped with everything from vulcanizing and welding machines to twin six motors and big tractors for you to work on—not to look on. All instructors are men with years of experience. Tuition less than month's salary after you finish. Within reach of every man, young or old. Complete tractor course without extra cost. Learn here and be a success.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Adjusting Stromberg Carburetor.

Give detailed instructions on the adjustment of the Stromberg carburetor of the Oakland eight-cylinder Model 50 automobile. What is the cause of difficult starting when there is plenty of gasoline in the float chamber? When the motor is cold, priming is necessary for starting. Why does the motor, when cold, choke down when the throttle is opened quickly? At very low speeds, the motor pops back in the carburetor, but it improves when warmed up.

Answer.—The Stromberg carburetor has a high speed and a low speed adjustment. The high speed adjustment is the small knurled nut over the air valve. The low speed adjustment is the large knurled nut under the air valve. To adjust this carburetor, proceed as follows: With the motor at rest set the high speed nut so that the spring above the valve is not only free, but has one-sixteenth of an inch end play. Adjust the low speed nut so that the valve is seated lightly. Start the motor after closing the choker valve in the air horn. Open the choker as soon as the motor has started. If the motor does not start after several turns, open the choker while cranking.

Do not adjust the carburetor until the motor is thoroughly warmed up. With spark detarded, adjust the slow speed nut up and down until the motor runs smoothly at low speed. To test the adjustment, open the air valve slightly by pressing on the top of the plunger above the valve. If the motor then speeds up the mixture is too rich, and the low speed nut should be screwed down so as to put less tension on the spring under the valve. If the engine dies down the mixture is too lean and the low speed nut should be turned to the right. Having properly set the low speed adjustment, do not change it while making the high speed adjustment. To adjust for high speed advance the spark to normal position and open the throttle gradually. If the motor backfires through the carburetor the mixture is too lean, and the high speed nut over the air valve should be turned to the left. If black smoke comes from the exhaust the mixture is too rich and the high speed nut should be turned to the right. Turning either adjusting nut up means a richer mixture; turning either nut down means a leaner mixture. If you have a hot-air pipe, open the shutter near the choke valve in summer and close it in winter.

When a motor is cold the gasoline does not vaporize readily and part of it condenses on the cold walls of the intake manifold. Therefore, more gasoline is required than when running after the motor is warmed up. This additional gas may be furnished for starting by priming the cylinders through pet cocks or by depressing the carburetor float so as to flood the carburetor if the carburetor is provided with this priming device. It is evident that your carburetor is adjusted for too lean a mixture and should be readjusted as outlined above.

Electrical Equipment of Automobiles.

Is it practical to place a storage battery in a Ford car for lighting and have it charged in town? Explain the action of the generator, storage battery and starter in a large car. Is the generator the same as a magneto, and is it driven by the engine?

Answer.—It is practical to light a Ford car from a storage battery charged from an outside source, but if the lights are used very much it will be found to be rather expensive.

The generator is a small electric dynamo. Its field may be either permanent or electro magnets, the latter being the usual practice. The armature of the generator is geared direct to the motor. The current from the generator flows to the storage battery, an automatic cutout being placed betwen the battery and the generator so that the current from the battery cannot flow back through the generator when the motor is stopped. The ignition system is connected to the battery so that it may be operated either from the battery or from the current direct from the generator. The starter is a small electric motor. It has a small gear on the end of the armature shaft that meshes with a large gear cut on the flywheel rim. Pressing on the starter button pushes the starter pinion into mesh with the gear on the flywheel and also closes a switch between the battery and the starter motor. As soon as the motor starts the starter pinion slips out of mesh so that the starter motor only runs while the motor is being started.

Some systems combine the generator and starter into one unit, but the present practice is to have both a generator and a motor. The generator is not the same as an ordinary magneto.

Care of Auto in Cold Weather.

The time of year has arrived when steps should be taken to protect the storage battery and radiator from freezing. The storage battery will take care of itself if kept properly charged, but even if the car is idle the battery sho 'd be given a light charge every month to make up for leakage and stir up the electrolyte. The temperature at which a battery will freeze depends upon the specific gravity of the electrolyte. The following table gives the freezing points for several specific gravities:

Specific gravity	Freezing point
1.050	27 degrees above zero
1.100	19 " " "
1.150	5 " " "
1.200	15 " below "
1.250	60 " " "

As the specific gravity of even a half-charged battery is above 1.200, it will be seen from the above table that there is no danger from freezing if the battery is kept well charged. The above table is taken from a chart published by the Willard Storage Battery Company.

If the car is to be in use during the cold weather an anti-freeze solution should be used in the radiator. A popular solution consists of 60 per cent water, 30 per cent alcohol and 10 per cent glycerine. This solution freezes at 8 degrees below zero. A solution of 20 per cent alcohol and 80 per cent water freezes at 15 degrees above zero. A solution of 50 per cent alcohol freezes at 15 degrees below zero. Alcohol evaporates more rapidly than water; therefore, use at least as much alcohol as water when re lling the radiator.

It is usually best to use a lighter oil in winter than in summer. When starting, run the motor slowly until it warms up and the oil begins to circulate well.

If the car is to be stored for the winter jack up the wheels so as to take the weight of the car off the tires. It is best to remove the tires, sprinkle them with sulphur or soapstone and wrap them with paper or canvas. They should be stored in a room where the temperatures will not be extreme.

Curing a Missing Front Cylinder.

Is it advisable to put a Stromberg carburetor on a Ford car? Perhaps there are different ways of fixing Ford cars when the spark plug in the front cylinder oils up and begins to miss. I have a Ford Model 1916 touring car which did this every twelve or fourteen miles. We got disgusted with it and finally changed the carburetor for a leaner mixture. This solved the problem for eight months, when the carburetor adjustment was accidently moved. Then it began missing again. Lately we have adjusted the carburetor back to the correct position and have installed a leak-proof ring in the lower groove of the piston. Since then it has not missed once, no matter how much oil is carried in the crank case.

Answer.—The Stromberg carburetor is a good carburetor. The choice of a carburetor is a matter of individual choice, as there are many good carburetors. It may be, as suggested above, that too much fuel as well as too much oil may be the cause, or part of it at least, of the front cylinder missing. Before taking out the piston and grooving it as suggested in a recent issue it would be advisable to make sure that the carburetor adjustment is correct.

Using a Small Steam Engine.

I have an old upright steam engine that has not been used very much. Is there any way that I could use this engine for a stump puller? The engine has two eccentrics. The cylinder is four inches diameter and the stroke is six inches. Can this engine be made to run a cross-cut drag saw like you recently illustrated?

Answer.—We do not believe that this engine could be used very successfully for pulling stumps. It would not be portable enough. It could be used for sawing wood, cutting feed, shelling corn, etc. If your valves are in good condition this engine should develop at least six horse power with eighty pounds of steam.

When Overhauling

Examine the piston rings. They're the most important factors in power production.
Insure yourself during the coming busy season against power shortage and high operating cost by putting in a set of

McQUAY-NORRIS
LEAK-PROOF
PISTON RINGS

You can get them in exact sizes to fit any make or type of engine. Also in all over-sizes, both widths and diameters.
Get the Genuine. No imitations or substitutes can equal Genuine LEAK-PROOF Rings in efficiency or durability. Ask for them by the makers' name—McQuay-Norris LEAK-PROOF Piston Rings.
All garage and repair men can give you immediate service on them. If you have any difficulty getting them, write us. We'll see you are supplied.

WAUKESHA COUNT
WAUKESHA,

Cande De Kol Westview, 28 lbs. 7 days, 910 lbs. butter, 21,000 lbs. milk in a year and bred to Dutchland Creamelle Sir Ascalon. Consigned by S. A. Baird & Son, Waukesha, Wis.

A five-month-old 29.97-lb. son of Admiral Walker Prilly, whose dam had 32 lbs. and was the first cow in the United States to have five records above 29 lbs. Consigned by Gustave Pabst, Dousman, Wis.

QUALITY IS THE DISTINGUISH

The highest record young bulls from the best Waukesha county H R. O. cows—cows with records up to 28 lbs. in 7 days, 910 lbs. butter breeding is liberally represented, as indicated by the following briefs fr

S. A. BAIRD & SON — **WAUKESHA, WISCONSIN**

See Illustration No. 1.

We are consigning the best two A. R. O. cows in our herd, in addition to a son of Dutchland Creamelle Sir Ascalon. Cande De Kol Westview (see cut) is a grand individual and has 28 lbs. in 7 days, 910 lbs. butter and 21,000 lbs. milk in a year. Myretta Korndyke De Kol is likewise a splendid individual, having 24.78 lbs. in 7 days, 754 lbs. butter and 17,000 lbs. milk in a year. Both cows are due to freshen in December to Dutchland Creamelle Sir Ascalon, whose five nearest dams average 1,000 lbs. butter and 27,000 lbs. milk.

GUSTAVE PABST — **DOUSMAN, WISCONSIN**

See Illustration No. 2.

Our 29.97-lb. bull calf is by Admiral Walker Prilly, a 32-lb. bull that formerly stood at the head of the well-known Stephenson herd. His dam, a 32-lb. four year old, won $131.50 in association prizes and was the first cow in the U. S. to make five records above 29 lbs. The dam of our calf, Zerma Pride, has to her credit 29.97 lbs. 7 years, 27.54 lbs. 5 years and 20.15 lbs. 4 years. The three nearest dams of the calf average 30.22 lbs.

D. J. HOWELL — **WAUKESHA, WISCONSIN**

See Illustration No. 3.

We are consigning a choice 23-lb. two-year-old heifer by a 29-lb. sire bred to Maple Crest De Kol 2d due to freshen shortly after the sale. Also a 17-lb. three year old bred to the same sire and a 24-lb. son of Maple Crest De Kol 2d.

E. B. WATROUS — **TROY CENTER, WISCONSIN**

See Illustration No. 4.

We have decided to consign a young son of our state record junior four year old, Aaltje Johanna, 28.57 lbs., as well as 10 yearling heifers out of tested daughters of Aaltje Salo Johanna Pontiac, which carried 50 per cent of the blood of Segis Fayne Johanna, and a 16-lb. two year old and 21-lb. three year old bred to Hillvale Sir Ormsby.

J. C. WILTON — **EAGLE, WISCONSIN**

See Illustration No. 5.

We are consigning Daisy Sendt Korndyke 2d, a two-year-old heifer sired by Ideal De Kol of Rock that is a beauty and four young mature cows fresh about sale time. One of them produced 600 lbs. butter last year in the East Troy Cow Testing Association.

Consignors not heretofore mentioned are as follows: F. W. Andrews and C. J. Will.

SALE BEGINS AT

Terms and Conditions of Sale—All animals of breeding age are inspected for fitness by a committee of three. Culls and inferior an tuberculin tested, under the supervision of the Wisconsin Live Stock S jamin, auctioneers. S. T. Wood in box.

WAUKESHA COUNTY HOLSTEIN BREEDERS' ASSOCIATION

Two-year-old heifer of a 29-lb. bull, due to freshen shortly after sale to Maple Crest King De Kol 2d. A worthy Waukesha county sire. Consigned by D. J. Howell, Waukesha, Wis.

The 28.57-lb. bull calf of Aaltje Johanna, the state record four and a half year old, developed by Mr. Watrous, who is also consigning a 26.37-lb. bull calf and five yearling daughters of Aaltje Salo Johanna Pontiac. Consigned by E. B. Watrous, Troy Center, Wis.

Daisy Sendt Korndyke 2d, two-year-old heifer sired by Ideal De Kol of Rock, that is by Mutual Piebe De Kol and out of Ideal De Kol Wit, 24.43 lbs. 7 days, 569.95 lbs. butter in 263 days. Consigned by J. C. Wilton, Eagle, Wis.

HOLSTEIN SALE
VIS., NOV. 16

G FEATURE OF THIS SALE

in herds are consigned, as well as these breeders' choicest A. 1,000 lbs. milk in a year. Likewise the best and most popular he leading consignments:

) PABST — **OCONOMOWOC, WISCONSIN**

See Illustration No. 10.

ır 31.41-lb. bull calf we are consigning is one of the best bulls ave ever bred. He is a well-marked, handsome individual sired ing Pontiac Champion (62 A. R. O. daughters) and one of the ıg A. R. O. sons of the great King of the Pontiacs, that has more daughters and more A. R. O. daughters than any bull, living or The dam of our calf, Pabst Hengerveld Colanthus, is one of reatest cows in our herd, having 31.41 lbs. in 7 days, 873 lbs. r and 20,714 lbs. milk in a year.

IATION STOCK FARMS — **OCONOMOWOC, WISCONSIN**

See Illustration No. 9.

ır consignment includes a 26-lb. son of Johanna McKinley Segis an Ormsby-bred cow carrying 50 per cent of the blood of Sir by Hengerveld De Kol.

son and daughter of Rag Apple Korndyke 8th, from daughters ntiac Korndyke.

grandson of Colantha Johanna Lad from a 27-lb. three-and-one-ear-old daughter of the great show bull, Ollie Johanna Sir Fayne. females safely in calf to Beauty Pietertje Prince, the 32-lb. sire 28 A. R. O. daughters, 8 with records from 25 to 30 lbs.

cott, "If I had to be without a machine I would not keep any cows."

The honors for the high-producing cow go this month to Ole Borgen, of the Amherst and Nelsonville Association. One of his five-year-old grade Holsteins made 67.2 pounds of fat. The fact that Mr. Borgen has been a member of the local association for the last three years is the main reason he has such high-producing cows. Production in all the associations was low, yet there were 493 cows out of 18,183 reported tested that produced over forty pounds of fat during the month, the average of these high cows being 52.9 pounds of fat.

The Langlade County Association in Upper Wisconsin has not only the high herd average for the state, but also the thirty-three cows producing over forty pounds of fat, and thus leads the state in this respect. A herd of grade Holsteins owned by Wm. Borcher has an average of 1,031.3 pounds of milk and 42.1 pounds of fat.

"Do all the good you can, for as many as you can, as often as you can" is the creed of Jack Coleman, tester in the Bear Creek Association. He keeps a list of all stock, machinery, etc., that each member has for sale or exchange and in this way during his monthly visits has been able to make a number of sales and exchanges of benefit to both the buyer and the seller. He is the middleman, but he does not take the middleman's profits, for he considers this is but one of the ways that a tester can be of value to the members of an association.

"They steal all they can when they test;" "That is how he makes the big overrun;" "He does the testing with a lead pencil;" these are some of the expressions heard in regard to the testing of milk and cream at the factory. But in sections where there are cow-testing associations there is seldom such complaint. The cheesemaker or the buttermaker can shift that responsibility to a disinterested and impartial person—the cow tester in the local cow-testing association. In many Wisconsin associations testers are now hired by the cheese factories to test the milk of the patrons, the plan giving the patrons an accurate test and relieving the cheesemaker of suspicion or criticism.

Present-day competition makes a strenuous race for the unfit. Feed prices and labor shortage are seeing to it that only the fit survive. Reports from associations show that last month forty-three low-producing cows could not stand the pace set by the "workers" and were sold to the butcher. In many communities these unprofitable and low-producing cows are not called "boarder" cows, but "guest" cows. During six months of the Wolf River Association thirty-one unwelcome "guests" were asked to leave.

Does it pay to feed grain?

Some dairymen say "No," others say "Yes," while most of them do not know. About 2,500 dairymen in Wisconsin can answer the question satisfactorily to themselves, because this number is in cow-testing associations and keep account of the feed consumed and the milk and fat produced. The milk record, the feed record and the Babcock test can answer the question. If the feed is not bought right the cows are handicapped to that extent. Many of the associations are buying feed in car lots. During the past month seventeen carloads of feed have been bought, Cambridge getting three; Door county, three; Fox River Valley, two; Shawano county, one; Waupaca and Sheridan, one; Wolf River, four, and Mishicot, three carloads.

In some cheese factory sections and about some condenseries we sometimes hear the statement, "I don't believe in the test," from men who believe that "ignorance is bliss." Yet many cheese factories are changing to the payment for milk on the fat content. Herbert Molter, tester in the Cedar Grove Association, tested at the condensery for the 240 patrons and they were paid on the test for the first time in the history of the concern.

The value of the cow-testing association is shown not only in the profit column, but in the fact that it makes the dairying an interesting business. Herman Snoyendor, of the Happy Valley Association, said, "After I joined the cow-testing association, I certainly had no trouble in getting the boys interested in the dairy business."

Some dairymen have difficulty in selling their surplus stock at satisfactory prices; especially is this true when the stock are all grades. However, if he has impartial records of feed cost and milk and fat production, he will have little or no difficulty. Herman Vetter, of the East Fond du Lac Association, says, "The cow-testing association records increased the sale price of my stock $20 per head."

BESSIE LIPSTZ, WISCONSIN'S FIRST WOMAN TESTER, OUT ON HER ROUTE.

Scandinavia Cow-Testing Association.

To the Editor:—Eleven cows qualified for the forty-pound honor roll in the Scandinavia Cow-Testing Association for September. Out of 504 cows on test 416 were passed this month. Eleven were sold as unprofitable and the remainder are standing dry. John Vig's herd of grade Guernseys held first place in herd production, having an average of 560 pounds of milk, testing 5.2 per cent and making 29.3 pounds butterfat per cow. A registered Holstein, Lady, captured all honors for high production with 1,778 pounds of milk, testing 3.7 per cent and making 62.2 pounds butter fat. Her stable mate, Champion, gave her a close race. This cow, Champion, holds the distinction of being a high cow for three months in succession. October 1st finds the majority feeding concentrates. We have started a movement to secure the community tuberculin test, as outlined in Chapter 508 of the laws of 1917. The forty-five-pound list for September follows:

Owner, name and breed.	Age.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
S. D. Shambeau				
Lady, R. H.	4	1788	3.7	66.2
Champion, G. H.	4	1233	5.2	64.1
Canary, R. H.	3	1242	3.7	46.0
Johan Vig				
Nellie, G. G.	8	1148	5.0	57.4

H. R. BREWSTER, Official Tester.

Wolf River Association.

To the Editor:—Since the Wolf River Cow-Testing Association, Kewaunee county, was organized last April with Fred Pfueler as official tester, thirty-one cows have been discarded as physically and temperamentally unfit. There are many cows would produce more if more generously fed. It is a business necessity and a patriotic duty of every dairyman to keep records of production and feed costs for every cow. The forty-five-pound cows for the month of September were as follows:

Owner, name and breed.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
Henry Hartmann			
Pearl, Grade Guernsey	1173	5.5	64.5
Mary, Grade Holstein	1089	4.4	47.9
Nina, Grade Holstein	1222	3.9	47.6
Mabel, Native	1137	4.0	45.5
John Jakubovsky			
Spot, Grade Holstein	1096	4.8	52.6
Henry Wessel			
Bluhm, Native	1042	4.4	45.8
Stearn, Native	1074	4.2	45.1

Reedsburg Association.

To the Editor:—Following is the forty-five-pound list for the Reedsburg (Sauk county) Cow-Testing Association for the thirty-day period ending September 30th:

Owner, name and breed.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
Conrad Kruse			
Korndyke, R. H.	1284	3.6	46.2
H. W. Meyer			
Lucy	873	5.2	45.4
Juty	1200	3.9	46.8

EMMANUEL PETERSON, Official Tester.
E. H. KORNECKE, Secretary.

The federal department of agriculture at Washington estimates that for a family of five, including two adults and three children, there should be stored for each month of the winter season the following: Irish potatoes, one bushel; carrots, turnips and parsnips (together) one-half bushel; canned vegetables, twenty-five quarts; canned fruit and preserves, twenty quarts. Multiply these figures by the number of months before next season's crop begins to come in and see whether your family is provided for.

A good dairy sire should be bred for production and capable of producing daughters better than their dams.

Ask your neighbor to subscribe for The Wisconsin Farmer.

The Cow's Health—First of All

To think of the milk yield first and the cow's health afterward is putting the cart before the horse. Many "poor milkers" only need to have their systems working properly to become good producers.

KOW-KURE, the great cow medicine, makes cows healthy and *keeps* them healthy. Working on the digestive and genital organs, it is a prompt, sure remedy for Abortion, Barrenness, Retained Afterbirth, Scouring, Lost Appetite and Bunches. Try KOW-KURE; druggists and feed dealers sell it—55c and $1.10 packages.

Write for "The Home Cow Doctor," free.

DAIRY ASSOCIATION CO., Lyndonville, Vt.

COW BOY SURE HEATER for STOCK TANKS

DON'T WASTE GRAIN

SAVE IT this winter by heating the water for your stock with Coal, Wood or Cobs in a

COW BOY TANK HEATER

Quickest to heat; strongest draft; adjustable grates; ashes removed without disturbing fire; keeps fire 24 hrs. **Absolutely Safe;** pays for itself in 2 months with 4 cows; **Self-Sinking;** can be used in Wood, Steel or Concrete Tanks of any size. Most reliable, practical, efficient and durable Tank Heater manufactured.

"Purchased 3 of your Tank Heaters last Winter, worked very satisfactorily and are well worth their cost. Every Stockman should use one." (Signed) W. H. PEW, Professor of Animal Husbandry, Iowa State College, Ames, Iowa

KENDALL'S SPAVIN TREATMENT

The old reliable remedy for curb, splint, bony growths, ringbone, spavin or other lameness. 40 years of remarkable results. $1 a bottle, 6 for $5. At all drug stores. Ask for Free Book, "Treatise on the Horse." Dr. B. J. Kendall Co., Enosburg Falls, Vt.

Grind Corn -Cob and All

Don't *waste* feed! It costs you money and keeps food from the hungry world. Save to sell! Get full value of the corn you feed by grinding ear corn to corn and cob meal with a

DIAMOND CORN AND COB GRINDER

These sturdy, powerful, fast-grinding mills grind ear corn, cob and all or shelled corn and small grains of all kinds.

Diamond No. 24 is a big favorite. Has many features not found in any other mill. Quick relief lever permits buhrs to run free when belt is on and engine running. Safety break-pins prevent damage. End thrust ball bearings, chain oilers and hard grease-cups insure smooth, quiet operation and long life. Improved steel buhrs outlast several sets of ordinary kind.

We also make other types of feed grinders—and the famous "Diamond" saw frames. Write for folder, stating type and size of mill interested in. Also give name of your implement dealer.

NEW WINONA MFG. CO. 816 W. 5th St. WINONA, MINN.

Girls' Club Work at the Potato Show.

Girls' club work will be represented at the largest state potato show ever held, November 19th to 24th, at Madison. For the first time in Wisconsin special prizes are to be awarded for the work of girls' clubs at a potato show. T. L. Bewick and Miss Elizabeth Amery, who are in charge of the state club work, are confident that much can be done to encourage not only greater interest in club work, but greater interest also in potato growing by giving the girls' clubs this opportunity.

Any school or club is eligible to enter. The work will be divided into two sections. First will be the exhibits and secondly there will be demonstrations. Prizes will be awarded in each to the winning club or team.

In the exhibits the best collection of ten kinds of cooked food made wholly or partly from potatoes or potato starch will win the prize. The aim is to show the large variety of uses potatoes and potato starch can be put to as a food. A bulletin previously issued by the college of agriculture, "Recipes for the Use of Potatoes and Homemade Starch," will serve as an able guide to the young cooks who wish to enter. All exhibits must be in place on November 19th by evening. There are special show cases provided for the exhibit where each group will be able to display entries to the best advantage.

As prizes $5 in cash will be awarded to the winner, $3 to the second prize and $2 to the third prize. All schools or clubs entering an exhibit, regardless of their ability to take first place, will receive one bushel of seed potatoes which are to be used in next year's club work.

In the demonstrations, teams of three girls with a leader will compete on the afternoons of November 21st, 22d and 23d at a time assigned by Miss Amery. All teams must appear clad in white aprons and caps with the club emblem or "Hoover outfits." They will demonstrate home starch making and cook at least one product showing the use of potato starch or cooked potato as a wheat substitute, besides showing the use of potatoes in soup, potatoes as vegetables or potatoes combined with meat or meat substitute. There will be plenty of utensils, such as stove, table and materials necessary for the demonstration furnished by the college.

The leader will be responsible for the team. The team will appoint one as a speaker and the other two members will demonstrate how the work is to be done. All work is to be planned so that it will be finished within an hour. Again all teams entering here irrespective of their other winnings, will receive a bushel of seed potatoes. A first prize of $3 and a second prize of $2 will be awarded to the winners.

The teams will be scored on the appearance of the members, neatness of dress, skill, arrangement of work, team work and the appeal they make to the crowd while demonstrating and speaking.

The innovation is praiseworthy and has every chance of being favorably received by the eager girl workers of the state provided the authorities give it every bit of coöperation and help that is needed.

Facts on Hemp Industry.

A. H. Wright, hemp specialist at the college of agriculture, who has just returned from an extensive tour of the hemp growing regions of Kentucky, Ohio, Missouri, Indiana and Washington, is convinced that Wisconsin's hemp industry is better protected and the producers more able to handle the crop than is the case in other hemp sections of the United States. Wisconsin has increased her hemp acreage from 1,200 acres in 1916 to 7,000 acres in 1917. This is because the Wisconsin growers have confined their greatest efforts at hemp production within rather restricted areas.

Community effort and the community spirit are essential to the successful growing of hemp anywhere. The scattering of the hemp acreage results in much loss through inability of obtaining help to handle the crop to advantage when it is necessary.

Wisconsin hemp, according to Mr. Wright, is for the greater part marketed as "rough hemp" and is bought

A. H. WRIGHT, HEMP SPECIALIST, WISCONSIN AGRICULTURAL COLLEGE.

by the eastern spinning mills located in Massachusetts, New York and other states. The 1916 crop ranged between 13 and 15 cents a pound on the market, but as the 1917 crop has not yet been broken and will not go on the market until spring no estimate of the 1917 price can be made.

There are four plants for the breaking and cleaning of hemp in the state. Each plant is located in the center of a rapidly increasing hemp section. Seven more plants have been planned besides the four already existing, which are respectively the Rock River Hemp Mills at Waupun, the Matt Rens plant between Waupun and Brandon, the Wisconsin Hemp Company at Brandon and the Badger Hemp Company at Fairwater.

Mr. Wright's trip to the hemp sections in the United States was made in the interest of the department of agriculture at Washington as well as the Wisconsin College of Agriculture. Considerable time was spent in investigating the revival of seed production in hemp center of Missouri. The question of seed is a very vital one to the hemp industry. Hemp plantations on muck lands were visible in Ohio and Indiana. Here the yield and growth is excellent, but a lack of thickness in the fiber makes the product less valuable commercially.

Wisconsin hemp growers have not been expanding more rapidly than advisable and for this reason their industry is on a much safer basis than is the case in other states. The old motto "Slow but Sure," according to Mr. Wright, is probably the best one our growers could have followed. Without proper preparations for putting in the crop and harvesting the product, hemp is easily an unsatisfactory enterprise. While the cost of putting in the crop ranges between $25 and $35, a good harvest handled without unnecessary losses ought to return gross approximately $100 per acre. Where this is the case hemp growing is worth while.

Driver Agents Wanted

Drive and demonstrate the Bush Car. Pay for it out of your commissions on sales. My agents are making money. Shipments are prompt. Bush Cars guaranteed or money back. 1918 models ready. Write at once for my 44-page catalog and all particulars. Address J. H. Bush, Pres. Dept. H-BH Chicago, Illinois

Home-Mixed Flours.

The use of flours which contain more or less bran is sometimes advisable both for the sake of the variety which they give to the diet and because of the mineral substances and growth-regulating substances these flours contain. Farmers' Bulletin 87, of the United States Department of Agriculture, "Bread and Bread Making," includes, in addition to white-bread recipes, a number for home-made bread from whole wheat or graham flour, from home-ground flour, from rye, rolled oats, etc. These are as follows:

Whole Wheat or Graham Bread.—One and one-half cups lukewarm milk, three tablespoons brown sugar, one and one-fourth teaspoons salt, three cups whole wheat or graham flour, one-half yeast cake.

Scald the milk, together with the sugar and salt. When lukewarm, add the yeast, mixing it first with a little of the milk. Add the flour, beat well, and let it double its volume. Beat it thoroughly, put into a pan, and let it rise. In a pan of standard size it should come nearly to the top.

The above recipe may be used in preparing bread from home-ground meal. There are many homes, particularly in the country, where the housewife can obtain unground wheat at moderate cost. If ground in the ordinary coffee mill, such wheat makes a coarse bread, not very light in texture, but of such good flavor that it may well be used occasionally to give variety to the diet. It is useful, too, in places where good bran cannot be obtained easily and where coarse breads are desired as a means of preventing constipation. In making such bread with a view to economy the housekeeper should compute what it will cost per loaf, including labor and fuel, as compared with other breads she makes. Skim milk instead of whole milk can be used; homemade yeast, either liquid or dry cake, is a possibility, and some might like the bread with less sugar or unsweetened. Another recipe which has been worked out follows:

Home-Ground Wheat Bread.—One and one-fourth cups water or skim milk, one and one-fourth teaspoons salt, one tablespoon sugar, three cups home-ground wheat flour, one-half cake dry yeast, or one gill liquid yeast.

Set a sponge at night, using half of the flour. In the morning add the rest of the flour, beat well, put into a greased pan, allow to rise until it doubles its bulk, and bake.

Corn Meal and Wheat Bread.—One and one-half cups milk, water, or a mixture of the two, one-half cake compressed yeast, or one and one-fourth cups milk, water or a mixture of the two, one-fourth cup liquid yeast, one and one-half teaspoons salt, one tablespoon sugar, butter (if used), one tablespoon, one cup corn meal, two cups wheat flour.

Pour one and one-fourth cups of the water over the corn meal, salt, sugar, and fat (if used), and heat the mixture gradually to the boiling point or nearly to it and cook twenty minutes. This cooking can best be done in a double boiler. The water is sufficient only to soften the meal a little. Allow the meal to cool to about the temperature of the room and add the yeast, mixed with the rest of the water (one-fourth cup), or the one-fourth cup of liquid yeast. Mold thoroughly, let rise until it doubles its bulk, make into a loaf, place in a pan of standard size, allow to rise until it nearly fills the pan, and bake forty-five or fifty minutes.

Rice Bread.—One cup lukewarm water, milk, or a mixture of the two, one cup uncooked rice, one and one-fouth teaspoons salt, one tablespoon sugar, butter (if used), one tablespoon or less, one-half cake compressed yeast, two cups wheat flour.

Steam the rice with one-half of the liquid until it is soft. This is done better in a steamer than in a double boiler, for the liquid is so small in amount that the rice does not become soft readily and the presence of the steam helps. Put the sugar, salt and fat (if used) into the mixing bowl and pour over them the remaining liquid (one-half cup). When the mixture has become lukewarm add the yeast and one-half cup of flour. Allow this sponge to rise until very light. Add the boiled rice, which should have been cooled until lukewarm, and the rest of the flour. This dough is so thick that some pressure is required to work in the last portions of the flour. Allow the dough to rise until it has doubled its bulk, form into a loaf, place in a pan of standard size, allow it to rise until it nearly reaches the top of the pan, and bake.

Rye Bread.—One quart milk, two tablespoons sugar, four teaspoons salt, two tablespoons butter, one cake compressed yeast, three cupfuls flour (one cup being wheat and the remaining rye).

Follow the directions for making wheat bread according to the short process until after the bread has been molded the second time. At this point the dough should be placed in a six-quart bowl lined with a cloth into which flour has been rubbed. When the dought has risen to the top of the bowl turn out on a hot sheet iron (a dripping pan inverted will do), over which one tablespoon of flour has been sprinkled, and put it immediately into a very hot oven. After ten minutes lower the temperature somewhat and bake for one hour. This recipe is a modification of an old German household method of making rye bread.

Rolled Oats Bread.—Two cups boiling water, one-half cup brown sugar, two teaspoons salt, one yeast cake, one-fourth cup lukewarm water, one and one-half cups rolled oats, five cups flour.

Dissolve the yeast cake in the lukewarm water. Pour the boiling water over the rolled oats, salt and sugar, and let stand until lukewarm; add the dissolved yeast and flour. Let rise until very light, beat thoroughly, and turn into two buttered bread pans. When the loaves have doubled their volume bake them an hour in a moderate oven.

Fireplace For the Farm Home.

The farmer who plans a new home should not forget that after awhile winter is coming and that he should make his home cozy by putting in a fireplace, suggests Dr. J. D. Walters, professor of architecture in the agricultural college.

Although the fireplace is said to be wasteful, requires much fuel and attention, and is dirty, says Doctor Walters, it has many points in its favor and should have a place in the living room of every farm home. It affords the only method of ventilating rooms successfully, except the electric fan.

The ancient fireplace was built of sandstone and brick and had a large enough opening not only for stove wood, but for huge logs. The modern fireplace is much smaller and consists of a cast-iron box, with a back made of fire brick. The top contains two air flues that can be opened or closed. All that the chimney maker has to do is to set the box in place and wall it in.

There are many different styles of mantels on the market, ranging in price from $15 to $150. A neat, well-constructed mantel of hard-burned brick costs but $15 and is as ornamental, if properly built, as one costing ten times that much.

Dr. Walters does not advise trying to heat the farmhouse with a fireplace alone. The best results will be obtained if it is used in connection with a hot air or water heating plant, as ventilation is not provided by these devices.

Cooking Dried Fruits and Vegetables.

The palatability of dried foods depends largely upon the manner in which they are prepared for serving. In the process of drying fruits and vegetables most of the water is removed. This water must be supplied in the process of preparation. The best way to accomplish this is by soaking the products several hours, such as overnight, before they are cooked. The product should always be cooked in the water in which it had been soaked, otherwise much food material will be lost.

In cooking dried fruits and vegetables the slower and longer the process the better the results. The long, slow cooking not only makes a much more plump and attractive looking product, but lends a better flavor.

Directions for cooking dried fruits and vegetables are summarized as follows:

1. Wash the product. 2. Soak several hours to replace the water which has been dried out. 3. Cook slowly several hours. 4. For fruits use as little water as possible and only a little sugar. 5. If it is a fruit which has a flat taste add a little lemon juice or a little cream of tartar. 6. Chopped nuts may be sprinkled in stewed fruit for variety and to increase the food value.

All letters from boys and girls to this department should be sent to office of The Farmer and Stockman, Kansas City, Missouri.

Will Make Money on His Calf.

Dear Young Folks:—This is the first time I have written. I live on a farm of 160 acres. I love to do farm work. This fall I helped my Uncle James haul grain to the elevator at Atkinson, about eight miles from home. We live in Eight Mile. It is called that because it used to be eight miles around the grove.

I have a Holstein heifer that I bought this spring. We got her when feed was short. We turned her on the road where the grass was long. She is big and fat and I expect to get a big price this fall when I sell her. I have four brothers and go one mile to school. I go to the same school as my grandfather. William.

A Nutting Party.

Dear Young Folks:—I am eleven years old, and in the sixth grade at the Miller School. I have two sisters who go to school and two at home. Helen, age 13, is in the eighth grade and agnes is in the second grade. Dorothy and Jane are not old enough to go to school.

We went to the timber this afternoon and got some papaws, hickory nuts, hazelnuts and walnuts. We have a patch of navy beans and expect to have enough to last all winter.

We took some cane to the sorghum mill and got some molasses made. It is real thick and good. My chores are gathering the eggs and getting in the wood. I like riddles. I will close with one. What is the answer? "O" on both ends and "hi" in the middle. Etta.

Anxious for Winter to Come.

Dear Young Folks:—I am a little boy six years old. I live on a 120-acre farm two mils from town. I go to school every day and am in the primer.

I have a pet cat which I named Joe. I have a little colt named Belle. Her mother's name is Pearl. I help my papa pick corn and I like it very much.

We have nine scholars at school. I am glad winter is so near because I like it very much. We have a large sled which my sister, brother and I can all ride on at once.

I like the riddles in the letters very much. I will ask one and then close this letter. What goes around the house and only makes one track? Little Red Head.

My School.

Dear Young Folks:—I am a little girl fourteen years old and I just entered high school this fall. I live on a 120-acre farm. I like to go to high school. There are about seventy scholars in ninth, tenth, eleventh and twelfth grades. About twenty-eight in the ninth grade. My studies are algebra, English, agriculture, music, spelling and domestic science and I like them all very well. Kester.

Uncle Serving Uncle Sam.

Dear Young Folks:—I have just finished reading your little cozy corner, and like it real well. I see that mostly girls write, and they are all about the same age. I am fourteen also. I think I will try Blanche's recipe some time when I bake a cake. I hope I only come out in the Young Folks' page as well as Alice did. I am the oldest sister of two brothers and two sisters.

I have an uncle serving "Uncle Sammy." I am going to see him next week. If this ever reaches the Young Folks I will be there and back. Since my letter seems somewhat longer than the rest, and it being only my first time, will close. Marie.

Recipes.

Rolled Oats Bread.—Scald one cupful rolled oats in one cupful boiling water and allow to stand one hour. Make a sponge of one cupful water, one cake compressed yeast, one teaspoon salt, two tablespoons molasses, two teaspoons shortening, three-fourths cupful flour. Add rolled oat mixture to sponge and then flour to make medium soft dough. Form into loaf and let rise to double its bulk and bake.

Salmon Loaf.—One can of salmon, four tablespoons milk, two eggs, two tablespoons melted butter or other fat, one-half cupful bread crumbs, speck of pepper, one-fourth teaspoon salt, one teaspoon chopped parsley. Rub butter into salmon, put crumbs into the beaten eggs, mix all together, season, steam one hour or bake twenty minutes. Serve with a sauce made of one cupful milk, two tablespoons cornstarch, one tablespoon butter, juice from the salmon, speck of salt. Cook until it thickens.

Corn Oysters.—To two cupfuls corn, chopped fine, add one well-beaten egg, one-fourth cupful barley flour, one tablespoon milk. Season highly with salt and pepper. Drop by spoonfuls (about the size of large oysters) and fry in deep fat, or cook on a well-greased griddle.

Sweet Potato Trifles.—Four boiled sweet potatoes, one cupful milk, one teaspoon sugar, one-half teaspoon cinnamon, juice of one lemon. Press potatoes through a ricer or colander. Mix thoroughly with other ingredients. Form the mixture in diamond shapes on a baking sheet and brown in a hot oven. Serve with chicken or turkey.

The Comforts of Good Plumbing

cannot be measured by cost. They represent a value beyond estimate—a value that *you* can enjoy by remodeling your old home as well as when you build a new one. Putting running water in the house should be followed by

"Standard" Plumbing Fixtures For the Home

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Enclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date fall and winter 1917-1918 catalog, containing 550 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating thirty of the various simple stitches), all valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

1644—Children's rompers, with sleeve in either of two lengths. The pattern is cut in 5 sizes: 1, 2, 3, 4 and 5 years. It requires 3 yards of 27-inch material for a 4-year size.

1937—A charming junior dress for party, dancing and best wear. The pattern is cut in 3 sizes: 12, 14 and 16 years. It requires 3¼ yards for the dress and 3 yards for the overblouse, for a 14-year size, in 27-inch material.

1970—Ladies' kimono. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5⅝ yards of 44-inch material for a medium size.

2054—Ladies' house dress, with sleeve in wrist or elbow length. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 5¾ yards of 44-inch material for a 36-inch size.

2100—Ladies' combination garment of corset cover and drawers. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3⅞ yards of 36-inch material for a 36-inch size.

2258—A pretty waist. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 will require 3⅜ yards of 27-inch material.

2261—A smart gown for home or afternoon wear. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 5⅛ yards of 46-inch material.

2262—A very smart style for the growing girl. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 requires 4¼ yards of 36-inch material.

2273—A dainty set for dolly. The pattern, which includes all styles illustrated, is cut in 6 sizes: For dolls, 16, 18, 20, 22, 24 and 26 inches in length. The dress requires 1¼ yards of 27-inch material, the petticoat ½ yard, and the combination ⅝ yard for an 18-inch doll.

2279—An easily-made apron. The pattern is cut in 4 sizes: Small, 32 and 34; medium, 36 and 38; large, 40 and 42, and extra large, 44 and 46 inches bust measure. Size medium will require 2½ yards of 36-inch material.

Waist 2283-Skirt 2282—A stylish costume. The waist pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. The skirt in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. To make this costume in a medium size will require 8 yards of 44-inch material. Two separate patterns, 10 cents for each pattern.

2285—A chic dress for mother's girl. The pattern is cut in 4 sizes: 6, 8, 10, and 12 years. Size 10 requires 3½ yards of 44-inch material.

International Sunday School Lesson.

(By REV. P. B. FITZWATER, D. D., Teacher of English Bible in the Moody Bible Institute of Chicago.)

Lesson for November 4, 1917.

Defeat Through Drunkenness.

(World Temperance Sunday.)

LESSON TEXT—I Kings 20:1-21.

GOLDEN TEXT—Let not him that girdeth on his harness boast himself as he that putteth it off.—I Kings 20:11.

I. Samaria Besieged (vv. 1-12.)

1. By whom (v. 1.)

Benhadad, the Syrian king, accompanied by thirty-two kings, came against Samaria. These thirty-two kings were not allies, but rulers over the neighboring cities—vassal princes.

2. Benhadad's message to Ahab (vv. 2-6).

He offered peace on the most abject and insulting terms. His demands meant more than the exaction of tribute. He overreached himself in this; thus defeating his purpose. He not only demanded tribute money, but the surrender of that which was most vital to Ahab's manhood and self-respect—his wives and children. He thus made a thrust at his tenderest spot. Many a man has been thus aroused to do his duty, who otherwise would have submitted to shameful indignities.

3. Ahab's reply (vv. 4, 7-9.)

His reply was tame and humiliatingly submissive. Perhaps, he thought it only meant the giving of tribute, which he was willing to do in face of Benhadad's overwhelming army. Conciliatory measures were regarded as most prudent. But the peremptory demands of the enemy repeated, awoke Ahab to his senses, and caused him to call together the elders of the land, who counseled against submission. Thus stiffened for the opposition, Ahab refused to make full compliance with his demands.

4. Benhadad's bluster and boasting (v. 10.)

The design of this was to strike terror into the hearts of the king and people. He vows that he will make Samaria a heap of dust, and that this dust will not be sufficient to fill the hands of his army, so overwhelming is the number of his host.

5. Ahab's answer by a proverb (v. 11.)

"Let not him that girdeth on his harness boast himself as he that putteth it off." This is a proverb full of points for all boasters. God's purpose may overrule all man's proud presumptions. "Man proposes, but God disposes." "Pride goeth before destruction, and a haughty spirit before a fall."

6. Readiness for the attack (v.12).

In the full confidence of victory, the Syrian king was giving a banquet to his princes. In the midst of this feasting, the command was given to invade Samaria. Incited by strong drink, he gave not attention to the striking proverb of Ahab. Many have gone to ruin because through the stupor of drunkenness, they have failed to heed proper warnings.

II. A Prophet Sent to Ahab (vv. 13, 14.)

Who the prophet was, we are not told, but why he was sent, is made clear. He brought from God a promise of victory which was to cause Ahab to know Jehovah. It is a marvelous display of God's goodness and grace. Israel deserved the most severe chastisement, but God promised victory for his own sake in order to make his glory known. The agency by which the victory was to be achieved, was the young men, an agency purposely feeble, that the victory might be seen to be of God.

III. Ahab's Victory Over the Syrians (v. 15-21.)

The army of Ahab was but a handful compared with that of the Syrian king (v. 15; cf. v. 10). Benhadad, with confidence in his superior numbers, ordered the young men of Israel to be taken whether they came for peace or war. He, with his princes, continued their drunken debauch. The young men struck right and left, creating great consternation. When the 7,000 reserves joined the young men, a general panic was produced among the Syrians. From the human side, the victory is accounted for by the drunkenness of the Syrians, but from the divine side, we see that God wrought for his own glory. Ahab pursued the Syrians with a great slaughter, but Benhadad escaped. Many have been the defeats which have come through drunkenness; defeats in morals, defeats in religion, defeats in business, defeats in physical endurance. The man who indulges even moderately, has reduced his opportunities of success very greatly. Most of the accidents by automobiles, railroads, etc., are traceable to the use of intoxicating liquors.

Few people, rich or poor, make the most of what they possess. In their anxiety to increase the amount of means for future enjoyment, they are too apt to lose sight of their capability for the present.—Leigh Hunt.

I am sure that it is a duty for all of us to aim at a just appreciation of various points of view, and that we ought to try to understand others rather than to persuade them.—A. C. Benson.

Wisconsin's Seed Wheat Program

Improved Varieties Are Now Being Distributed —Hardiness Important as Well as Yielding Ability.

WISCONSIN will be better prepared to furnish first-class seed wheat to all who want it in 1918 than any other state in the Union. The pedigreed strains of hard winter wheat developed by the Wisconsin Experiment Station, with the aid of the 2,000 farmers belonging to the association of experiment station workers, have proved to be superior to all other varieties available. With rye the problem was not a difficult one, even this year. More than 150,000 bushels of seed rye were located by the station and called to the attention of all those desiring seed rye. This was the pedigreed rye, for the greater part, which has proved a heavy yielder and more profitable than other strains.

The wheat development at the experiment station was interrupted several years ago when most of the seed strains were killed by frost. This gave the project a serious setback and amounted practically to starting the entire work of the profitable strains over again. There has been developed during the last four years, under the direction of Prof. R. A. Moore, two heavy-yielding and adaptable types for Wisconsin soil, however, which are known as the Wisconsin No. 2 and the Wisconsin No. 408. The No. 2 wheat is the Turkey Red wheat and is, roughly speaking, more adaptable to counties south of a line extending across the state from Polk to Shawano county. North of this line the 408 or Bascsa wheat has proved the heavier yielder, and is, therefore, recommended.

When in July of this year the requests were made by the nation for a campaign to increase the wheat acreage in the United States, Wisconsin immediately set to work, and, though there was not enough of the pedigreed wheat in the state to supply even a small portion of our required acreage, there was an opportunity of firmly establishing the pedigreed variety for once and all by a system of proper distribution among men not necessarily members of the experiment association.

Here the bankers of the state, through their farmer-banker committee, offered Professor Moore their cooperation in placing the seeds through local bankers among farmers who were willing and able to carry out the plans of the station. One hundred banks came forward at the first request from Sec. George Bartlett for institutions to handle the seed wheat for their localities. Fully 100 more applied for the opportunity, and Mr. Bartlett, in order to save himself much trouble, wrote a second letter saying that no more could be supplied.

The next step consisted of obtaining from each farmer who applied for seed a pledge which obligated the farmer to report upon the condition of the resulting crop and to reserve the crop for seeding purposes only either for his own or some other grower's needs. The bankers distributing the seed are known as "official distributors" by the Wisconsin Bankers' Association, and the growers will be known as "official growers." The agreement in full reads as follows:

In consideration of being designated by the Wisconsin Bankers' Association as one of its "official growers" of Wisconsin pedigree hard winter wheat, I hereby agree with ..... of ..... that I will properly seed and care for ..... acres, with the seed wheat this day purchased through above bank; that I will report the yield thereof to said bank as soon as grain is threshed; and that I will not only keep such product separate from any other grain, but that I will use said product for seeding purposes the following year, either upon my own farm, or by selling it only to such Wisconsin farmers as will agree to keep the product thereof separate from any other grain until same is sold.

The price paid for the seed was $3.55 per bushel, which was $1 above the prevailing market price. Before any of the seed reached the official grower, however, the seed was tested at the state testing laboratory at Madison and the greatest care was exercised to prevent inferior seed from being distributed.

If all things go well and no damage comes to the crops through frost or otherwise this seed ought to yield, and will very likely yield, in the neighborhood of thirty bushels per acre. The 4,000 bushels distributed by the Wisconsin Bankers' Association will have yielded 80,000 bushels, which again will be used for seed, and after that no difficulty ought to be experienced by any Wisconsin farmer to secure plenty of first-class seed of these improved strains of winter wheat for seeding.

The plan that has been followed is the only sure means of keeping tab on the seed supply without incurring tremendous expense. The banker knows each official grower through frequent association with him. He is right there on the spot to hear the grower's complaint or witness his success. He is not likely to neglect his work, for it is a matter of pride with the banker and not financial remuneration. He is for this reason many times more dependable and efficient than the best traveling representative that could be employed. The bankers are entitled to the thanks of all agricultural interests in Wisconsin for doing this work and the farmers ought to be among the first to let them know of their appreciation.

WISCONSIN RED NO. 2 WHEAT—AVERAGE YIELD 38.5 BUSHELS PER ACRE.

Likes Well-matured Corn for Seed.

To the Editor:—I have three methods of drying seed corn. One method is to tie two ears together with the husks and hang them across a wire. Another method is to put them in a wire rack that has a separate compartment for each ear. These racks hold 100 ears each and are made by an Iowa firm. They are the best thing I have ever seen for drying out seed corn. The other method is to make a rack out of boards. Take a piece of board and saw off two pieces six inches long. Stand them up on end and then take strips 1x2 inches, four, six or eight feet long, and nail on each side of the upright end piece every twelve inches. Then just lay the seed ears crosswise on the 1x2 inch strips.

I would advise all farmers to gather and dry out enough seed to do their next year's planting just as soon as the corn has matured enough so it will not mold or shrivel up. Then if weather conditions are good, no hard freezes, and the corn dries out well, gather a lot more at husking time. Personally I would far rather have a seed ear that matures and dries out on the stalk, nature's way, if weather conditions are all right, than the early gathered seed that is dried out by artificial heat.

Some will say, "Why, if you gather any seed out of the wagon you cannot tell whether it grew on a good stalk or a weak stalk." Now, Mr. Editor, no man, living or dead, ever saw a genuine good seed ear grow on a poor, weak stalk. Corn does not grow that way. It takes a good strong stalk to grow a good seed ear. I never hang seed corn on the fence to dry, as that is like taking a man's shirt off and then have him sleep out of doors. Neither do I hang it in the sun. Either hang it in a driveway or in a corncrib or a regular seed room. I do not believe that seed corn is hurt by cold weather after it is dried out well if it is kept in a good dry place away from moisture. I would far rather have air-dried corn than fire dried. You can easily damage corn in fire drying it, especially if you start the fire too soon and get the seed corn too hot.

In conclusion, would advise all farmers to gather their seed corn at once, dry it out well and store it in a good dry place. And be sure the rats and mice cannot get to it, and also squirrels.

C. E. Russell, Warren county, Ill.

The Big Sensation at the State Fair

By common consent the most interesting exhibit at the State Fair was the

Walsh Harness

People came from all parts of the country to see it, compelling us to keep the exhibit open until dark nearly every night. Every visitor marveled at the enormous strength, simplicity and convenience of the Walsh harness—the harness that fits better, looks better, wears longer and is easier to put on, take off, or adjust than ordinary harness. The Walsh harness is made for hard work and will last about 35 years. Yet the price is the same. It's the only harness in the world that has

NO buckles, NO snaps, NO billets, NO loops, NO holes in the straps and NO wear on the straps.

Inquire immediately at your local dealer's about the Walsh Harness.

WALSH HARNESS CO., Milwaukee, U. S. A.

Waukesha County Holstein Breeders' Association Sale, November 16th, Waukesha, Wisconsin.

THIS company has never been as fortunate as it is this fall in listing high-record animals with high-record backing. More A. R. O. cows as well as choice heifers from A. R. O. cows are included in this offering than ever before. The best and most popular breeding is represented quite plentifully among the various consignments—in short, the distinguishing feature of this sale is quality. All the high-record young bulls in Waukesha county will be offered for sale November 16th, and there are A. R. O. cows with records up to 28 pounds in seven days; 910 pounds of butter and 21,000 pounds of milk in a year. It is the purpose of the association to make these sales annual affairs where people can depend upon purchasing the best blood of the breed with safety. To this end the sale company has spent much time and effort in selecting animals from the most prominent herds throughout Waukesha county that would serve this purpose. Great care has also been taken to see that no culls or inferior animals be consigned. The terms and conditions in this sale are as follows: Animals of breeding age are guaranteed by their consigners to be breeders. Each animal consigned is inspected for fitness by a committee of three. Culls and inferior animals are barred from entry. All animals over six months of age are tuberculin tested under the supervision of the Wisconsin Live Stock Sanitary Board within thirty days prior to sale. Write to the Waukesha County Holstein Breeders' Association or W. L. Baird, Waukesha, Wis., secretary of the association, for catalogs or further information in regard to the sale.—See pages 14 and 15.—Adv.

Fred Pabst's (Oconomowoc, Wis.)

CONSIGNMENT to the Waukesha County Holstein Sale, November 16th. Mr. Pabst this fall is consigning a 31.41-pound bull calf, born March 13, 1917, a full brother to the 31-pound calf, which will be sold at Watertown November 8th and 9th. These calves are sired by King Pontiac Champion, one of the best-known sons of King of the Pontiacs, a bull that has more 30-pound daughters as well as more A. R. O. daughters than any other bull of the breed, living or dead. King Pontiac Champion is also one of the leading A. R. O. bulls in the state of Wisconsin with a list of 62 A. R. O. daughters already to his credit. The dam of the calf consigned to the Waukesha County Sale is Pabst Hengerveld Colanthus, a cow that is unquestionably one of the greatest individuals in Mr. Pabst's large herd. In addition to producing 31.51 pounds of butter from 576.40 pounds milk in seven days, she has produced 873.56 pounds butter and 20,714.90 pounds of milk in a year. She has another semi-official yearly record to her credit of 563 pounds butter in a year and 12,380 pounds milk. The cut of this bull used in the double-page advertisement of the Waukesha County Breeders' Sale appearing in this issue will give a good idea of his individuality and markings.—Adv.

Baird Bros.' (Waukesha, Wis.)

CONSIGNMENT to the Waukesha County Holstein Sale, November 16th. Baird Bros. are consigning one of their best A. R. O. cows when listing Jenny Segis De Kol Burke, a 25.62-pound four-year-old, now on some official yearly work and about to finish a record of 750 pounds of butter and 18,500 pounds of milk. She is due to freshen in March and bred to King Superba, a 34-pound bull, son of Milanhurst America De Kol, the first cow to have an official yearly record. She is recognized by many good judges as being one of the choicest cows in the noted Cabana herd. She also has the distinction of having held seven world's records at the completion of her official yearly record. The illustration of the cow in the double page advertisement in this issue indicates her individuality and enables one to form some estimate of the value of the calf she is carrying.—Adv.

Don't Forget Madsons.

MANY of our readers have seen the Madson Polands at the fairs the past several years and you know that they have produced winners. This year they did not show any hogs owing to circumstances that prevented same, but we will say without fear of contradiction that they have the best lot of pigs this year, they ever raised. They are the most uniform, growthy bunch we have ever seen on the Madson farm and we feel that they will please the prospective buyer. If interested in Polands—either sex—write M. Madson & Sons, Madison, Wis., and please say you saw the advertisement in The Wisconsin Farmer.—Adv.

Smiley Has a Few Good Ones Yet.

WE have just had a letter from Rob't Smiley saying that they have 15 Poland China boars left and some of these are among the best they raised this year. They have two sired by Big Bone Wonder out of a Big Timm bred dam. Two by Major Miller out of an A Wonder-bred dam. One real good one sired by Big Bone Jumbo. Some by Smiley's King, he by Goldengate King. We are glad to recommend this herd of Poland, for the Smileys will send you a boar that will please or none at all. Write Wm. Smiley & Sons, Albany, Wis.—Adv.

A. P. Kaye's (Walworth, Wis.)

CONSIGNMENT to the Waukesha County Holstein Sale, November 16th. Mr. Kaye is consigning a handsome 25.99-pound son of his high-record bull, King Pontiac of Brothertown, a bull whose two nearest dams' average yearly record is higher than any other bull in the state of Wisconsin. His two nearest dams averaged 38.53 pounds of butter in seven days and his three nearest dams averaged 31.22 pounds of butter in seven days. The dam of the calf is Kayewood Molly Korndyke, that is by Colonel Douglas Korndyke, that has 23 A. R. O. daughters, five above 25 pounds and 11 others above 20 pounds. The dam of this calf likewise has a very creditable cow-testing association record to her credit, indicating her ability as a long-distance producer. Mr. Kaye has also consigned a 25-pound cow bred June 16th to King Pontiac of Brothertown. It will be remembered that this bull is a half brother to a number of the high-record bulls through the East, such as King Valdessa and King Dollar. Mr. Kaye's herd was second in the Walworth County Cow-Testing Association last year and produced an average of $120 per cow above feed cost, which we think is a remarkably good showing. Mr. Kaye is consigning several other A. R. O. cows of special merit and his consignment, therefore, is worthy of special inspection.—Adv.

NEXT WEEK'S SALE PROGRAM

Tuesday, November 6	Poland Chinas, Nathan Kintz & Son, Berlin, Wis.
Saturday, November 10	Holstein-Friesians, Joseph Stapleton, North Lake, Wis.

D. J. Howell and Muckleston Bros. (Waukesha, Wis.)

CONSIGNMENT to the Waukesha County Holstein Sale, November 16th. Mr. Howell is consigning a 24-pound son of Maplecrest King De Kol 2d, out of a 24-pound daughter of Hillvale Sir Ormsby; also a two-year-old cow due to freshen shortly after the sale, out of a 23-pound cow and by a 29-pound bull and bred to Maplecrest King De Kol 2d; also 17-pound three-year-old cow bred to the same sire and due to freshen soon after the sale. Muckleston Bros. are consigning five head—four cows and a bull. The bull calf is from their well-known 27-pound cow, Cornucopia Johanna Clothilde, 27.14 pounds butter, 747 pounds milk in seven days, state milk record when made. The calf is sired by Maplecrest King De Kol 2d, a 27.24-pound bull. Muckleston Bros. are also consigning a 19-pound cow, having a 22.85 A. R. O. dam; another 19-pound cow out of a 20-pound dam and a 19-pound three year old out of the 27-pound cow just mentioned. These three females just described are all bred to Maplecrest King De Kol 2d. Muckleston Bros. are also consigning a two-year-old heifer by a 29.6-pound bull and bred to Pabst Blackberry Korndyke, a 31-pound bull by a 38-pound sire.—Adv.

Dellbrook Farm Hampshires.

A. L. DAMON, owner of Dellbrook Farm, Richland Center, Wis., has for sale, 50 Hampshire boars ready for service. They are sired by Progressive Kid, the junior champion of the Indiana, Illinois and southern fairs last year. Some by Dellbrook Maloy, the grand champion of Wisconsin this year. Look Out Lad's Best is also being used in this good herd. He is sired by the noted champion, Look Out Lad, a son of the $5,000 Look Out. These boars are priced for quick sale and satisfaction in every way, is guaranteed. Mr. Damon also has some 90 head of fall pigs priced from $12 up. If you are interested in Hampshires write Damon, for he has the best herd in the Northwest. In writing please mention this publication.—Adv.

Note the H. H. Smith Advertisement.

H. H. SMITH, Baraboo, Wis., starts his Poland China advertisement offering spring pigs of either sex. They are sired by a son of Big Tom, that was a winner in the western shows. Others are by King Wonder by Great Wonder, an A Wonder-bred boar. They are the big-type kind and will make big ones when matured. Write Mr. Smith for details and prices.—Adv.

Don't Overlook the Kintz Poland Sale.

MEN that have received the Nathan Kintz & Son's Poland China sale catalog cannot help but be impressed with the array of breeding as set forth in this booklet. Our attention has never been called to a Wisconsin Poland China sale that contained better or more popular breeding than that found in the Kintz sale. Smooth Big Bone, the sire of numbers 4, 5 and 6, is one of the best breeding boars doing service at the present time. Numbers 13 and 14 are by Big Orange Equal and out of a Big Jumbo dam—how's that for breeding? Another litter by Wonder's Wonder out of an Ohio Giant dam will be an investment. In this you get a combination of A Wonder and Disher's Giant. The catalog is full of these well-bred boars and gilts. Individually the offering is all right and will make good for the men that are fortunate enough to be the owners after the sale. This is the last boar sale of the season to be held in Wisconsin and the men that want big, growthy, big-type boars, should attend this sale or be represented. Breeders of this state should buy the gilts in winter sales and many of the breeders are going to be short on sale material. Kintz & Sons live at Berlin, on the line between Waushara and Green Lake counties and just over the line from Winnebago county. Try to attend this sale in person—the date is Tuesday, November 6th, but if you can't get away, let T. P. Shreve buy a boar or some gilts for you. The Kintz guarantee anything purchased on a mail bid to give satisfaction. Don't forget the date and place.—Adv.

30-Day Boar Bargains.

FOR the next 30 days L. P. Martiny offers Poland China boars at bargain prices. Most of these boars are sired by Big Bone Wonder, in our estimation, the best aged boar in the state of Wisconsin and it was only due to an accident that he was not exhibited at the state fairs. Mr. Martiny now owns one of the best herds of big-type Poland Chinas in the state. He did not mix things up by using a big-type boar on his medium-type sows, but sold out his sows that were not of the breeding that is in demand at the present time and bought the very best big sows of big-type breeding. Big Bone Wonder is in the 1,000-pound class and having been mated to the good sows in the Martiny herd, the spring pigs are above the ordinary. Mr. Martiny's Polands were winners at the fair this year, being the second biggest winner at Milwaukee. The boars that he has for sale are of the same caliber and breeding as those that won at the fairs. The man with the first order gets the choice. Order now and when writing please mention The Wisconsin Farmer.—Adv.

Wilton's (Eagle, Wis.)

CONSIGNMENT to the Waukesha County Holstein Sale, November 16th. Mr. J. C. Wilton, of Eagle, Wis., who has been doing some instructive breeding for a number of years, has decided to consign five cows to the Waukesha County Holstein Sale. One of these cows is Daisy Sendt Korndyke 2d, a two-year-old heifer of exceptional promise, sired by Ideal De Kol of Rock, that in turn is by Mutual Piebe De Kol and out of Ideal De Kol Wit, that has 24.3 pounds at five years with an average test of 3.98 per cent fat. She also has a record of 569.95 pounds butter and 12,836 pounds of milk in 263 days. Count Korndyke Segis, one of Mr. Wilton's former herd sires, is the sire of four other cows, due to freshen about sale time, which Mr. Wilton is consigning. This bull is by Johanna McKinley Segis and out of a 24-pound dam. One of the daughters of this bull is a particularly good individual, having produced 600 pounds butter last year under ordinary conditions while in the East Troy Cow-Testing Association.—Adv.

Short-horn, Shire and Shropshire Dispersion.

A GREAT offering of the above breeds will be dispersed at public auction on November 14th by Wm. Bennington and Clara E. Bennington, administrators of the Bennington estate, Volga, Iowa. The Short-horns are reared entirely on the luxuriant blue grass pastures on the farm and are in better flesh than those sold in most sales. Large, roomy, broad-backed, smooth matrons of true Short-horn character will be found in plenty in this offering. Heifers of the same type are listed. Those who do not know this herd will be agreeably surprised when they see the cattle. Extra good bulls of most fashionable Scotch pedigree have always been used here. The present herd sire sells in the sale. He is the splendid roan two-year-old, Conformation, sired by White Rock (by Whitehall Sultan) dam by Royal's Best, second dam by Imp. Royal Robin, third dam Imp. Clara 59th by Wanderer. The herd bull used before him was Master's Robin by Missie's Robin, dam by Imp. Fancy's Pride, third dam Imp. Missie 136th. The herd bull used previous to Master's Robin was Imp. Clipper's Czar, a Cruickshank Clipper, weighing 2,450 pounds. A number of the best broad-backed matrons in the auction are by this great imported bull. The Shires will meet with the approval of the most critical judges. Eleven are registered and include the seven-year-old imported roan stallion, Heckington Skipper, a ton stallion brought over by the Trumans. Nine registered mares of extreme size and bone, several of them roans by Imp. Heckington Skipper will please any dray horse admirer. Seven grade mares that are real drafters are listed. Forty Shropshires good enough for anyone including an imported ram, 20 ewes, three yearling rams and 16 lambs. The Benningtons are real stockmen and with that inherent instinct along with a naturally adapted stock farm they have accomplished wonders in developing the highest type of pure-bred live stock. See page 25 and write for catalog, mentioning The Wisconsin Farmer.—Adv.

Edgewood Farms, Incorporated.

THE Edgewood Farms incorporated, Pewaukee, Wis., are consigning two splendid bull calves to the Waukesha County Holstein Sale, November 16th. One of these calves is eight months old, sired by Pabst Pontiac Hengerveld De Kol, whose two nearest dams averaged 32.58 pounds. His dam also has the distinction of making two records above 31 pounds; one of them being made with 606 pounds of milk. The dam of this calf is Netherland Nora Johanna, that has a seven-day record of 18.74 pounds butter with 550.7 pounds milk. He is nicely marked, being about half and half, and his two nearest dams average 26.30 pounds, while his six nearest dams average 25.26. Their 11-month-old calf by the same sire and out of a half sister to the dam of the calf just described, has a record of 20.94 pounds butter with 552.5 pounds milk. His dam is also a granddaughter of Sadie Vale Concordia Paul. She is a large, strong, well-made cow, that produced as high as 87 pounds of milk while on test. The six nearest dams of this bull average 24.60 pounds.—Adv.

E. B. Watrous' (Troy Center, Wis.)

CONSIGNMENT to the Waukesha County Holstein Sale, November 16th. Mr. Watrous is consigning a young son from his well-known junior four-year-old state record cow, Aaltje Johanna, 28.57 pounds butter in a week. He is also consigning five yearling heifers out of tested daughters of Aaltje Salo Johanna Pontiac, who carries 25 per cent of the same breeding as Segis Fayne Johanna, the only 50-pound cow. Mr. Watrous is likewise consigning a 16-pound two year old and 21-pound three year old bred to Hillvale Sir Ormsby, a proven sire whose offspring are producers. He has already a list of high-record daughters, one of them having a 24.75-pound two-year-old record that sold in last spring's sale for $2,125. A 26.37-pound bull calf out of Stardale Aaltje Posch will also be included in this consignment.—Adv.

Grunenwald, of Livingston.

L. E. GRUNENWALD, a Duroc Jersey breeder, of Livingston, Wis., has an advertisement in this issue offering spring boars for sale. They are sired by a son of the grand champion, Prince Illustrator. They are big, husky fellows and they are priced to sell. If you want a Duroc boar at a reasonable price write this breeder. His advertisement will not appear again. Please mention The Wisconsin Farmer when writing to advertisers.—Adv.

F. W. Andrews' (Mukwonago, Wis.)

CONSIGNMENT to the Waukesha County Holstein Sale, November 16th. Mr. Andrews is consigning six head, including a 20-pound cow and two well-bred heifers, bred to a 29-pound [illegible]

Field Men for The Wisconsin Farmer.

J. R. Garver, eastern half of Wisconsin. Address Room 201, Washington Bldg., Madison, Wis.

T. P. Shreve, western half Wisconsin and eastern Minnesota. Address 115 S. Main St., Janesville, Wis.

W. S. Steele, northwest Iowa, South Dakota, western Minnesota. Address Box 109, Sioux City, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

A. T. Cole, Missouri. Address 3900 Holmes St., Kansas City, Mo.

M. T. White, western Iowa and northeastern Nebraska. Address 4015 Izard St., Omaha, Neb.

breeder in Waukesha county and wishes to offer the public some of his choicest animals.—Adv.

S. A. Baird & Sons' (Waukesha, Wis.)

HIGH-CLASS consignment to the Waukesha County Holstein Sale, November 16th. S. A. Baird & Son, Waukesha, Wis., are consigning two of the greatest A. R. O. cows that have ever been offered for sale by this association. Cande De Kol Westview is recognized as being the best cow in their herd, having produced 28 pounds in seven days, 910 pounds of butter and 21,000 pounds of milk in a year. She is also the dam of an 800-pound cow and the great-grandam of a particularly promising two year old that made 12 pounds as a junior two. This heifer, by the way, is the dam of a young bull, consigned and sired by Dutchland Creamelle Sir Ascalom, a bull whose five nearest dams average 1,000 pounds of butter in a year and 27,000 pounds of milk. A half brother of the bull calf that was not any better as an individual than this calf at his age, sold at the Waukesha sale last spring for $1,250. It is evident, therefore, that this calf has great backing, having three exceptionally high-class A. R. O. dams on his dam's side as well as a world of high producers on his sire's side. The other A. R. O. cow, which S. A. Baird & Son are consigning is Myretta Korndyke De Kol, that has 24.78 pounds in seven days, 754 pounds butter, and 17,000 pounds milk in a year. She is also bred to Dutchland Creamelle Sir Ascalom. There is another point which we would call the attention of our readers to in connection with this consignment and that is animals coming from this herd have additional merit from the fact that S. A. Baird & Son are doing some of the best semi-official record work in the state and that animals coming from this herd will have an additional value by reason of this fact.—Adv.

Fred Wright, Milton Jct., Wisconsin.

ON account of the fact that Mr. Wright has recently sold his farm he has found it necessary to dispose of all of his live stock as well as feed and farm machinery, which he has on hand. We wish to call particular attention to the fact that Mr. Wright's Holstein herd is far above the average and that it really contains some of the best blood in the state, the blood of Mooie Mutual De Kol and Juliana King of Rock, which are two good sires that have done much towards making the John D. Hetts' herd and which has been prominent in many of the prize-winning animals at the dairy show for a number of years. The aged cows in this herd are due to freshen shortly after the sale, which will make them particularly attractive in view of the high prices which will be paid for milk this winter. The young stock in the herd is particularly fine, being good individuals naturally and in addition to this having had good care they present a fine picture. See advertisement for description of other live stock and machinery to be sold at this sale.—Adv.

Alfred Kirst Durocs.

ALFRED KIRST is well-known throughout Wisconsin as a swine showman of unusual ability. In 1916 he was in charge of the Atwater show herd, but he now has a farm of his own, a few real good Duroc sows and L. F. Atwater's daughter for a wife, so we expect to see a Duroc hog farm at Tomah that will produce winners in a short time. Alfred raised two excellent litters last spring and the boars from these litters are now for sale. They are sired by P. S. Wonder and Proud Chief Jr. Did you note what the boars by these sires sold for in the Atwater sale? You can buy them cheaper of Kirst. He knows these boars will please you, consequently he will send them to you on approval—no money in advance. If they suit you when you get them home send a check, if not send back the pig. No one could ask for more. Write Alfred E. Kirst, Tomah, Wis., and let him describe what he has.—Adv.

Stapleton Dispersion Sale.

ATTENTION of our readers is called to Stapleton's Ormsby-bred Holstein dispersion sale to be held at North Lake, Wis., Saturday, November 10th. Here is a tuberculosis-free herd to be placed upon the accredited list before date of sale. Joseph Stapleton has sold his farm and will dispose of his fifty head of Holsteins, including 30 registered animals and 20 high grades, 29 of milking age and most of them fresh. Our readers are asked to refer to Mr. Stapleton's illustrated advertisement on page 23 where a more complete description of some of the exceptionally good offerings in this sale may be found. For further information write Joseph Stapleton, Nashotah, Wis. We will be glad to furnish any additional facts concerning this splendid offering. Please be sure to mention The Wisconsin Farmer in your letter.

Gustave Pabst's (Dousman, Wis.)

CONSIGNMENT to the Waukesha County Holstein Sale, November 16th. Mr. Pabst is consigning a 29.97-pound bull calf sired by Admiral Walker Prilly, a 32-pound bull that formerly stood at the head of the well-known Stevenson herd, and whose dam won $131.59 worth of the association prizes, besides being the first cow to produce five records above 29 pounds. The dam of the bull calf we are consigning is Zerma Pride, who has the following records to her credit: 29.97 pounds, seven years; 27.54 pounds, five years; and 20.15 pounds, four years. The record of his three nearest dams averaged 30.22 pounds butter in seven days. It is evident, therefore, that this calf comes from a line of exceptionally high producers, as his dam and sire's dam are especially strong cows as indicated from their ability to repeat their high performance so regularly.—Adv.

Rhoda, Reed and Kruser's Consignment.

A CONSIGNMENT of exceptional interest has been made to the Inter-County Holstein sale to be held at Watertown, Wis., November 8th and 9th, by Rhoda, Reed and Kruser. These gentlemen are consigning their entire herd of 50 head, including a four-year-old 31-pound bull, a 28-pound bull calf, their senior herd sire, whose dam has a record of 25 pounds in seven days and 726 pounds of butter in a year, two daughters of the grand champion National show Holstein bull, Oak De Kol Ollie Homestead, a 28-pound cow and two of her daughters, a 25.53-pound cow and daughter and other association record cows and their offspring. Thirty head of this consignment are cows and two-year-old heifers. The advertisement of Rhoda, Reed and Kruser appears on page 24 of this issue. Write Rhoda, Reed and Kruser, Watertown, Wis., for any further information desired concerning this consignment. Please mention The Wisconsin Farmer in your correspondence.—Adv.

Carnation Stock Farm's (Oconomowoc, Wis.)

CONSIGNMENT to the Waukesha County Holstein Sale, November 16th. The Carnation Stock Farms, of Oconomowoc, are consigning some of the most popular breeding to be found in the sale, including a 26-pound son of Johanna McKinley Segis from an Ormsby-bred cow carrying 50 per cent of the blood of Sir Ormsby Hengerveld De Kol; also a son and daughter of Rag Apple Korndyke 8th from daughters of Pontiac Korndyke, as well as a grandson of Colantha Johanna Lad from a 27-pound three-and-a-half-year-old daughter of the great show bull, Ollie Johanna Sir Fayne. Six females safely in calf to Beauty Pietertje Prince, a 32-pound sire with 28 A. R. O. daughters; eight with records from 25 to 30 pounds will also be listed in their consignment.—Adv.

H. E. Reddelien's (Oconomowoc, Wis.)

CONSIGNMENT to the Waukesha County Holstein Sale, November 16th. Mr. Reddelien is consigning five choice animals with excellent individuality; all of them choice young cows with records as high as 19 pounds at three years and bred to King Ormsby, a 28-pound son of Sir Ormsby Hengerveld De Kol. Sir Ormsby Hengerveld De Kol, in our estimation, is one of the greatest sires that has been used in Wisconsin. His get are uniformly good individuals, possessing the best of udders and producing with the best of the breed. King Ormsby has a splendid list of A. R. O. daughters with a high per cent of butter fat. Mr. Reddelien is also consigning an eight-month-old son of King Ormsby, who is an excellent individual, well grown and white in color.—Adv.

More Chesters at Tomah.

WM. C. KIRST, Tomah, Wis., is another one of the Kirsts that have the Chesters. Just at this time he has spring pigs for sale, either boars or gilts and at reasonable figures. They are out of sons or daughters of noted boars, such as Schoolmaster, Crandell's Wonder and Chief Keokok. He also has some June pigs for sale that you can buy right. It will pay you to investigate the Kirst Chesters and if you want a boar or a gilt, we know Will will send you a pig worth the money. Try him.—Adv.

DOPP BROS., Ionia, Wis., are consigning a yearling son of Beauty Pietertje Prince Ormsby, out of a 23.05-pound four year old, to the Waukesha County Holstein Sale, November 16th.—Adv.

MR. C. J. WILL, of Menomonee Falls, is likewise consigning two animals from his well-known herd to the Waukesha County Holstein Sale, November 16th.—Adv.

ED. HICKS, Springfield, Wis., is consigning five evenly marked yearling daughers of Rantok Hicks to the Waukesha County Holstein Sale, November 16th.—Adv.

Administrator's Dispersion Sale

OF SHORT-HORNS, SHIRES AND SHROPSHIRES

AT THE VOLGA STOCK FARM

7 miles southwest of Elkader, 13 miles northeast of Arlington and 3 miles northeast of

Volga, Clayton Co., Ia., Wed., Nov. 14

26 **SHORT-HORNS,** consisting of two bulls, including the roan two-year-old herd bull, Conformation, a Marr Clara by White Rock, dam by Royal's Best, second dam by Imp. Royal Robin, and 24 cows and heifers that for individual merit would compare very favorably with the best in any herd. A number of the heifers are by Master Robin, a Marr Missie by Master Robin, dam by Imp. Fancy's Pride. A number of big, beefy, broad-backed cows are by Imp. Clipper Czar, a 2,450-lb. bull of the Cruickshank Clipper family. No better cattle can be found in any sale than those to be sold here.

18 SHIRES, 11 of which are registered, constitute an offering that merits the attention of the very best breeders and horsemen. Imp. Heckington Skipper, a seven-year-old roan sire, sells and the colts by him are of exceptional merit. Nine registered mares, all young, and several by the above horse, are big, heavy-boned and attractive from any point of view. They are the kind that weigh a ton in condition.

40 REGISTERED SHROPSHIRES, consisting of one imported ram, 20 ewes from one to four years old, seven ewe lambs, three yearling rams and nine ram lambs, are of excellent merit and are the right kind.

10 MAMMOTH BRONZE TURKEYS will be sold. Everything must sell, to settle the estate. E. S. Johnson, auctioneer. Write for a catalog to either

Wm. Bennington or Clara E. Bennington, Admrs.

VOLGA - IOWA

Mention The Wisconsin Farmer when writing. All trains will be met at Volga, Elkader and Arlington.

Lake Mills Holstein Sale.

(Continued from page 10.)

calf did not hit any high water mark, as it only sold for $875. The fact that he was a little dark in color may have had something to do with his not bringing any more money. Very few of the good animals of the sale went out of the state and the bidding was not stimulated very much of the time by many of the out of state buyers. Following is a list of sales:

BULLS.

Count Paul Segis Pontiac, Mar., 1916; Wm. Bratz & Son, Brandon, Wis. $310
Johanna Clothilde Champion, Mar., 1916; C. F. Wright, Mantena, Ill. 325

The above cows are mostly granddaughters of Sir Ormsby Hengerveld De Kol and are now milking from 50 to 75 lbs. a day. Snowball Ormsby Princess, 75 lbs.; Lily Ormsby Hengerveld De Kol, 55 lbs.; Calamity Dutchess Korndyke, 68 lbs.; Dora Hengerveld Dean De Kol, 65 lbs.; Dora Ormsby Hengerveld De Kol, 65 lbs.; Pet Douglass 2d, 60 lbs.; Early Dawn Ormsby Princess, 3 years, 50 lbs.

Note the firm udders of these three cows giving from 65 to 75 lbs. a day now on two milkings.

A sample of Mr. Stapleton's grade cows that is a grand type of milk cow, now giving 75 lbs. of milk a day.

Some of Mr. Stapleton's heifer calves out of granddaughters of Sir Ormsby Hengerveld and sired by Sir Magnet Fayne Homestead (165079).

STAPLETON'S ORMSBY-BRED HOLSTEIN DISPERSION SALE

NORTH LAKE, WISCONSIN SATURDAY, NOVEMBER 10, '17

THE herd is free from tuberculosis and will be placed upon the accredited list before date of sale. Having sold our farm it is necessary for us to sell our herd of 50 head of Holsteins.

There are 30 registered animals and 20 high grades. 29 are of milking age and most of them are fresh. Cows that have come in recently are giving from 50 to 75 pounds a day on two milkings. These cows are large, uniformly good individuals and mostly white in color.

There is one daughter of De Kol 2d's Paul De Kol. No. 2, 18 daughters from 1 to 5 years of Sir Ormsby Hengerveld De Kol 10th (83680) that is a half brother to the sire of the world's record cow, Dutchess Skylark Ormsby, and brother of Pietertje Maid Ormsby, another world's record cow. His daughters are large cows, weighing up to 1,000 lbs. and his dam is sired by a son of Pearl of the Dairy Joe De Kol and she has produced a 30-pound cow giving 102 pounds milk a day, besides three other A. R. O. daughters.

8 heifer calves are sired by a grandson of Fobes Tritomia Mutual De Kol, the sire of Jessie Fobes Bessie Homestead (34.95 lbs.).

This sale offers an excellent opportunity to secure cows and their daughters and granddaughters to develop for the advanced registry.

Will also sell three young teams of grade Percheron horses weighing from 3,000 to 3,200 pounds.

J. R. Love and R. S. Benjamin, auctioneers. Our farm is a mile out from North Lake.

JOSEPH STAPLETON, Prop.
NASHOTAH (POST OFFICE ADDRESS) WIS.

Rhoda, Reed & Kruser's

Pabst Maplecrest King (151413). Senior herd sire of the Rhoda, Reed & Kruser herd, to be sold at the Inter-County Holstein Sale. His dam has 25 lbs. 7 days, 726 lbs. butter and nearly 14,000 lbs. milk in a year.

Oak De Kol Korndyke (294037). 17-lb. junior two year old by Oak De Kol Ollie Homestead. Consigned by Rhoda, Reed & Kruser, Watertown, Wisconsin.

Consignment to the

Inter-County Holstein Sale

Nov. 8th-9th

Watertown, Wisconsin

WE are consigning our entire herd of fifty head to the Inter-County Holstein Sale, including a four-year-old, 31-lb. bull, a 28-lb. bull calf, one senior herd sire whose dam has 25 lbs. 7 days, 726 lbs. butter in a year; two daughters of the National Show bull, Oak De Kol Ollie Homestead; a 28-lb. cow and her two daughters; a 25.53-lb. cow and daughter, and a number of other A. R. O. cows and their offspring. Thirty head of our herd are cows and two-year-old heifers.

Wright's

Dispersion Sale

Milton Junction, Wis., Nov. 7th

FROM the fact that we have sold our farm, it makes it necessary for us to dispose of our Holstein herd, as well as other live stock and implements used in operating a 160-acre farm. Our Holstein herd consists of about 50 head, most of which are pure breds, containing the most popular blood of the breed. We have ten daughters of Mooie Mutual De Kol; one daughter of Sir Pontiac Korndyke, out of a daughter of Pontiac Korndyke, and ten daughters of Juliana King of Rock that has stood at the head of John Hetts' noted Holstein herd for several years, and whose get is well known by Holstein breeders throughout the state. Our present herd sire is Beauty Vale of Rock, that is out of Fanny Vale Mercedes, that has a record of 20 pounds in seven days and 722 pounds of butter in a year, made at three years and sixteen days of age. She has two A. R. O. daughters and is known as the best daughter of Fanny L. De Kol, a cow that has nine A. R. O. daughters, which is a world's record. Most of our cows are due to freshen shortly after the sale and will be in condition to produce a profitable flow during the winter. We are also selling five Percheron females, including one mare five years old, bred and foaled at the University of Wisconsin; two four-year-old mares, one two year old and one foal. We are also selling 30 acres of shocked corn, 300 bushels oats, hay that is left, Calfway milking machine, 11 brood sows and 71 pigs.

HILLSIDE HOLSTEINS

WE HAVE TEN REGISTERED COWS for sale and one heifer. All cows have A. R. O. records but one; some due to freshen soon. Prices, $150 to $300. Extra large cows, good dairy type.

KIRKPATRICK BROS. - - - - - - - **Reedsburg, Wis.**

We Do Not Claim the World's Record, But We Do Claim a World of Records

16,800 LBS. MILK AND 711 LBS. BUTTER represents the average semi-official yearly record for the many tests we have run, including two year olds as well as the other junior classes, up to mature cows. **Fannie L. De Kol,** one of our foundation cows, with **11 A. R. O.** daughters, represents the high-producing qualities of our herd. Bull calves for sale at all times. Write or come and look them over for yourself.

JOHN D. HETTS :: :: :: **Fort Atkinson, Wis.**

Pabst Korndyke Champion
Son of Korndyke Segis Johanna,
Has just been sold to the North Dakota Agricultural College.

FRED CHANDLER, R. 7, Chariton, Ia.

Winchester Model 12.
Hammerless Shotgun.

Why more duck hunters choose this model than any other

If there's ever a place where you need a gun that's a hundred per cent reliable, it's when you're down in the damp salt marshes after duck.

Whatever gun you may start with, if you keep on long enough, you will come around to the Winchester No. 12 Repeater. It is the favorite in the long run with old duck shooters.

In the damp salt air of the seashore and swamps this gun never "gums." Under the most severe conditions it is a sure-fire, sure-to-work Repeater. It will not jam, catch, or fail to extract the empty shell. It "feels" right, "comes up" right, and *is* right. It works smoothly in whatever position it is held.

At the distance at which you get most chances at ducks, this gun shoots an effective uniform pattern of great game-getting penetration.

The pattern that brings down the game

The remarkable game-getting pattern of the Winchester Model 12 (or the Model 97 for those who prefer a hammer gun) shooting its own standard ammunition, is the result of infinite care taken in boring the barrel.

The right amount of choke for different loads has been worked out after exhaustive experiment. Result: a pattern that spreads out evenly — neither too scattered nor too bunched—and lands with lots of steam behind it.

Quick feeder, sure ejector. Throws empty shell to the side, out of your way.

Even spread, maximum penetration, Winchester shot pattern brings down the game.

The barrel *is* the gun

Men who know guns realize that the accuracy and durability of a gun lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard of quality of the barrel on the highest and lowest priced Winchester guns. With Winchester the barrel *is* the gun and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel.

The Winchester barrel

The barrel of the Winchester Model 12 has been bored to micrometer measurements for the pattern it is meant to make. The degree of choke exactly offsets the tendency of the shot to spread. Until its pattern proves up to Winchester standard, the gun cannot leave the factory. The Nickel Steel construction preserves the original accuracy forever. The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that, with proper care, will last a lifetime.

For those who prefer a hammer action shotgun, we have made the Model 97. It is built on similar lines to the Model 12, but with hammer action.

What (P W) means

This mark on the barrel means *Viewed and Proved Winchester.* This stamp stands for Winchester's guarantee of quality, with fifty years of the best gun-making reputation behind it.

Every gun that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times for smooth action and accuracy, and has been fired with excess loads for strength.

At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment process.*

It is this care in manufacturing that has produced in the Model 12 and Model 97 guns of unsurpassed game-getting qualities that have won the name of "The Perfect Repeaters" among duck hunters.

Write for details of Winchester shotguns, rifles and ammunition

The Winchester catalog is an encyclopedia on shotguns, rifles and ammunition. Every hunter should have one. It gives detailed specifications of the Model 12 and Model 97, and describes at length the principles on which every one of the world famous Winchester shotguns and rifles is built. Write today. We will mail you a copy free, postpaid.

VOL. XLVI. NO. 45. THURSDAY, NOVEMBER 8, 1917. WHOLE NO. 1867

Wisconsin Needs Millions of Sheep.

National Wool Growers Co-operating With Wisconsin and Michigan Organizations Hope to Increase Live Stock on Millions of Wisconsin Acres.

A DETERMINED effort is being made to increase the production of sheep in Wisconsin and especially in that large area representing many millions of acres north of the line drawn east and west through the center of the state. In a general way this area is spoken of as upper Wisconsin, but the territory in which sheep raising may be profitable embraces even more than the so-called cutover lands. The first stimulus to greater sheep and wool production in Wisconsin came as a result of a conference held in Chicago in September when representatives of all of the lake states discussed the possibilities of sheep raising. This was followed by another conference, October 10th, at Menominee, Mich., which is directly across the river from Marinette, Wis. The third step in the campaign is to be taken at a meeting to be held at the Hotel Pfister, Milwaukee, Wis., Thursday, November 22d, and at this meeting there will be representatives from many upper and central Wisconsin counties and also from counties in the upper peninsula of Michigan.

In speaking of the possibilities of sheep raising in upper Wisconsin and upper Michigan, Mr. F. J. Hagenbarth, of Salt Lake City, president of the National Wool Growers' Association, after a week's inspection trip in this territory, stated at the Menominee meeting that Wisconsin and upper Michigan still have undeveloped some of the greatest sheep and live stock lands in the world. It is a well-known fact that the best stock and the best wool are grown in the colder countries. Sheep and cattle deteriorate in the warmer countries and this explains why Texas and other southern states send beef north to be invigorated and fattened.

Mr. Hagenbarth says that it is a mistake to think that the sixteen million acres of land in upper Wisconsin and Michigan, suitable for grazing, can never really become much of a corn country and he further believes that wheat is an uncertain crop. But when it comes to live stock these grazing lands offer no uncertainty and if the settler or farmer will put on an average of one and one-half sheep to an acre on half of the available land, with cattle in the low-lying tamarack swamps, this territory can easily take care of eight million sheep and upwards of a million head of cattle. This would create an asset in this territory of $150,000,000, on lands which today are not producing anything to speak of. What a wonderful opportunity to assist our government in these times of food shortage and what a tremendous opportunity for the undeveloped territory to not only add to its valuation, but also to add something like $100,000,000 annually to its gross earnings.

The question which naturally arises in the minds of those who are debating the question of putting sheep or other live stock on upper Wisconsin lands is whether or not the present demands are abnormal and whether profits would be reasonably assured following the stress of war times. This question is ably answered by Mr. Hagenbarth, who points to the fact that live stock is the salvation of agricultural countries. It has built up the British Isles and made Germany powerful. When live stock passes away from a country farm production passes also. According to Mr. Hagenbarth, sheep are much better than cattle as an investment. The returns from sheep, he says, are two to one on cattle on an area suitable for both. Sheep are more easily handled and furnish two crops, namely, wool and mutton. In America, today, there is a shortage of from 60 to 70 per cent of the wool needed for home consumption, to say nothing of what we could sell abroad if we had it. Under normal conditions the United States consumes 600,000,000 pounds of wool, and at the present we are producing a little less than one-half that amount. A great portion of the shortage could be produced in upper Wisconsin and Michigan.

SHEEP WILL THRIVE BETTER THAN ANY OTHER LIVE STOCK ON LAND OF THIS CHARACTER.

Following his tour of inspection and investigation of the availability of upper Wisconsin for live stock, Mr. Hagenbarth announced that our proposition is one of simple arithmetic. We know the rain shortage which exists in the West today. We know that stock must be taken to some new and suitable lands. It is well known that there is a surplus of breeding ewes available. Many old ewes, unable to cope with the outdoor rigors of winter in the West, can be had for Wisconsin farmers where they can be housed and fed during the winter where they will enjoy several years of usefulness. To try and develop a corn belt would be a mistake. Why not seize the absolute knowledge you have that Nature intended this to be the greatest sheep and cattle country in the world? Get right up close to the United States Department of Agriculture after you have formed yourselves into a harmonious organization here at home. According to Mr. Hagenbarth, the Department of Agriculture should be called upon to at once aid in placing ten million sheep in Wisconsin and Michigan. This will require raising $50,000 to $60,000 each year for five years. But the wool manufacturers of the country are interested, the packers of the country are interested, the lumber and land companies will help and so will the railroads. Strictly business principles should be adopted and it is Mr. Hagenbarth's advice that upper Wisconsin and upper Michigan go into this business on a large scale.

In suggesting the carrying out of these plans, Mr. Hagenbarth believes it would be wise to form development committees to make contracts with the present growers of sheep. Two or three men, competent to judge, should be sent into the West with power to buy. Some arrangement could be effected whereby the breeders could be offered free use of Wisconsin and Michigan land for three years, charged only taxes for the next two years and after that have an arrangement to begin paying the principal and interest. Such an offer should be an inducement to newcomers and would help to finance the settler who has little funds to put into land. Some arrangements must be made so that the settler can have money for development work. Mr. Hagenbarth suggests the organization of live stock loan companies to advance money for the purchase of sheep and cattle and take a chattel mortgage for protection. There are thousands of men in the West, sons of western cattlemen and sheep men, who will be glad to go into Wisconsin and take advantage of the right kind of opportunities. It will take the newcomers two or three years to arrange to take care of their sheep with hay from their own farms and some plan will have to be worked out to guarantee a settler a sufficient supply of winter hay at a fair price. It is not the idea of those connected

with this plan to enlarge the sheep industry that the work should be turned over to inexperienced settlers. On the contrary, they hope to interest men of wide experience and experiment station workers who have given the subject of sheep raising plenty of thought and attention. In connection with the campaign now in progress The Wisconsin Farmer has the privilege to publish some information on this subject furnished by F. J. Hogoboom, manager of the O. B. Parhan & Company sheep ranch at Westboro, Wisconsin, which throws some light on the cost of going into the sheep business:

A good two year old ewe will pay 20 per cent interest on $50 and I am selling them for $15. Our sheep sheared $5 worth of wool this year and they have lambs at side that are worth from $10 to $12 each and I have some that weigh $15 worth and they are running on $20 land and when it gets all grazed over well it will carry four ewes and their lambs to the acre and at that rate $20 land will pay $40 per acre per annum, and as to land clearing there is nothing that can beat them.

We have been here three years and we have about 800 acres cut off and the sheep have kept it sprouted so perfectly that the roots are entirely dead and anyone can come and see for themselves and need not take my word for it. I figure that 500 sheep are equal to a $40 man and keep the man mowing brush all summer and when the sheep get through the brush is killed and the man can commence the next summer where he commenced the summer before. In this manner a man can handle northern Wisconsin land and make money besides clearing his land. We have made money every summer here on this Westboro ranch and I suppose we have as rough a ranch as you will find anywhere in the state. I don't know of much more of importance and they need not take anybody's word for this; they can come and I will show them.

G. M. Mashek, residing about sixty miles from Marinette, Wisconsin, claims that new cut-over lands will support two or three ewes and their lambs per acre and that after it has been pastured for several years it will carry five or six of their lambs per acre. He places the cost of winter feed in the average Upper Wisconsin country at from $2 to $2.50 and says that lambs turned off clover pastures from cut-over lands will sell at the Chicago stockyards as grain-fed lambs. Mr. Mashek advises starting with western ewes and says that sheep will develop into better quality in the second and third year. In fact, sheep in the Great Lakes countries are always better two or three years after the original flock is brought from the West. Mr. Mashek had trouble with stomach worms in his herd of sheep imported to Wisconsin, but he says that the best proof he can have that the cut-over lands are free from this disease is that about six months later the disease had entirely disappeared. The impression that the old timber lands of Wisconsin are exceedingly cold in winter is erroneous. Those who have experimented with sheep both in Wisconsin and the western range country find that the losses are much less in Wisconsin. The sheep make their best gains after the first frost and until there is two or three inches of snow on the ground. Furthermore, this snow preserves the pasture and makes early feed in the spring. Before engaging in farming in Wisconsin Mr. Mashek worked out a set of figures indicating what the food production on various lines should be and he says his hopes and profits came nearer being realized in the sheep business than any other form of farming he attempted.

In and Around Wisconsin

Mr. J. J. Garland, formerly emergency food agent of Calumet county, has been appointed assistant emergency administration leader for the northern part of Wisconsin and will make his home for the present at Antigo.

Inspectors of the plumbing division, Wisconsin State Board of Health, report that farmers are greatly interested in sewage disposal plants. In three months the department responded to requests from 204 farmers for blueprints for sewage disposal plants.

Three Wisconsin men won prizes in the Bradley Knitting Company Sheep Club work, organized by this well-known concern located at Delavan, Wisconsin. C. Merrill, Hilbert, Wisconsin, was one of the grand prize winners. Ralph E. Crosby, of Belmont, and Thilo Boesch, of Mauston, Wisconsin, were also prize winners.

The Mike Reik farm, three and a half miles north of Hartford, Wisconsin, recently sold for $200 an acre, the total consideration being $28,000. This 140-acre farm is tillable except fifteen acres of heavy timber. There is a dairy barn 35x111 feet, one of the largest in the county. The farm was purchased by Rudolph Troller, who had been a tenant up to this year.

Mr. Herbert Hoover, national food administrator, has sent to prominent persons in districts where sugar beets are raised the following letter:

One of the most vital problems confronting this nation is that of procuring sufficient sugar to meet the requirements of our people and of the allied nations fighting our common battle. The production of cane sugar in this hemisphere can and will be increased to a limited degree. But we must rely upon the farmers in sugar beet producing sections of the country for a part of the needed supply. I, therefore, earnestly appeal to every farmer, so situated, to come to his country's aid in this hour of need. Without the coöperation of the American beet grower our task will be very difficult and our ability to respond to the calls to be made upon us for this very essential commodity will be curtailed. It is at least the duty of every beet grower to maintain in 1918 his normal acreage of sugar beets. It is his privilege to increase that acreage to the extent that a well-balanced production of crops will permit, and in this manner effectively demonstrate his patriotism.

It is estimated that Wisconsin increased its sugar beet production this year from 25,000 tons to 30,000 tons and those who engaged in the raising of beets made good profits.

The Green Lake Junior Poultry and Garden Club show was held at Green Lake, Friday, October 14th, in the high school building, under the direction of H. G. Brown, principal. T. L. Bewick, of Madison, was the chief speaker. There was a good display of birds and a fine garden display.

The Thirteenth Annual Poultry Show will be held at Oconomowoc, Wisconsin, December 12th to 16th. The judges will be W. E. Stanfield, Hillsdale, Michigan; D. E. Hale, Chicago; Harlo J. Fiske, Oconomowoc, and Clyde Terrill, of Oshkosh. The tenth annual poultry show will be held at Watertown, December 4th to 9th. Geo. W. Hackett, of North Freedom, Wisconsin, will be judge. Arrangements have been made to ship the birds direct from the show at Watertown to Oconomowoc.

The Racine and Kenosha county convention of the American Society of Equity was recnty held at Union Grove and support was pledged to the milk producers' association in defending their rights in court. Committees were selected for the purpose of forwarding farm products direct to the consumer at Milwaukee, these committees being selected by Mayor Hoam to sell the products to the consumers. Under the arrangement which is being worked out the consumer will pay no middlemen's charges and the only cost added to the farmers' charges will be freight and cartage.

The report which comes to us from Waukesha county does not look very much like the farmer is a slacker in buying liberty bonds. At pleasant Valley Farms and Spring Brook creameries in the town of Genesee $13,150 was subscribed to the second liberty loan and two-thirds of it paid in cash. These farmers subscribed $1,100 to the recent Red Cross campaign. The subscriptions run from $50 to $5,000, the largest subscription being made by Robert G. Morey, manager of the farms. A committee in Sheboygan county sold bonds in one day to ninety-eight farmers aggregating $10,350. This does not represent the amount taken by the farmers in the neighborhoods passed through, as many of them had already subscribed through local banks.

Our readers should not take chances on marketing stale eggs. A farmer in Portage county the other day disposed of a supply of eggs and was just in the act of accepting his money when a stranger, who had been an interested spectator, walked up and said that he intended to examine the eggs. It was discovered that this stranger was Geo. H. Eigenberger, inspector for the state food and dairy department. He examined a number of the eggs with a candle device and found 3½ per cent of them rotten. The farmer thereupon was escorted to the county judge who assessed against him $28.71 in fines and cost.

The fifteenth annual report of the Wisconsin Agricultural Experiment Association and the fifth annual report of the Alfalfa Order have been issued, compiled by R. A. Moore, secretary, and are ready for distribution to the members. This report contains addresses at the meeting at Madison last winter and reports of the experiment station work for the year 1916. Also gives a list of members of the experiment association and premium winners at the 1917 pure-bred grain show held at Madison in February.

GOOD MEN WANTED TO LEARN THE AUTO BUSINESS

Any ambitious, capable young man can make a success for himself, and if you will only prepare yourself, you will get work, because positions are open, waiting for competent men to do Auto and Electrical work.

The American Auto College develops your talent for a splendid, big paying trade. Our course has been enlarged with lots of new work—principles of Knight Motors, 8 and 12-cylinder Engines of new models, Tractors, new Starting Systems, Magnetos, Wiring, Coils, Welding, Brazing, Lathe work, Milling and Drill work, Tool making, Overhauling and Repairing, and all the newest, up-to-date Auto equipment.

AUTO College

$900 TO $3,000 SALARY OR BUSINESS PROFITS PER YEAR

Positions Are Open
Tinker repair men are let out as fast as good men are found to take their places. Garage men, letters and telegrams come to us asking for good men. Just prepare yourself and your future and success will be started. Think of the good time, and the money you can make.

LIFETIME OPPORTUNITY—It's up to you to be either a common, hard-working laborer or else learn a good business. Thousands of men will go into the Auto business within the next year. Be one of them. We want you to. Get started right away. Learn here where the opportunities are greatest and best, by our system of actual work in our large shops. No books used; we furnish tools. You do the work yourself. Our men learn easily and quickly because practical work is the best.

Big Electric Starter and Tractor course FREE with the regular Auto course. Write for our big FREE Catalog now.

AMERICAN AUTO COLLEGE, 406 Auto Bldg., OMAHA, NEBRASKA

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 24th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. A dollar bill mailed at our risk will bring you the Pathfinder for a full year, or simply send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. This does not repay us but we are glad to invest in new friends. Pathfinder, Bx 70, Washington, D.C.

The Wisconsin Farmer

THURSDAY, NOVEMBER 8, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

LONGING FOR THE OLD WISCONSIN FARM.

I AM always glad to be all the help I can to readers of The Wisconsin Farmer. I consider that to be one of the duties and prerogatives of a publisher. If I have or can gain access to any information which will make my readers better farmers or which will advance Wisconsin agriculture to a still higher plane, I can assure you that I am yours to command. So far as lies in my power, no letter of inquiry will go unanswered.

With this brief introduction I want to present to you, this week, a letter which shows not only the manner in which I am called upon to render assistance, but the extent to which the minds of men in other callings and professions turn to farming, the eagerness of other workers to drop the tools of their craft in town or city and take up the plow and the fork out in the open country. Possibly there may be some here in "the family circle" who dream of the time when they can quit the farm for the city, leave farming for some other occupation. Let me show them how one reader of The Wisconsin Farmer longs for the good old days to return, when he was a farmer, and how he is taking advantage of every possible agency to get him back from the schoolroom to the great outdoor school of agriculture. This letter comes to me from a teacher:

Office of the Stephen Public Schools, C. L. Yule, director of agriculture, Stephen, Minn., October 22, 1917. Mr. James M. Pierce, publisher Wisconsin Farmer, Madison, Wis. Dear Mr. Pierce: You may wonder why I am writing you, a Wisconsin editor, from a far northern Minnesota town, but briefly, I am a Wisconsin man, born and raised on a west central Wisconsin farm and a graduate of the University of Wisconsin long course in agriculture. Teaching since 1914 has led me to this state. Now I wish to leave the teaching field and go back to farming. I would like some personal advice as to the borrowing of money through the federal farm land banks or elsewhere.

To state the case briefly: The land, sixty acres, which I wish to buy is located in Eau Claire county, is the best of clay loam, on good roads and with good markets and other features as to surroundings. All the outbuildings are usable, but the house is not much to mention. The land is worth about $100 an acre. Now, like many other men on a salary, I have been able to save little in town, with a small family. I expect to have cash to buy a team and the machinery, with possibly some stock, but not enough to pay for the land and houses. How much money could I borrow on the sixty acres, of $6,000 value? Could any additional money be secured for the purpose of erecting a house; that is, could the house be used as security? I am thinking especially of the long term whereby the interest and principal can be paid off together.

You may question the advisability of this course, but to be frank, I see no future in teaching. I admit also a desire to own something and gradually to build up a home. I do not fear the attempt, as to being able to apply myself, as I have been mostly on a farm; rented and worked this farm I want to buy four years previous to my university work, and in fact I went to the university to learn more about farming, live stock especially. What do you advise? C. L. YULE.

I wrote Mr. Yule a long letter, advising him to give up teaching and to return to farming, if that is where his heart leads him, for he has had the necessary experience and he will never be tempted away from the land again. I told him we would all welcome him back to Wisconsin; that The Wisconsin Farmer would do anything and everything it could to help him succeed. Then I told him about the workings of the federal farm loan law; how he must join with at least nine other farmers to form a borrowing association and must subscribe for 5 per cent of the amount of the loan he wished to make; how he could obtain as much as 50 per cent of the appraised valuation of the land ($3,000 in his case, probably) plus 20 per cent of the appraised valuation of the permanent, insured improvements thereon; and so on and on. All this took some time, but I was only too glad to render the service. We need men like Mr. Yule here in our state; men who have come to realize that farming is the most useful, honorable and satisfying of all professions; men who will stick to it, because they have learned that nothing else will give equal returns, in dollars and cents, and the satisfaction of doing good and necessary work.

I hope to be able to report, some time in the near future, that Mr. Yule has arranged the necessary loan, that he is again "one of us," back home in the Badger state. We have advanced a long way here in Wisconsin, but there still remains much to do. Production must be increased, farming conditions must be made still higher. It is men with brains and experience, such as this one, who will make our great state still greater.

ARMY CAMPS IN THE GRAIN BELT.

A SUBSCRIBER writes to ask me how many national army camps there are now in the grain belt, and where they are located. I take great pleasure in giving the information. Altogether, we have five such camps here in the Middle West, a large proportion of the soldiers there quartered being farm boys. Their location, names, and the states from which their troops come are as follows:

Camp Custer, Battle Creek, Mich.; soldiers from Michigan and part of Wisconsin.
Camp Dodge, Des Moines, Iowa; soldiers from Minnesota, Iowa, North Dakota and part of Illinois.
Camp Grant, Rockford, Ill.; soldiers from part of Wisconsin and part of Illinois.
Camp Funston, Fort Riley, Kan.; soldiers from Kansas, Missouri, Nebraska and South Dakota.
Camp Pike, Little Rock, Ark.; soldiers from Arkansas, as well as Louisiana, Mississippi and part of Alabama.

In addition to these five national army cantonments actually in the grain belt, companies of grain-belt soldiers have been sent to similar camps elsewhere. Thus, for instance, some of the Illinois troops are quartered at Camp Taylor, Louisville, as well as at Camp Grant and Camp Dodge; and the Oklahoma troops are quartered at Camp Travis, San Antonio, Texas.

All of the state guards have been sent from the grain belt to the South by this time, so that they can carry on intensive military training throughout the entire winter, without cessation because of blizzards or cold weather. I am printing the location of the troops in the national guard from the grain belt, for the convenience of my readers. These camps are altogether different from the ones in which the national, or conscript, army is located, as I named them above. The national guard troops from the grain-belt states are now quartered as follows:

Wisconsin guards at Camp McArthur, Waco, Texas.
Iowa guards at Camp Cody, Deming, N. M.
Illinois guards at Camp Logan, Houston, Texas.
Minnesota guards at Camp Cody, Deming, N. M.
Missouri guards at Camp Doniphan, Fort Sill, Okla.
Nebraska guards at Camp Cody, Deming, N. M.
South Dakota guards at Camp Cody, Deming, N. M., and Camp Greene, Charlotte, N. C.
North Dakota guards at Camp Greene, Charlotte, N. C.
Oklahoma guards at Camp Bowie, Fort Worth, Texas.
Kansas guards at Camp Doniphan, Fort Sill, Okla.
Arkansas guards at Camp Beauregard, Alexandria, La.

The grain belt has supplied its quota to all branches of Uncle Sam's fighting forces in magnificent manner. Over near Chicago, at the Great Lakes training station, are many farm boys learning to be sailors and marines. It is really surprising to me the manner in which our inland and fresh-water boys turn to the salt seas for their service. The navy is very popular in this part of the country.

We have done much in the last few months to disprove the charge that the Middle West is not awake to the seriousness or the need of the moment. The boys have gone from our farms literally by the thousands. Some of them are in our grain-belt camps yet; others in the South; others at camps on Long Island; others already in the trenches of northern France. But wherever they are, one thing is sure: They are our boys still, they are fighting the good fight, and we have splendid reason to be proud of them. Many a farm boy will be a hero, whose name will live long in history, before this awful war is at an end. Let us pray for their safe return and that the God of Battles will look after them as they go from our peaceful farms to fight for Uncle Sam and world-wide democracy.

SAVING FOOD IN WAR TIMES.

I AM in receipt of a splendid letter from Mr. H. C. McLean, R. F. D. 4, Marshalltown, Iowa, which not only presents a timely subject, but takes me back to my boyhood days and causes a host of memories to arise in my mind. Mr. McLean informs me that his education was obtained in a log schoolhouse, in Michigan, "in the fifties." My own was obtained in a log schoolhouse (the old Oak Grove school) in Ohio about the same time, so that I know exactly under what conditions he struggled. He writes a wonderfully good and clear hand and has the faculty of expressing himself plainly and pointedly. Perhaps, after all, the old log house education was as good—so far as it went—as any to be obtained nowadays in the most modern consolidated school. But that was not what I started out to say. I guess I can do no better than to introduce the subject by quoting a portion of Mr. McLean's letter to me, as follows:

Dear Mr. Pierce: What I want to write about is this, for the benefit of farmers and others: I have a small gas engine and small mill that does its own sifting, and I have been grinding my own wheat and what we call whole wheat flour, only the coarse bran is sifted out so we get what we call brown flour, and make bread, biscuit, breakfast food or mush and good pancakes. We have been living on this for nine years. I sell some flour to others, some in town. I live on my farm and we all have much better health than when we lived on fine flour with its adulterations, as there is but little else left in it but starch, and that is too much like paste and is said to be the predominating cause of so many operations and other diseases. I can make forty-two pounds of brown flour from sixty pounds of wheat. I think that is about ten pounds more than is made in fine flour, so there is a saving in wheat as the government wants to do. I can make a good quality of corn meal, also oat meal or flour, also barley and rye and buckwheat flour. If we would use more of these it would be another saving of wheat, as the government wants, and we would have better health. In civil war time mother had me browning barley for coffee and grinding it in the old mill between my knees because of high prices. I do it now in my power mill. It is an iron mill. Browned barley is a good substitute for coffee alone or mixed with coffee. I can grind chop feed or chicken feed. Nearly all the farmers in the corn belt have gas engines and can do as I do, and their health would be much better.

Nothing could be more timely than what Mr. McLean suggests. It is every bit as important to save foodstuff as it is to raise it. If we squander that which we have, even in abundance, we shall come to want in due time. The growing season on our grain farms is at an end; but the saving season has just begun. If we can obtain good, wholesome, nourishing, satisfying substitutes for our former articles of diet, and so increase the quantities of foodstuff to send abroad to our allies and to feed our own soldiers, we shall be doing our bit to "save the world for democracy" and to bring the war to an early conclusion. I have felt for a long time that the war may have at least one good result, regardless of how and when it terminates; it will end a great many of our useless and unjustified extravagances. We have become pampered by prosperity, spoiled by a sufficiency which has made us crave luxuries which we would be better without. I am sure that there are many articles of diet of the days gone by which would be better for all of us than some of the highly-seasoned, indigestible dishes which adorn our tables today. Mr. McLean has shown us how it is possible for us to save money and wheat and, incidentally, indigestion and doctor's bills.

His letter made me think very strongly of my own boyhood days, back in Ohio. During the civil war my mother gave us children (dependent upon her after my father met an untimely death fighting for the stars and stripes in the southland) foods at once palatable and appetizing, at which many of the younger generation of today would scoff, were not necessity to bring them to our tables again. I can recall, vividly and not unpleasantly, the "war bread" which we ate in those days, made of wheat (ground at the near-by mill) of corn meal and of potatoes. I am glad, indeed, that the government officials have found it worth while to publish many recipes telling how to make "potato bread." I have printed several of these in the Home Department of this paper within the last few weeks. If my readers did not see or save them, I will be only too glad to send them copies. But we need not stop with this. Mr. McLean tells of browning barley for a coffee substitute. My sainted mother browned rye for a coffee substitute, and a really palatable drink it made, too. Many a man or woman with a "coffee heart" could use these substitutes to their advantage, whether we have war or peace.

Let us help win the war by saving food, as well as producing it. Let us build ourselves up to the top notch of physical vigor by dispensing with the foods which are not good for us and using those which are nourishing and conducive to bodily and mental strength. We can learn many lessons from the war, even in the peace and quietness of the farm home. This one of saving food is far from the least of them.

LEND A HAND.

I DO not want to preach, I just want to talk a few minutes, on no particular text and with no certain end in view, but simply to tell you of a couple of incidents which have come under my

(Concluded on page 5.)

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES.

BY JAMES M. PIERCE

JAMES ATKINSON, EDITOR-IN-CHIEF

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter.

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address THE WISCONSIN FARMER, Madison, Wisconsin

November and December Milk Prices.

Directors of the Milk Producers' Association for the Chicago district, who met at the Morrison Hotel in Chicago last Saturday, agreed to accept $3.22 for 100 pounds of milk during November and December. This is a reduction of 20 cents per hundred pounds from the October schedule. The new price is a compromise and a part of the agreement is that the dealers will furnish milk in the city of Chicago at 12 cents per quart until January 1st. Both sides made considerable concession. The milk producers were asking $3.71 as a minimum price for November.

Out of the fifty-nine directors who were present at the meeting, representing milk producers' associations, only four refused to stand and by so doing vote for the $3.22 price. One of these said that a thousand cows have been sold during the last week in his district and that the new low price means that many more will be sold.

The price agreed upon is lower than was expected. The Wisconsin commission, appointed by Governor Philipp, had, we are advised, agreed upon a somewhat higher price, but were holding their decision awaiting the outcome of the conference at Chicago last Saturday.

There seems now to be no doubt that the $3.22 per hundredweight price will stick for November and December. At least the farmer milk producers seem inclined to give it a fair trial. No one claims that this is the true price at which milk should sell under present production costs with a fair margin of profit added for the producer. Following the conference at Chicago Mr. Harry A. Wheeler, representing the federal food administration for Illinois, said that it must be understood that farmers have, by accepting the $3.22 price, made a contribution out of their receipts. He further said that if it can be shown that they lose money by this price, they will be reimbursed. Just what this means we are unable to say at this time.

Of course, the $3.42 price for October was based on old prices for corn and new corn will not be worth what old corn is worth.

Our advice to our readers in southern Wisconsin and northern Illinois is to accept the $3.22 price with good grace. Every milk producer should have his cost system in such shape that he will be able to show at the end of the month whether he lost money and how much. The government is not going to force farmers to produce milk at a loss and by giving the $3.22 price a fair trial for two months it will be possible to establish good and sufficient evidence whether or not the government was right in forcing the price upon us.

Milk has such a great value as food, and there is such a great demand for it that we feel confident the prices will eventually be adjusted so that the dairyman will make reasonable profits. Do not be discouraged by the new price and above all things do not rush dairy cattle to the block.

Another important event of the past week affecting dairy districts was the abolition of the Elgin butter market, which has fixed butter prices, just as the board of trade has fixed corn, wheat and oats prices, and the packers have fixed meat prices. The Elgin board will not operate until after the war, and it seems very probable at this time that the board may never be reopened. The request of Herbert C. Hoover, food administrator, that the Elgin board close, was complied with promptly. Other butter boards, which, however, do not have much influence on the market, and the cheese boards are still operating.

Wisconsin Farmers Not "Hoarding" Potatoes.

E. F. Kileen, chairman of the Waushara Council of Defense, resents a recent statement by one of the pig packers that Wisconsin farmers were hoarding their potatoes. This statement was made in the Milwaukee Sentinel in an interview published October 20th. Mr. Kileen calls attention to the fact that at that time farmers had not even harvested their potatoes, but were just beginning to work day and night to try to get the crop out of the ground. In Waushara county women and children were working in the fields as well as the men. Waushara county sent about 200 of her men, who usually dig potatoes, to the front to help dig trenches. There seems to be an idea among some people that the potato farmer should harvest his crop and rush it immediately to the closest market and get what he can for it. Alas, this idea does not prevail among those who are handling sugar and coal. It has come to our attention that just a few days ago tons upon tons of sugar were found in a Buffalo, New York, warehouse and the packages were labeled, "Top Crust Flour." To further carry out the deception those who had the misleading labels placed on the packages sprinkled a little fine flour on the outside. The farmers will market their potatoes in due time and there needn't be any fear about the crops being hoarded on the farms. As a matter of fact, few farmers have any provision for hoarding any considerable amount of potatoes. Those which are now being held by farmers are in the main being placed in temporary pits in the fields. Experience of years has shown that potatoes are sold from the time they are first ready for market until about the first of April. Speculators have always tried to get hold of as large a percentage of the crop as possible in the fall. People in the cities who will need potatoes in the winter and spring may rest assured that their food supply will be freer from graft if it is stored for a time on farms instead of kept in warehouses by speculators.

Naming a New Wisconsin Senator.

Gov. Emanuel L. Philipp on October 31st issued a statement on the Wisconsin senatorial situation in part as follows:

Insomuch as the term of service of the new senator, in any event, will be less than a year, the people may save the cost in money and avoid the turmoil and bitterness that would be injected into an election at this time if the legislature will authorize the governor to fill this temporary place by appointment.

I propose to call a special session of the legislature in the near future for such legislation as is necessary to meet the war emergencies, and I shall include a recommendation in the call asking for authority to fill the vacancy that exists now in the office of United States senator by appointment.

In order to forestall the argument that will be made that I have some political advantage in mind, either for myself or some friend, I will say that if it is my privilege to make an appointment I shall select the strongest man in the state whom I can induce to take the office. He will be a man who will stand with the national government in our present crisis and not a rank partisan politician.

Personal friends have expressed the wish and political enemies have expressed the fear, that I might be a candidate in case an election were held, or, as has been suggested by a few nervous politicians, that I might by legerdemain place myself in the office if the place is filled by appointment. In reply to all such statements I wish to say that I am not a candidate for the office of United States senator and do not wish the position for myself. The people elected me governor of this state and I propose to serve out the term for which they elected me. Furthermore, it is my judgment that I may render the people a service during the balance of my term that they need, and the privilege of which I do not wish to forego.

The federal constitution provides that vacancies in the United States senatorship from any state shall be filled by election or that the legislature of that state may have the authority to temporarily fill the appointment. Our Wisconsin legislature has never as yet delegated this authority to the governor. Governor Philipp asks that in the case of the present senatorial vacancy in Wisconsin he be permitted to fill the vacancy, which means that the man who is selected would be [illegible]r United States senator until the time the appointee or some other man would be elected by the people in November, 1918. A special election, the Governor says, would cost $200,000 or more and the man chosen would represent the people for less than a year.

The governor will ask for a special session of the legislature. At the time this is written he had offered no suggestions as to whom he might appoint. But he makes it clear that he does not propose to try and get the office for himself and this does away with the rumors that he might resign and secure the appointment.

Congress meets in Washington in another month and by the time it is in session or shortly after, under the governor's plan, it will be possible for Wisconsin to be represented with two senators. This would not be possible if a primary election and a special state election were required. If the general assembly should fail to adopt Governor Philipp's plan, a special election will be necessary.

Attitude of Food Administration Toward Hog Values.

Light on the much-mooted question of hog prices is shed by the message which follows, received from Joseph P. Cotton, chief of the meat division of the United States food administration:

The main purposes of the food administration as to hogs are four: To see that the producer, at all times, can count on a fair price for his hogs so that it will be profitable to him; to see that the farmer increases the number of hogs bred; to limit the profit of the packer and middleman, and to eliminate speculation. All these purposes are necessary because we must have more hogs, so that the ultimate consumer shall at all times get an adequate supply of hogs at the lowest feasible price. We shall establish rigid control of the packer. Fair prices to the farmer for his hogs, we believe, will be brought about by the full control which the food administration has over the buying for the allies, our army and navy, the Red Cross, the Belgian relief and the neutrals, which together constitute a considerable factor in the market.

The first step is to stop the sudden break in prices paid for hogs at the central markets. These prices must become stable, so that the farmer knows where he stands and will feel justified in increasing hogs for next winter. The prices, so far as we can effect them, will not go below a minimum of about $15.50 per hundredweight for the average of the packers' droves on the Chicago market until further notice.

We have had, and shall have, the advice of a board composed of practical hog growers and experts. That board advises that the best yardstick to measure the cost of production of the hog is the cost of corn. That board further advises that the ratio of corn price to hog price on the average over a series of years has been about twelve to one (or a little less). In the past when the ratio has gone lower than twelve to one the stock of hogs in the country has decreased. When it was higher than twelve the hogs have increased. That board has given its judgment that to bring the stock of hogs back to normal under present conditions the ratio should be about thirteen. Therefore, as to the hogs farrowed next spring we will try to stabilize the price so that the farmer can count on getting, for each 100 pounds of hogs ready for the market, thirteen times the average cost per bushel of the corn fed into the hogs.

Let there be no misunderstanding of this statement. It is not a guarantee backed by money; it is not a promise by the packers; it is a statement of the intention of policy of the food administration which means to do justice to the farmer.

With this promise from a department that has been able to make good in fixing values of other products it may be accepted by stockmen with but slight misgivings that hog values above referred to will be maintained. The effect should be to greatly increase the number of sows and gilts kept for breeding purposes.

Need of More Modern Conveniences in the Home.

Some 55,000 letters were sent out by the United States Department of Agriculture some time ago to crop correspondents with the idea in mind of obtaining information so that the department might in the future be of more service to farm women. Attention had been called to the fact that the farm women had been neglected, particularly by the national department of agriculture, and with the purpose in mind of obtaining facts in the case a direct appeal was made to women themselves. Replies came in from every state dealing with the problems and perplexities that had to be met by farm women. At this time we desire to quote from one of the department's correspondents living in the state of Michigan, who writes:

A man should be taught to encourage the wife. If she works hard, let her know he appreciates it; and when she gets a pretty hat or dress, let her know he admires it. A man could do many things to help the woman in many ways, so I would say teach the men.

If there is one place where the American farmer excels it is in getting the utmost out of his wife and family. He will not coöperate, but the combined work of self, wife and family produces a living that another man earns for himself and his family. When you see that same farmer's wife washing filthy towels after the baths of those dirty hired men, you must decide that no one who realizes the value of human brain and human labor could so misuse and misapply it. The trouble with the farm woman today is briefly this: She is not boss of her own job. The farm and home, the business and home, are too near together for the man to attend to the business and leave the direction of the home to the woman. Woman's natural place is in the home, but the farmer is so close to the home, the demands of the business are insistent and the farmer so needing help that he just naturally assumes control of all. On the farm she is the partner in the expenses of the farm. She is the partner when it comes to picking berries, cucumbers, etc., and the farmer doesn't pretend to grow stuff for the cannery unless he has a wife and children who can do the picking, etc. He cannot afford to hire it done.

The woman would not mind the work so much if she were working for something she needed or wanted, but when the hard-earned chicken money saved little by little goes to buy farm seed, pay the hired men or pay for

Family Circle Talks by the Publisher

(Continued from page 3.)

observation recently, from which I believe we may obtain a good lesson. Will you kindly bear with me a few minutes?

In my mail today there came a circular letter which I would never have read—my mail being so heavy and I so busy—had it not been that at the head of the page there was a picture of a sick man, writing in bed. The circular was offering a book for sale. It went on to state that the writer of this book had been sick, in bed, for twenty years. When misfortune befell him he was fixed as many farmers are—with perhaps enough to tide him over for a few weeks, months or possibly years, if exceptionally frugal. But the day came when all that he had laid aside was gone. He was slated for the poorhouse. Then it was that the determination came to him to prove to the world that a helpless invalid might be of some use, after all. He turned to the pen for a living and has kept himself alive, paid his bills and made himself useful to the world by writing helpful, inspiring articles and books from that day to this. I do not need the book he offers me now, but I shall buy it nevertheless.

The other day I heard of another interesting case. A farmer had two sons; one enlisted in the army several months ago, the other was drafted a few weeks ago. The father might have struggled along, gathered his corn crop and pulled through the winter, had it not been that he took sick shortly after the younger boy was taken away. Word of his misfortune spread through the neighborhood; the good-hearted farmers came from far and wide to pick his corn and get things shipshape for winter. When they had finished their work they went in to say goodbye to the man they had helped. They spoke cheerily, wished him well, offered to come again if he needed them. He, poor man, was speechless; he simply turned his face toward the wall and wept like a little child. He had found friends when they were most needed, some places where least expected.

It is a good old world, after all, and there is something for every one of us to do, no matter how humble our lot, how twisted our body, how circumscribed the field of our endeavors. Another invalid in the poorhouse would have meant more taxes for you and for me, another burden on the county. Instead, we have a useful man, doing a good work, proving that the world still has need of him. A hundred acres of corn unpicked might have meant a thousand soldiers lacking food, perhaps a battle lost, perhaps the destinies of an empire changed. Who of us can tell the far-reaching effect of any act, either of omission or commission?

I started with no text, I have gotten nowhere, yet it seems to me there is something in what I have written, that there is a moral to it, after all. I shall leave it to you to seek out. The season is upon us when there are many who need aid and comfort. The heart of the farmer has always been easily touched, his sympathies quickly aroused. Is there, in your neighborhood, a man or a woman who needs a bit of encouragement because they are struggling hard, fighting the good fight when apparently all the world is against them; is there a man or a woman who needs a helping hand, perhaps "a day in harvest?" I repeat, I started with no text, I have gotten nowhere; but I shall sleep better tonight, believing you will "lend a hand" wherever it is needed, that you will speak a kindly word for hoping ears to hear; there is something for all of us to do.

James M. Pierce

fertilizer, it is what wears her out. The farm man will cheerfully purchase what he thinks she needs, but he is a man and has a man's viewpoint. The farm man may be the best man in the world, but no man on earth can see a homemaker's job from a woman's standpoint. A man cannot be a housekeeper or homemaker, especially a man who is working with broad outdoor things. He cannot see the need of time given to cleaning, etc. To his mind the house doesn't need the care that a woman feels important.

Self-expression is the longing of every human heart, and a person who does not so express himself is a failure and life is a disappointment. The farmer expresses himself in the farm. You see many a farm where there is a cement floor in the barn to which he will point with pride—the cellar in the house awful. A sheep dip, but no bathtub; a fine buggy and a poor baby carriage. The farm woman is essentially a homemaker because she is a woman. Any farm woman who had simply her own housework to do with even some little chance to earn to buy the little things which she, not her husband, considers necessary, some little time to do the fancy work to decorate her home, some little choice about the expenditure of money, would be much more contented and happy. On many farms a hundred dollars in cash are not spent in the home in a year.

If the woman's brain can be used for the less strenuous labor of doing the banking and her strength for the lighter work, all well and good, it is what should be; but many a woman is bending over the washtub while her husband drives to town for a pound of nails. The men mean all right, but they are nearer to the primitive man than any other class of people in the world, and community opinion affects them least. You can't teach them by lectures, because you can't reach them; but if a man felt that he was judged by his home rather than his farm—by his wife's appearance rather than his driving horses, the farm woman would not today be overworked.

We think these conditions (absence of labor-saving devices) exist not because the men are selfish or indifferent, but because they do not realize how much time and strength these modern conveniences would save her.

But little comment is needed on this clear, forceful letter because it so ably describes the lot of one type of farm woman. Where there is neglect of the home and its affairs we believe it is in the main not due to selfishness or to indifference, but to the fact that those engaged in the farm work do not in many cases appreciate the real and pressing needs of the home. Many of our readers might find that the mere reproduction of this letter in The Homestead will in itself bring about a much-longed-for improved condition in the home. If it gives offense the individual who is offended concedes his own guilt there and then. We believe that the perusal of this letter will in due time work vast changes in the home environment of many Homestead readers.

Attend Wisconsin Potato Convention and Show.

The program of the sixth annual convention and show of the Wisconsin Potato Growers' Association, which will be held at Madison, Wisconsin, November 19th to 24th, has come to the editor's desk. The purpose of locating this convention in south-central Wisconsin, away from the commercial potato districts, is to interest a large number of farmers in the southern section of the state in a standard variety of market potatoes, in the modern methods of seed selection, seed treatment, cultivation, spraying and marketing. In our orchard and garden department this week some facts concerning the program, speakers and other features will be found. Our best word to farmers of southern Wisconsin is that they should take advantage of this splendid opportunity to learn some new things about the potato business. We have been growing hundreds of varieties of potatoes for a number of years in southern Wisconsin. In fact, there have been so many varieties that in most cases we really don't know what we have been raising. But our neighbors in central and upper Wisconsin have standardized the potato business and as a result they have a splendid market for the well-known varieties in which they are specializing. It is not to be expected that southern Wisconsin will become a potato country, and doubtless a county like Waupaca, for instance, will always lead in potato production over our southern dairy counties, but potatoes can be raised for market with profit in the southern portion of the state. It is just as easy to raise better potatoes and conform more nearly to what the market demands in potatoes, and by so doing get a better price. Pointers on these phases of the business and displays of equipment with addresses by the most prominent potato growers and specialists in the country will help to make the Madison program very enjoyable and profitable.

Conserve the Barnyard Manure.

It is a regrettable fact that very poor care is taken of that valuable by-product on the farm—manure. While no argument is needed to convince any intelligent farmer that barnyard manure is valuable, one cannot escape the conclusion that too little is known concerning the loss of fertility that takes place when manure undergoes fermentation while exposed to the leaching effect of rains. It is difficult to place a definite and exact value on a ton of well-preserved stable manure, but if we consider its content of plant food as having the same value as a like quantity of these elements in commercial fertilizer, its value is pretty high at the present time—about $4.50 per ton. There is another way of determining its value and that is by observing the increase in crop production due to a dressing of manure. On that basis it has a value of approximately $2.50 per ton when normal crop prices obtain

At the Ohio station, for example, wheat under continuous culture produced 11.85 bushels per acre this year, while wheat on similar land under a five-year system of rotation with the application of five tons of manure per acre produced 33.79 bushels—a difference in favor of the manure of 4.4 bushels per ton applied. At $2 a bushel for the wheat this gave the manure an exceedingly high value. In another field eight tons of manure applied to the 1917 crop, in a rotation of corn, oats, wheat and clover and timothy for two years, gave 37.46 bushels per acre as compared with 12.82 bushels under continuous culture without the addition of fertilizer of any kind. Here, then, there was a gain of 3.1 bushels per ton of manure applied. In still another field where eight tons of manure was applied per acre for wheat in a rotation of potatoes, wheat and clover, the yield was 50.79 bushels per acre as compared with 34.66 bushels in a similar rotation without manure. Here there was an increase of two bushels per acre due to the manure. In this latter case the same rotation of crops was followed in both fields, so the increase in the wheat yield was due entirely to the manure added. However, the wheat crop did not get all the value out of the manure, as it is a well-known fact that the effect of a dressing of eight tons of barnyard manure will be noticed on several successive crops.

Moisture conditions were very favorable at the Ohio station this year, which accounts for the exceedingly good showing made by the manured plots referred to. One should not expect to find quite such marked results every year, but the fact remains that manure is an exceedingly valuable farm product and it ought to be better taken care of than is usually the case.

The ideal way to handle manure so far as saving all its plant food is concerned is to spread it on the soil from day to day as it is produced, provided, of course, the land is reasonably level. When this is done losses due to fermentation and leaching are reduced to a minimum. On the great majority of farms this method is not practicable except during a part of the year. For this reason it becomes necessary to store the manure on most farms for a time, at least, and then haul it out when convenient. When it is allowed to lie exposed to the air in a layer over the barnyard, especially through the spring and summer months, the loss of fertility is amazingly large.

The Health of the Hog.

No farm animal can convert farm feedstuffs into flesh and fat as quickly as the hog and it is because of the mortgage lifter's past record in this regard that he is now looked to as the dominant source of the world's supply of fat. Mr. Hoover is, therefore, displaying wisdom when he appeals to the swine raisers of the country to speed up their record in the production of hogs. So far as this year's supply of bacon, hams, sides, shoulders and fat is concerned there is a definite limit to what can be produced, because we have only so many hogs as foundation material to work on. It will help greatly if those who ordinarily market their hogs at the weight of 250 pounds will carry them a little longer this year and finish them up, say at 300 pounds. This will create a market for just that much more corn and it will place the nation in a position to furnish more fat and more meat to our fighting allies.

In order that the best results may be obtained in feeding operations from this time on the factor of chief importance is the health of the hogs that will be finished during the next three or four months. First and foremost must be considered the cholera problem. This, in a way, is simple, and from another standpoint is complex. When cholera once enters a herd it means a loss of practically 90 per cent if no effort is made to head it off. On the other hand, if the first animal that sickens is quarantined, the disease promptly diagnosed and the serum treatment used before the balance of the herd have a high temperature, then it may reasonably be expected that 90 per cent of the animals will be saved. In spite of the fact that here and there men can be found who have had a bitter experience following the use of serum, this product stands today as the only agency that will effectively immune a hog against cholera. In view of the national shortage and also considering the high prices that prevail, every swine breeder should keep himself literally on edge in the outlook for this dreaded disease and handle it in accordance with the suggestion that is here given.

Then there is the question of internal and external parasites. These are the great enemies of thrift and the stubborn means of heading off rapid gains. A hog that is badly infested with worms will just about hold his own under a system of heavy feeding and all the time he is in ideal condition to contract cholera if he should come in contact with the germs. The presence of internal parasites may be quickly detected by the unthrifty appearance of infested animals. They will be dry in the hair, they will have a forlorn look and show very little interest in life generally. When a hog falls into this condition he needs looking after and it is not costly to test the matter out by using a good worm remedy. There are many commercial products on the market that have been well tested out and their use cannot be recommended too highly to those who may be persuaded that there are parasites in their herds.

There are skin diseases also to fight and lice a-plenty in many herds. These are the avowed foes of thrift and no swine breeder who wants to make rapid gains is justified in allowing lice to remain on his hogs for a single day. Spraying or dipping with a good coal tar product is effective, while the hog oilers operate most efficiently to this end. The louse cannot live in the presence of oil and, furthermore, the oil has a beneficial effect upon the skin in keeping in check mange and other skin ailments that are common.

In the matter of feeding it may be said that the most rapid and cheapest gains are not made on corn alone and for that reason our experiment stations recommend using some of the concentrated commercial feeds in order to bring up the proportion of protein in the ration. With prices of grain high swine breeders will resort this season more and more to the use of by-products. Feeding these means the saving of grain that can be used direct and wherever a hundred pounds of rich, palatable by-product can be made to save a hundred pounds of grain the saving should be effected.

BADGER FARMER'S MAIL BAG
FARM EXPERIENCES

Hogs Not Good Enough.

To the Editor:—I am firmly of the belief that Wisconsin farmers are raising too many hogs, but not enough good hogs. They are put on the market too light—not fed to a finish. On October 25th the receipts of hogs at the eleven principal markets were in round numbers 64,000 and for the week 305,000. Many of these hogs were light in weight. They could be easily made to weigh twenty-five pounds more and with little additional feed. One can readily see the great amount of increase in the pork production as one goes through the stockyards. He sees too many hogs that lack good breeding and good feeding. The Wisconsin farmer can greatly increase the profits in the production of pork by decreasing his breeding stock; first by having a brood sow that will raise nine or ten pigs, second, by making this sow produce two litters per year. The fall pigs coming the first of September can be easily wintered and put on the market in June or early fall when the market is good. The dairy farmer that has milk has the advantage, as he don't have to buy any of the high-priced feeds that go to make the bone of the pig. He will have less breeding stock to feed and more feed for the growing pig. Where the farmer only raises spring pigs he goes on the market in the fall when prices are down largely by the great rush of hogs and the eastern buyers are not then in the market, as they generally have their home supply for a while, consequently there is no competition at this time of the year and the packer too well knows that the rush of hogs is coming and a fall of prices will likely occur.

I mentioned the increase of the litter which is a very important one indeed, and this can be easily done, for large litters generally are developed by selections; thus a strain becomes developed that will invariably bring large litters. If your sows have not in the past been producing large litters, you should try and get a sow that you know from some breeder or nighbor that has such a strain and then by getting a sire of such a strain and by proper feeding and care you can increase your crop of pigs easily one-third or more. I am firm in my belief that a pig should weigh better than 200 pounds before he is placed on the market. At the present high prices of feed one must watch the little leaks and make the most of every opportunity to increase his profits by breeding only the best. I am not advocating all farmers to breed full-blooded hogs, but better hogs, and this can only be done in two ways—first, by breeding. This means a full-blooded sire, at least. Second, by better feeding and care. I feel that they should be together, as they become so closely allied that they soon become one and inseparable. Now one word to the man that intends to buy better stock or get a few registered sows or even a boar. Don't do it unless you make up your mind to give them full-blooded care and if you do this I assure you that you will never live to see the day to regret the money you spent and the extra time and labor.

The time is here for the farmer to double his efforts in increasing the pork production both for his country's sake and for profit to himself and family. If some of our boys are risking their lives for us, let us resolve to at least expend a little extra thought, time and labor to see that they have proper food and this can be done by farmers only, for remember every extra pound of pork, beef or wheat produced by us is helping to bring this war to a successful close so much sooner and bring our boys home.

Crawford Co., Wis. James Fisher.

Motor Cultivator for Corn.

To the Editor:—We have recently bought a motor cultivator, which is something of a new thing in this part of the country, and we have, of course, not had occasion to try it out as yet, but before buying we talked with a man who had used one in Oneida county all the past season and who was very much pleased with it. We would certainly have been tied up with farm work this year had it not been for our tractor, which for a time was doing the work of thirteen horses and four men and is now plowing close to eight acres in ten hours. It was because of the good work done by our machine, which is a 12-25, and because of the prospects of even worse labor conditions that we decided to buy a motor cultivator. We expect to get good results from the motor cultivator and thoroughly believe in machinery whenever it can be used to help out labor conditions. Stiles Farms.

Oconto Co., Wisconsin.

Demand Speculating Be Done Away With.

To the Editor:—I will try to give you my views on why Wisconsin farmers are not raising as many hogs to increase the production of pork. First of all, corn is too high to raise hogs profitably, corn selling for $2 per bushel and live hogs at present selling at Chicago market for $15.50 to $16 per hundredweight. The big packers know well enough the bulk of hogs are being sold from now until January 1st and when the packers have them purchased, I presume, up goes pork.

The experience we could see last year with the wheat when the speculator practically had all the wheat, then it went up to $2.50 and $3 per bushel, but none in the farmer's hands. Farmers are getting discouraged with such gambling and grafting. I am getting somewhat off my subject. Experiment stations say it takes about sixteen to eighteen bushels of corn to produce a 200-pound hog. Then corn at $2 would bring $33 and other feed, care and capital invested, etc., and that same hog would bring $30 at the present price.

Farmers in this vicinity will keep less than half of the brood sows that they kept last year. This will mean another decrease of pork production unless the government or food administrator will step in and guarantee a fixed price so the farmers will be sure to raise hogs at a profit for the coming year. This would need prompt action before the farmers have disposed of their brood sows, for hogs are the quickest producing meat animals and especially at this critical period of world meat shortage. On the other hand, it will mean high-priced pork for the consumer, but the farmer must be protected first, of whom it is expected to feed the world.

Labor is involved in this somewhat, more so in grain production and dairy products, for we have too many consumers and not enough producers. Farmers are raising only what they need for themselves, for with the drifting class of labor it is too uncertain and the speculator makes the money, so it's up to the government to step in and do away ith the board of trade and grafting. R. G. Stine.

Buffalo Co., Wisconsin.

Handling Alfalfa Crop.

To the Editor:—Regarding our 1917 alfalfa hay crop will say that it wintered in fine shape, and the first cutting was larger than we ever had before, the second cutting fairly good, the third cutting poor, yielding about one-third of a crop. This was due to the continued dry weather and grasshoppers. We cut our third crop early enough so that there will be a six-inch stand for winter protection.

We put up our hay crop with the side-delivery rake and the hay loader, and we unload the hay with slings. We use the tractor for pulling the wagon and the hay loader; use two wagons. One team takes the wagons to and from the field and we use another team on the hay rope. There is usually four working at the hay, one runs the tractor, one loads, one hauls the hay from the field and the other one mows the hay away. We average a load in the barn every half hour.

We put up our hay rather green and do not lose any leaves in the field. We spread the hay over the entire barn. By doing this the hay will cure better.

We have about thirty-five acres in alfalfa this year. This fall we seeded twenty-five acres to winter wheat, one and one-half bushels to the acre, which we will seed to alfalfa in the spring; will seed twenty pounds to the acre.

We feed both the horses and cows alfalfa hay. Even the cows that we run for Advanced Registry records get nothing but alfalfa hay and corn silage, and they all make from fifty to 150 pounds more butter fat than is required to make. Hiram Michels.

Fond du Lac Co., Wisconsin.

Ration for Dairy Cows.

To the Editor:—In my judgment the best formula for feeding dairy cows for the next three months in this section would be barley and oats supplemented with oil meal or bran or cottonseed meal, if silage is a part of the ration. Our oats and barley crops were excellent this year and, while the cost is greater than in other years, the increase is not in proportion to the increase in price. Of course, if a farmer must buy these grains the market price is the important thing to consider, but if he raises the grain I think he ought to feed it. The proportion of oats, barley, bran, oil meal or cottonseed meal will depend largely upon the kind of roughage the individual dairyman has to feed.

George C. Ogle,
Official Tester Dunn County Cow-testing Association.

Keeps Cows in Good Winter Condition.

To the Editor:—In regard to grain rations for dairy animals for the next three or four months, many farmers say that feed is too high to do much feeding this winter. Figuring silage at $6 per ton, alfalfa hay at $25 per ton brings the cost of roughage alone for thirty days to $6.75. The average grain ration figures out at $2 per hundred, by feeding one pound of grain daily to each pound of fat produced in seven days brings the cost of grain in the case of a cow producing thirty pounds of fat in a month to $4.20 plus $6.75 for roughage, which makes a total cost of feed $10.95. Figuring butter fat at 60 cents gives an income of $18, leaving a profit of $7.05 for thirty days above cost of feed. This is a narrower margin for profit than usual on account of high prices of roughage.

Equal parts of bran, gluten and oats furnish a fair grain ration for local conditions. Also bran, ground oats, dried brewer's grain and gluten, equal parts, give fair results.

The figuring out of a grain mixture varies some with each herd, depending on the condition of the herd and the feedstuff available on the local market.

The biggest profit gained from winter feeding is by keeping the cow in good condition so that she maintains her flow of milk and comes out in good condition in the spring; when she goes to pasture she gives a heavy flow of milk at once, otherwise it takes her two or three weeks to get started. A cow well wintered is half summered.

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

War Tax Stamps.

On and after December 1, 1917, U. S. stamps must be affixed to certain instruments in writing to raise taxes for war purposes. The stamp on a document must be furnished and attached by the party who makes or issues the document. The law does not require stamps on any government instrument, nor on stocks and bonds issued by coöperative building and loan associations, or mutual ditch or irrigating companies. A stamp must be initialed and dated by the person who attaches it to the document. Anyone who makes or issues a document requiring a stamp, without putting a stamp on it, is liable to punishment, and persons who issue fraudulent stamped documents are liable to penalties. The commissioner of internal revenue provides proper stamps and collectors of internal revenue in the various districts furnish them to banks that are government depositaries, where they can be obtained by persons who desire them.

The following instruments must be stamped, as follows, viz.: Bonds of indebtedness, 5 cents for each $100 or fraction; indemnity and surety bonds, 50 cents; capital stock issue, 5 cents for each $100 or fraction, and the stamps must be affixed to the stock books and not to the certificates issued; sales or transfers of capital stock, 2 cents per $100 face or market value; sales of produce on exchange for future delivery, 2 cents per $100 face value; drafts and checks, other than at sight or on demand, checks and promissory notes, 2 cents per $100 or fraction; conveyances, exceeding $100 and not exceeding $500 in value, 50 cents, and 50 cents for each additional $500 value; custom house entry, not exceeding $100, 25 cents, if more than $100 and not exceeding $500, 50 cents, if more than $500, $1; withdrawal from customs bonded warehouse, 50 cents; proxy, 10 cents; power of attorney, 25 cents; parcel post packages, 1 cent for each 25 cents transportation charge.

Law Questions.

Rights of Farmer—Lights on Vehicles.

Mr. W. F. Liebenstein, Cascade, Wis.—(1) Where nut-bearing trees are in the roadway through a man's farm, has the farm owner a right to gather the nuts, or has anyone coming along the road a right to do so? (2) What is the law of Wisconsin about carrying lights on a buggy or wagon at night?

Answer.—(1) The farmer has the exclusive right to gather nuts and no one else has any right to do so. (2) The law of Wisconsin provides for the carrying of lights on motor vehicles, but does not require lights to be carried on buggies or wagons drawn by animals.

Grafting Supervisor.

A Subscriber, South Range, Wis.—A supervisor of a certain town in Wisconsin, hired a man to work for him on his farm, for one dollar per day, and when said man was put to work on the roads, the supervisor agreed to pay him the same wages the town paid for like work, which was $2.75 per day. This laborer drove the supervisor's team working on the roads for the town, nearly all of the time and did very little work on the farm. Pay day for road work was every two weeks and the supervisor in turning in his team's time to the town board, represented the team as belonging to the laborer and he signed the checks and turned them over to the supervisor, who cashed them. This has been going on all summer. When the supervisor and the laborer settled, the supervisor paid the man $1 per day, and kept the other $1.75 per day for himself. What steps can be taken to compel the supervisor to refund this money to the town and what other remedy, if any, is there in the matter?

Answer.—A suit can be brought against the supervisor for the amount of money he wrongfully kept from the town and judgment obtained against him for the amount. Also a taxpayer of the town may make charges against him to the circuit judge and have the supervisor removed from office. Also the district attorney may proceed against him for embezzlement and have him tried, and, if convicted, sent to the penitentiary.

Colt Dead in Pasture—Liability.

A Subscriber, Neshkoro, Wis.—T wished to take in colts to pasture on his land. In May, 1917, K put a fine male colt in T's pasture. On October 7th, K went to get his colt and found it dead in T's pasture, but a short distance from the public road. It then seemed to have been dead for a week, and its body could easily be seen from the road. Can K compel T to pay for the colt?

Answer.—K can compel T to pay him the value of the colt, provided K can prove that the loss of the colt was caused by T's negligence or carelessness; otherwise, he cannot compel T to pay for the colt.

Division of Partition Fence.

A Subscriber, Bangor, Wis.—I own a farm in Wisconsin, and some of my neighbors who occupy adjoining farms are renters. The partition fences between my farm and the adjoining farms are in poor condition, and I wish to have them fixed up. I have had some difficulty in agreeing with the occupants of adjoining farms about which end of the partition fence I should keep in repair. I think if I stand on my own land facing the adjoining land, the end of the fence to my right hand is the part that I am lawfully required to keep in repair. What is the law of Wisconsin on this matter?

Answer.—The idea you have about how to divide a partition fence between farms of adjoining owners is very prevalent in the Middle West, but it is not correct. Owners of adjoining farms may agree upon how the fence is to be divided. Such agreement must be in writing signed and sealed and witnessed by two witnesses and recorded by the town clerk. If they cannot so agree, either one may apply to the supervisors of the town to view the premises and assign to each one the part of the fence which he must build and keep in repair.

Regulation of Slaughterhouses.

A Subscriber, Albert City, Iowa.—How near to a main traveled public road in Iowa can a person lawfully operate a slaughterhouse?

Answer.—The law of Iowa does not fix any distance for a slaughterhouse to be operated from a public road, but the law requires all slaughterhouses to be kept and operated in a sanitary manner—kept clean, and free from dirt, obnoxious odors, etc.

My Stock Tonic is never peddled.

25-lb. Pail, $2.00; 100-lb. Drum, $6.50.

Why Pay the Peddler Twice My Price?

Dr. Hess Stock Tonic is a Conditioner and Worm Expeller

Keep Your Animals in Condition

Now is when your stock need special attention because the change from pasture to dry feed is one of the most critical periods of the whole year.

You can lose more pounds of summer gain through November neglect than you can get back all winter. Keep up the good condition—keep up the summer thrift—keep out the worms.

Dr. Hess Stock Tonic

Drives Out the Worms. Makes Stock Healthy

Keep the animals' systems right and you need have little fear of disease. Stock Tonic tones the stomach and the digestive organs, gives better action to the bowels, improves the blood, purges of worms, and gives real life and vigor. The *Nux Vomica* in it aids digestion. *Quassia* is a true tonic and a worm expeller. The *Sulphate of Iron* is a blood builder and worm expeller. There is *Epsom Salts* for a laxative, and *Nitrate of Potash* to act on the kidneys.

Why Pay the Peddler Twice My Price?

You buy Dr. Hess Stock Tonic at an honest price from a responsible dealer in your town who is authorized to return your money if it does not do as claimed.

25-lb. Pail, $2.00; 100-lb. Drum, $6.50.

SAMPLES OF WISCONSIN DEFENSE WORK. UPPER VIEW—PEDIGREED RYE. CENTER VIEW—CORN OF HIGH-PRODUCING STRAIN. LOWER VIEW—FIELD OF ADVANCED BREEDING, PEDIGREED BARLEY.

RECENTLY one of our readers asked us what the State Councils of Defense have done in the way of helping or attempting to help farmers. This gave The Wisconsin Farmer the idea of communicating with the secretaries of our county councils and asking them what line of work had been taken up. The letters which are herewith attached are a portion of those which we have received in response to our inquiries. Inasmuch as they relate the character of the work which has been going on in several counties and discuss many topics of general interest, we believe they will be well worth reading:

Clark County.

To the Editor: Our State Council of Defense has been sending out a number of circulars to our dairymen farmers. As you know, this is purely a dairy county. A considerable number of silos have been erected during the past summer, indicating that the circulars have had good effect along this line. One of the things we are aiming for is to educate the farmers to have their cattle, or part of them, freshen in the fall so as to assure an even flow of milk during the whole year.

The high cost of milk and its products has stimulated the industry in this county and the farmers are gradually increasing their herds, both in quality and quantity. Outside of the corn, the products of this year have been excellent.

For next year there are no definite plans except to follow out the same methods we have been using this year. We will need, however, seed corn next spring. A. L. Devos,
Sec'y Clark County Council of Defense.

Walworth County.

To the Editor:—Here is an idea of what our State Council of Defense in Walworth county has done:

We raised $5,000 early in May. We carried on twenty-one food campaign meetings during April and had an attendance of from 150 to 700. We established canning centers at Elkhorn and Geneva. The ladies have over 1,000 quarts of canned vegetables which they are holding for any emergency. Had twelve canning demonstrations under the direction of Miss Martin, woman member of the council. We distributed 5,127 bushels of seed potatoes, also some wheat and buckwheat. As a result of our silo campaign we now have 250 more silos than last year. Had a patriotic picnic at which 7,000 people were present. We have a boys' working reserve carried on under the direction of the secretary of the Y. M. C. A. Two thousand five hundred boys are enrolled. Established a labor bureau and hired seventy-seven men for the farmers of the county. In addition, we have an organization of business men who go out and help the farmers. Grant Harington,
Sec'y Walworth County Council of Defense.

Milwaukee County.

To the Editor:—As you know, Milwaukee county is not primarily an agricultural county, and our problem is one of distribution rather than production.

Last summer, under the general direction of the County Agricultural School, and with the cooperation of the City Department of Public Works, much vacant land in the city was plowed up and planted to gardens. These gardens were confined to individuals, but in the main were supervised by experienced men furnished by the agricultural school. While there were, of course, a good many failures, the results on the whole were most successful. Many persons obtained garden truck to store away for the winter in addition to what they got during the season. We shall extend this work even further next year.

We are now negotiating for the services of an agricultural agent for the county who will handle matters relating more directly to production, and who will keep in close touch with the farmers in the county. We have arranged to get the returns from the agricultural census taken by the State Department of Agriculture for our use in this work. Steps have been taken to get boys in the city schools released for part time in order to take instruction in agricultural work. The County Agricultural School and the city school board are coöperating with us in this matter. We hope in this way to train a body of young men who will be in a position to render emergency service to the farmers during the seasons of planting and harvest. Osmore R. Smith,
Sec'y Dept. of Public Welfare.

Iron County.

To the Editor:—The State and County Councils of Defense have worked wonders in Iron county toward the development of farms. Never before in the history of Iron county have the farmers taken more interest in development of their farms, both in the utilization of space and cultivation. Every foot of space has been utilized and results show a large income in the production of crops and live stock. Potatoes, our chief crop, promise to be a bumper crop and of good quality. In some localities in the county the yield of potatoes was harvested without a hitch, but in the vicinity of Hurley and Sax, in the northern part of the county, the early snow and cold weather have interfered with harvest and at the present time there are thousands of bushels in the ground covered with two to four inches of snow and crust. It is a serious situation and unless we have a change of weather it will mean a loss of probably 65 or 70 per cent of the potato crop for Iron county. In most localities the farmers are digging their potatoes from beneath the snow. This is a very strenuous job and very detrimental to the potatoes. The Burbank and Early Rose seem to mature here better than the Rural. No better potato ever grew than the Early Rose raised here last year. Farmers in this locality are going into stock raising very extensively, installing silos, etc. Stock raising is the coming thing because grass is plentiful, there is sufficient moisture, good water and plenty of undergrowth for protection of stock. Market good and prices at the top notch.
E. S. Hagen,

Sheboygan County.

To the Editor:—The Sheboygan County Council of Defense has been instrumental in putting into cultivation 1,800 acres of land in Sheboygan and immediate vicinity. Immediately the call came for gardening the vacant lots, we listed every foot of available territory in the city of Sheboygan and on the outskirts, which had not recently been cultivated. The Sheboygan Country Club presented us with five acres of their golf course, which were plowed and divided into twenty-four plots of ground 50x150 feet. The Crocker Chair Company, the Kohler Company, the Porcelain Enameling Association and the Vollrath Company rented big tracts of land for their employes. For the benefit of our town people we also conducted canning demonstrations and had public lectures on how to plant and cultivate. A. L. Summers,
Sheboygan county, Wis.

St. Croix County.

To the Editor:—The farmers of St. Croix county have been encouraged to build silos and this summer 160 have been erected and about 100 more started as soon as it was found that

(Continued on page 23.)

To the Outdoor Workers of America

Make sure that your feet are "U. S. protected" against the assault of wet and cold. Keep them warm and dry, comfortable and healthy in all kinds of weather by wearing

U. S. Rubber Footwear

There is a specially designed shoe for every outdoor worker—farmer or fisherman, miner or lumberman, stockman or dairyman.

This heavy service, double duty line offers a style purposely adapted for every kind of outdoor work. Reinforced where the wear is greatest. Built to baffle biting cold, rain and snow.

The "U. S. Seal" is the trade mark of the largest rubber manufacturer in the world. It is on every pair of this rubber footwear. It is your protection. It stands for comfort, long wear and economy. Look for the U. S. Seal and always ask for it.

For sale everywhere. Your dealer has the style of U. S. Rubber Footwear to meet your needs or can get it for you.

CURRENT EVENTS

THE hopes of the allies for an early and a decisive victory over the Germans well-nigh vanished last week, when the Germans and the Austrians united to inflict a severe and almost crushing defeat upon the Italians, driving them out of the Austrian territory they had won at such great cost, and by so many months of fighting, and forcing them back into Italian territory. The Italians were confronted by a Teutonic army much superior in number and guns. General Cadorna, the Italian commander, is given credit for withdrawing his army in order, so that the defeat was not converted into a rout, but both sides agree that the Italians lost over 100,000 men, mainly as prisoners, and great quantities of guns, ammunition and supplies. Italy has been pecking away at the Austrian lines for a year or so and was having comparatively easy work, when all of a sudden the storm broke upon her and victory was turned into apparent defeat. The defeat has not disheartened the allies, however, as the man power of Germany is undoubtedly dwindling. French and British troops, and perhaps American, are being rushed from the western front to Italy and there is hopes of stemming the tide of defeat before Italy is completely crushed, as was the case of Russia when the Teutonic allies went after it in real strength. The new Italian premier issued this message to the world: "Let the enemy know—let the world know—that the Italians under the burden of their inexpressible grief at the sight of they country invaded, have made it a point of honor to sink all their internal differences so as to strengthen their will and energy in order that again our native soil may be consecrated by a victory which cannot fail us." Notwithstanding this assurance, Italy was in a bad plight last week and the allied hopes of early victory went glimmering.

STUPENDOUS preparations to muster every ounce of American man power and economic resources for the defeat of Germany will be the answer of the United States to the Teutonic victories over the Russian and Italian armies, which mean a prolongation of the war, according to Washington news writers. The following is said to be the official program as already talked over by President Wilson and his cabinet: Legislation by congress authorizing the expansion of the army to a maximum of 5,000,000 men. Lowering of the minimum draft age to nineteen and raising of the maximum draft age, possibly to thirty-five years. Examination of the second increment of 687,000 draft registrants, beginning in December, with a view to sending them to the training camps by early spring. Flotation of the third liberty loan, probably for $3,000,000,000, next February. A marked increase in war taxation, particularly on the profits of business. Legislation making it possible to restrict the manufacture of nonessentials and to concentrate the labor power of the nation on the production of ships and munitions. All hopes of an early peace have vanished, but the United States is in the war to stay and war preparations will be rushed to completion even sooner than was expected before the recent reverses of the allies.

GERMANY lost 6,000,000 men in the three years of war, according to a declaration in the reichstag by the independent socialist Ledebour. A report of his speech reaching Washington through Switzerland states that, contemplating the prospects of a fourth winter campaign, the socialist leader said: "You have not, evidently, gentlemen, an exact conception of what war means. We have had 1,500,000 dead, 3,000,000 or 4,000,000 wounded, of whom 500,000 are crippled for life, and 2,000,000 absolutely invalided. That makes altogether 6,000,000 men lost during three years." It is stated that official information confirmatory of these figures has been in possession of American officials for some time.

ONE HUNDRED THOUSAND manufacturers, wholesalers and other distributors of staple foods were placed under license by the government last week in a widespread campaign to reduce the price of living necessities or at least to keep them from raising any higher. The licensing will continue during the duration of the war. The food administrator estimates that when the lists are complete there will be about 100,000 licensees, including importers, packers, canners, manufacturers, wholesalers, commission men, brokers, auctioneers, storage warehouse men, together with retailers doing more than $100,000 business annually, which embraces mail order firms and chain stores. Small retailers will not be licensed, but they are subject to the provisions of the food law itself, which forbids speculation, hoarding and excessive profits. They also will be controlled through the licensing regulations controlling wholesalers, who will be required to cut off the supplies of dealers of any size and in any branch of the trade who exact exorbitant profits on the necessities of life. The licensed foods include beef, pork and mutton, fish, poultry and eggs, milk, butter, cheese, flour, sugar, cereals, lard, beans, peas, fruits, vegetables, several lines of canned goods and other products. The purpose of licensing are stated as follows: "First—To limit the prices charged by every licensee to a reasonable amount over expenses and forbid the acquisition of speculative profits from a rising market. Second—To keep all food commodities moving in as direct a line and with as little delay as practicable to the consumer. Third—To limit as far as practicable contracts for future delivery and dealings in future contracts." Eventually, smaller dealers will undoubtedly be brought under the system, so that, so far as humanly possible, no one can take advantage of another and raise prices unduly because of war necessities.

HARDLY had Brazil declared war against Germany, allying itself with the United States, before disclosures were made justifying its course. Sinister aims of Germany to overthrow the Monroe doctrine and gain a foothold in South America were divulged through publication by Secretary of State Lansing of two additional telegrams from Count Luxburg, the German charge at Buenos Aires, to the German foreign office. In these telegrams Count Luxburg urged the German government to send a submarine squadron to South American waters to intimidate the Argentine government, then threatening to break relations, explaining that the presence of such a squadron would "exercise a decisive influence on the situation in South America." Defiance of the Monroe doctrine was seen in the conviction expressed by Luxburg in one of his telegrams that Germany would be able to "carry through our principal political aims in South America," including the "reorganization of South Brazil." President Wilson welcomed Brazil into the ranks of the allies with this telegram to the Brazilian president: "Allow me, speaking for the people and the government of the United States, to say with what genuine pleasure and heartfelt welcome we hail the association with ourselves and other nations united in war with Germany of the great republic of Brazil. Her action in this time of crisis binds even closer the bonds of friendship which already united the two republics." Brazil has already seized the German ships interned in its ports and will do its share in carrying the war through to allied victory.

THE government last week took steps to restrict enterprises not essential to conduct of the war by forbidding use of open top freight cars on and after November 1st for transportation of material for roads and highways, theater construction and manufacture of pleasure vehicles, furniture and musical instruments. The restriction of nonessentials was imposed through an order, issued by Robert S. Lovett, priority director of the war industries board, prohibiting use of open top cars, excepting flat cars, for carrying any of the specified materials for private orders. Coal is exempted and the order does not apply to shipments for the government, or to shipments in closed box cars. The order is expected to provide early relief for the car shortage which has affected the transportation of "coal, coke, ore, limestone, sugar beets, sugar cane, sorghum cane and raw materials for use in the metal, sugar and fertilizer industries and other commodities necessary to the national defense and security." Heretofore, said Judge Lovett's order, the transportation of these materials has been hampered by insistence of manufacturers on cars for nonessentials.

UNITED STATES government expenditures of $1,000,000,000 is the record which the month of October has established at the treasury department. The total, which includes loans to the allies, may exceed even this huge sum possibly by $100,000,000. The increase in the daily expenditures is greater at the present time than it was a month ago and is steadily growing. A $2,000,000,000 month, officials assert, is not far off. It may be reached with the retirement of short time treasury certificates—to be met out of liberty bond receipts by midwinter. Expenditures for the fiscal year thus far have reached the total of $3,446,659,764, of which $1,770,700,000—more than half—is represented by loans to the allies. These loans and the interest upon them are to be repaid by the borrowers and, therefore, do not represent actual expense to the American people.

IT IS an open secret that until America came into the war the method of financing our purchases there and the question of exchange were not only serious problems but, in my opinion, almost insoluble problems." This statement was made by Andrew Bonar Law, chancellor of the English exchequer, in an address in the house of commons introducing a vote of credit for $2,000,000,000. "I am glad to be able to take this opportunity of saying how much reason not only the British, but all the allied governments have for appreciating the very generous way in which the United States government has come to their assistance in financing purchases in America," the chancellor said, and added: "The fact that America has given generous assistance at times when she was incurring expenditure at a heavier rate than any of the allies I believe it my duty publicly to acknowledge." The chancellor said the expenditures of the army and navy exceeded the budget estimate by $2,500,000 daily. The average daily expenditure since the beginning of the financial year has been $33,240,000 or $6,150,000 above the budget estimate.

Three Useful Machines

THREE International machines that will pay their way on any farm where there is corn to market or livestock to feed are:

Keystone Shellers, adaptable to large or small ears, shell hard or soft corn clean without cracking the kernels or crushing the cobs. There are eight styles in 1, 2, 4, and 6-hole sizes, with capacities from a few ears shelled by hand, up to 4,000 bushels per day.

International Feed Grinders, for grinding small grain, corn on the cob, or corn in the husk, come in three styles with regular or special plates, 6", 8", and 10" in diameter. Capacities from 5 to 30 bushels per hour take care of all ordinary requirements.

Mogul Kerosene Engines furnish steady, economical power for these and other farm machines. They are simple, reliable, satisfactory; operating on the fuel that is cheapest or most convenient to buy. Mogul kerosene mixers; built-in magnetos that make batteries unnecessary; enclosed crank cases; full equipment, ready to run; are features of all Mogul engines, from 1 to 50-H. P.

Equip your farm with a set of these three useful machines. See the local dealer or write the address below for complete information.

Holding Seed Wheat.

Wisconsin farmers and dealers who have supplies of spring wheat suitable for seed purposes, and who wish to hold it for this specific purpose, will be exempt from the thirty-day storage limitation law now in force under the regulations of the Food Admnistration Grain Corporation—providing their claims meet the approval of field representatives now appointed for that duty.

Grain which is intended for bonafide seeding purposes may be held until the end of the next seeding season. To apply automatically to such specific lots of grain as the committee approves, blanket licenses granting the right to hold grain for more than thirty days will be issued to farmers and dealers of the Food Administration Grain Corporation.

Seed so held may not be sold for prices to exceed 15 per cent advance over the selling price of No. 1 wheat at the elevator or other point where it is stored.

The United States Department of Agriculture is urging operators of elevators and warehouses to coöperate fully in this endeavor to assure by means of this arrangement an adequate supply of high-grade seed wheat for use next spring. Only in special cases will the holding of winter wheat for use in the fall of 1918 be approved.

Under the specific regulations of the new seed stocks saving campaign a department whose duty it shall be to examine spring wheat and clover seed samples has been established at 320 Flour Exchange Building, Minneapolis, to cover the district included in the entire spring-wheat belt east of the Rocky Mountains. This belt is adjusted to include the Wisconsin spring wheat section.

The Minneapolis branch of the seed stocks committee will be in charge of W. L. Oswald, until recently a member of the field crops department, Minnesota College of Agriculture. To this office must be submitted all samples of seed grain intended to be held for sale as seed and thereby entitled to exemption from the thirty-day storage limitation.

A. L. Stone, state seed inspector, with offices at the college of agriculture, University of Wisconsin, has been asked to inform Wisconsin farmers about the provisions of the seed-holding regulation. Mr. Stone's office already analyzes samples of grain and grass seed under the state seed inspection law. Where the samples are from seed intended for sale a nominal fee is charged for taking germination and purity tests. Copies of these test results must be attached to the grain before it can be sold. Where the seed is intended for home use only and is not for sale no fee is charged.

"Unless seed wheat intended for sale is first submitted to the office at Minneapolis no license to hold it for more than thirty days will be granted," stated Mr. Stone. "Of course, after the Minneapolis office has examined the sample sent to them by a Wisconsin farmer, all the farmer needs to do then is to label the seed according to state laws and it is ready for sale. The movement is simply to organize the seed trade so that enough seed wheat and clover will be ready next spring."—[Wisconsin Experiment Station.

Storm Can't Blow It Out

HERE'S a 400 candle power hand lantern. Pure white light, wind-proof, storm-proof. Great for use around the house, barn, milking pen, feed lot and wherever a safe, portable light is needed.

American Dark Chaser

Costs less than 1-3 cent an hour to run. Nonbreaking mica chimney. Nowick. No smoke. Cleaned automatically. Finished in polished nickel plate. Ask your dealer or postal brings illustrated circular. Address

NEWS OF THE SALE RING

Waukesha County Guernsey Breeders' Two-day Sale.

The Waukesha County Guernsey Breeders' sale, which was held October 31st and November 1st at Waukesha, Wis., was in most respects a successful event. The sale of pure-breds on October 31st was entirely satisfactory. However, on November 1st, when the pure-bred bulls and high-grade Guernseys were sold, there was a noticeable slump in prices, especially when inferior animals were brought into the ring. Dry cows and two-year-old heifers did not sell well, and the average for the grades was not up to the sale held a year ago. During the two days there were about 160 animals sold. Seventy-eight pure breds averaged $325; 26 pure-bred bulls $116, and 56 grades $80 each. Grade cows due to freshen soon or giving a heavy flow of milk sold well, some of them bringing as high as $200. In the pure bred sale there were 22 animals that sold for $350 or more. Chas. Hill, Rosendale, Wis., consigned 13 animals that sold for $350 or above; J. H. Williams, Waukesha, consigned one cow that brought $525; Geo. W. Browne, of Waukesha, sold three head that averaged $592; Geo. McKerrow & Sons Co., Pewaukee, also sold three head that averaged $397; Wm. Jones' cow, however, was the sensation of the sale. Maria's Glenwood topped the sale at $2,500 and went to Geo. Hynicks, Lebanon, Pa. Mr. Jones also bought another cow for $600. The principal buyers of the real good stuff were R. S. Pope, Waupaca, Wis.; McCanna's Edgewood Stock Farm, Burlington, Wis.; A. P. Lovejoy, Janesville, Wis.; F. E. Fox, Waukesha, Wis.; Wayne Munn, Janesville, Wis.; Geo. Hynicks, Lebanon, Pa.; Benj. Omsrud, Stougton, Wis., and Reuben Erickson, Copas, Minn. H. C. Reinhold, East Petersburg, Pa., and C. D. Wolcott, Strawberry Point, Iowa, were the leading grade buyers at the sale. Red Cross Lady, that was donated to the Waukesha County Guernsey Association, was sold for $725 to R. S. Pope, Waupaca, Wis. Twenty-five dollars from this price was deducted for expenses and the remainder went to the Red Cross. The Waukesha County Association should be congratulated on having so generous a member as Mr. Browne, for he consigned one of the choicest heifers of the sale in order that this association should be well represented in this worthy cause. Following is a list of sales:

FEMALES.

Imp. Blondine of Edgemoor, Oct., 1915; Tom Woodman, Pawpaw, Wis. $250
Kentrover Dorothy, Nov., 1915; Geo. R. Boulden, Onawa, Iowa 150
Imp. McKerrow's Golden Noblesse, Nov., 1915; Tom Woodman 225
Park's Nancy, Oct., 1914; Tom Woodman 255
Imp. Brighton Peridot, Dec., 1913; A. P. Lovejoy, Janesville, Wis. 300
Golden Peridot of Edgemoor, Jan., 1916; A. P. Lovejoy 300
Park's Isabella Tilly, July, 1916; Reuben F. Erickson, Copas, Minn. 190
Imp. McKerrow's Governess Carterest, Sept., 1915; C. J. Templow, Pewaukee, Wis. 225
Imp. Dewdrop of Sarnia, July, 1913; Ben Omsrud, Stoughton, Wis. 230
Coventry Cora's Best, Sept., 1913; Powers Bros., Owen, Wis. 185
Belle of Troy Center, Aug., 1911; F. E. Fox, Waukesha, Wis. 155
Lizette's Beauty 2d's Daughter, Aug., 1916; John T. Whalley, Portland, Ore. 275
Imp. Dandelion of Sarnia, July, 1913; R. S. Pope, Waupaca, Wis. 525
Imp. Brilliantine of Edgemoor, Dec., 1915; A. P. Lovejoy 500
Imp. Mont Val Girl 4th, Feb., 1913; Wayne A. Mumm, Janesville, Wis. 270
Imp. Dusty of McKerrow Farm, June, 1915; Christ Jack, Weyauwega, Wis. 310
Leoparda of Lone Mound, May, 1908; R. S. Pope, Waupaca, Wis. 300
Flossie M., Nov., 1913; H. Hanna, Denison, Tex. 135
Double May Rose of Park Farm, Sept., 1915; Geo. K. Hynicks, Lebanon, Pa. 525
Glenwood's Pansy of Edgemoor, Aug., 1915; R. S. Pope 425
Tristan's Beauty, July, 1916; G. Kingston & Son, Waukesha, Wis. 300
Bernice D. of Hilly Beach, May, 1911; J. A. Butter, Milwaukee, Wis. 155
Troy Center Beauty 2d, Sept., 1908; G. D. Love, Waukesha, Wis. 220
Imp. Lily of LaCroix, Sept., 1913; Ben Omsrud 380
Valley Rose of Edgemoor, April, 1916; R. P. Dopp, Lake Crystal, Minn. 310
Imp. McKerrow's Clematis Governess, June, 1915; McCanna's Edgewood Farms, Burlington, Wis. 440
Dot of Edgemoor, May, 1917; McCanna's Edgewood Farms 200
June Morning, June, 1912; Powers Bros., Owen, Wis. 310
Park's Beauty Bella, March, 1915; John T. Whalley, Portland, Ore. 340
Imp. Dixie of Sarnia, March, 1913; Geo. F. Mattes 215
Lord Yeksa's Kate, March, 1906; Geo. K. Hynicks 600
Red Cross Lady, Jan., 1917; R. L. Pope ($25 for expenses and $700 to Red Cross) 700
Polly Winsome of Spring Farm, Dec., 1914; Edgewood Stock Farm 275
Glenwood's Hazel, June, 1908; F. S. Fox, Waukesha, Wis. 400
Imp. Kerrow's Governor's Fancy, June, 1915; Reuben T. Erickson. 350
Maria's Glenwood, June, 1910; Geo. K. Hynicks 2500
Sue's Fern of Fair View, March, 1915; Reuben T. Erickson 235
Directress of Edgemoor, Jan., 1916; Edgewood Stock Farm 350
Homestead Dora, March, 1910; A. P. Lovejoy 315
Butterwitch of Pomeroy, Dec., 1907 305
Sister Susie of Edgemoor, Oct., 1915; H. J. Bacchus, Kiel, Wis. 350
Imp. McKerrow's Palony of Le Briquiet, March, 1915; Edgewood Stock Farms, Burlington, Wis. 400
Park's Lima Girl, Jan., 1915; A. V. Bean, Vesper, Wis. 230
Olive's Ina, Feb., 1914; Edgewood Stock Farms 225
Imp. Creole of Sarnia, Aug., 1912; F. E. Fox 350
Imp. Flower Girl of Edgemoor, Oct., 1915; Ben Omsrud 355
Imp. Princess Jewel of Edgemoor, July, 1915; R. L. Pope 600
Imp. Governor's Lily, Aug., 1911; Edgewood Stock Farms 220
Sequel's Lily of Cedar Lawn, March, 1917; Edgewood Stock Farms 165
Wern's La Mollie, Aug., 1909; Thos. M. Harney, Galena, Ill. 215
Imp. Sequel's Nellie of McKerrow Farms, Dec., 1915; Edgewood Stock Farms 235
Plymouth Maiden of Broad Ripple, Jan., 1916; John T. Whalley 235
Vroni of Hilly Beach, May, 1912; Geo. McKerrow & Sons, Pewaukee, Wis. 175
Broad Ripple's Clover Blossom, July, 1916; Reuben T. Erickson 185
Baby Gloria, Nov., 1914; R. R. Schwartz, Troy Center, Wis. 125
Imp. Flora Belle of Edgemoor, Jan., 1916; W. A. Mumm 400
Hollyhock's Easter Hale Spot, April, 1914; R. L. Pope 400
Lorraine W., March, 1912; G. L. Gove, Waukesha, Wis. 205
Castello Daisy of Sunny Valley, March, 1916; John T. Whalley 300
Imp. Sunshine of Edgemoor, Dec., 1915; Frank Grimm, Almond, Wis. $205
Imp. Governor of Myrtle Place Second's Francine, Sept., 1914; Jno. T. Whalley 300
Faithful Girlie, Feb., 1912; Geo. D. Love, Waukesha, Wis. 150
Imp. Flower Princess of Edgemoor Feb., 1916; R. P. Dobbs, Lake Crystal, Minn. 300
Park's Rosa Queen, Aug., 1916; Jno. T. Whalley 200
Gipsy Love of Edgemoor, Jan., 1914; F. E. Fox 375
Easter Lily of Edgemoor, April, 1916; Fred Bobson, Hinsdale, Ill. 205
Laurel's Buttercup, April, 1911; A. P. Lovejoy 235
Queen Coraline, April, 1911; Geo. McKerrow & Sons, Pewaukee, Wis. 255
Queen Coraline's Lassie, Aug., 1913; Geo. McKerrow & Sons 150
Molly of Ashbourne, June, 1913; T. M. Harney, Galena, Ill. 195
Princess Mary of Edgemoor, Aug., 1916; R. L. Pope 200

BULLS.

Audacious of Edgemoor, May, 1916; McCanna's Edgewood Farms, Burlington, Wis. 450
Dora's Boy of Sunny Valley, Sept., 1912; R. L. Pope 650
Florham Victor, Nov., 1915; Alex Knudson, Brodhead, Wis. 300
Park Prince, Nov., 1913; Christ Soldner, Rushville, Wis. 260
——— June, 1917; A. W. Fox, Waukesha, Wis. 200

Average per head 287

Owens' Poland Sale.

G. W. Owens, Lawler, Ia., made a good sale of Poland Chinas on October 17th. The weather was very bad, yet an average of $52.75 was made on 40 head, all March and April pigs. It was a great offering. Mr. Owens always has the goods. I Am Baron made a great impression on the crowd sale day. G. H. Burge did the selling. A list of the buys follows:

No. 1, M. G. Arnold, Strawberry Point, Ia., $75; 2, John S. Ehlick, Worthington, Ia., $62.50; 3, P. M. Anderson, Lathrop, Mo., $55; 4, O. K. Ramberg, Calmar, Ia., $65; 5, Ray S. Tilden, Elkader, Ia., $67.50; 6, C. E. Mullen, Waucoma, Ia., $60; 7, Lobert Linn, Clinton, Okla., $115; 8, Lobert Linn, $135; 9, Henry Lewis, Hartford, S. D., $75; 10, Charley Frey, Calmar, Ia., $90; 11, Alfred Magnus, Ridgeway, Ia., $77.50; 12, Louis Zipsie, Lawler, Ia., $70; 27, Nick Rieter, Worthington, Ia., $62.50; 21, Tom Pope, Waucoma, $57.50; 14, E. W. Hendricks, Hazel Green, Wis., $50; 18, John Hosch, Cascade, Ia., $47.50; 17, L. G. Smirl, Hawkeye, Ia., $45; 20, John Hosch, $47.50; 28, I. W. Wilson, Fredericksburg, $45; 29, L. G Smirl, Hawkeye, Ia., $45; 31, Nick Reiter, Worthington, Ia., $42.50; 34, C. E. Troy, Fredericksburg, Ia., $40; 33, John Zipsie, Fredericksburg, Ia., $37.50; 39, C. A. Laury, Fredericksburg, Ia., $42.50; 40, John Hosch, $42.50; 37, Will Corrigan, Fredericksburg, Ia., $37.50; 38, O. K. Ramberg, $37.50; 26, A. J. Harman, Lawler, Ia., $37.50; 25, Henry Burlmester, Sumner, Ia., $47.50; 24, W. H. Nieman, Fredericksburg, Ia., $42.50; 32, F. W. Maure, Fredericksburg, Ia., $37.50; 35, O. K. Ramberg, Calmar, Ia., $37.50.

Cain's Duroc Jersey Sale.

The result of the J. J. Cain Duroc sale at Skyberg, Minn., was very satisfactory. This was Mr. Cain's first sale, but since he sold Giant Invincible for $2,500 the demand for the get of this great boar has been keen. Many of the pigs in the sale were of April farrow. The breeders were there to pay the price, especially for Giant In-

(Continued on page 27.)

Cleveland Tractor

Prepare *Now* for Bigger Crops Next Spring

Forget the old routine. Adopt improved methods. That's the only way to solve your labor problems and boost production in 1918.

Munition plants and factories in general are working at top speed. They have steadily drained farm labor from the fields. Now the draft has taken many more men.

You must cut down on labor requirements. That is exactly what the Cleveland Tractor, the country over, is helping wide-awake farmers to do.

This wonderful little machine will do your work *better, faster, and at much less cost* than you can possibly do it with horses and men.

Hauling two 14-inch bottoms, it plows 3½ miles an hour—8 to 10 acres a day. That is more than you can do with three good 3-horse teams and 3 farm hands. And at this high speed the Cleveland Tractor turns over the prettiest job of plowing you ever saw.

Figure up the saving—not only in labor—but in time and good, hard cash.

In addition, the Cleveland enables you to plow when you need it and where you need it. Because it *crawls on its own tracks*, it can go over almost any soil at any time. That is something you can't do with horses and men. *Think of the extra yield that means.*

Moreover, the Cleveland does not pack your seedbed. It is light — only 2750 pounds—and has 600 square inches of continuous traction surface. No other tractor built exerts so small a pressure.

The Cleveland gives you 20 h. p. at the pulley and 12 h. p. at the bar — economical, dependable power to do your hauling and stationary engine work.

Rollin H. White builds the Cleveland Tractor with all the scrupulous care he put into the manufacture of motor trucks. He uses only the best materials—only the finest motor truck parts and gears. He has protected all gears with dirtproof, dustproof casings.

He has so designed the Cleveland Tractor that it *steers by the power of its engine*. Just a light turn of the wheel and the motor does the rest. Anyone can drive it. It will actually *turn in a 12-foot circle*—less than it takes to turn a team.

These are real advantages—too big and too important to be overlooked. There are others just as big. Combined, they make the Cleveland the biggest labor-saving, time-saving, money-making implement introduced into modern farming.

Prepare now for bigger, better crops next spring. Decide now to make the Cleveland earn money for you, as it is doing for hundreds of others.

We are so crowded with orders that we cannot promise delivery of new orders before January 1st. So it is necessary that you order now for delivery early in 1918.

Write to us today for full particulars and name of the nearest Cleveland dealer. Use the coupon or address Dept. AJ.

Handling the Soy Bean Crop.

Rock County, Wisconsin, Farmers Gave a Great Deal of Attention to This Crop the Past Season.

WISCONSIN farmers are beginning to give the soy bean a try as a hay and forage crop for dairy cows and hogs. Its adaptability to almost all soil conditions and its satisfactory growth, even on wet soil, gives it every right to be considered a field crop.

L. S. Markham, county agent for Rock county, for this reason tried to emphasize the usefulness of the soy bean as a field crop during the silo meeting held in the county last spring.

Quite a number of dairymen tried out soy beans in various ways as a result of the interest stirred up during these spring meetings. The results of their trials have, in nearly all cases, been satisfactory, though in some instances frost killed the corn crop before it was fully matured.

A. S. Stauffer, of Beloit, raises grade and pure-bred Guernseys. He put in four acres of soy beans this season, sowing two acres in rows twenty-four inches apart and two acres drilled in for a hay crop. In both cases the seed was sown by a drill, but where the beans were sown in rows only every fourth hole of the drill was permitted to remain open, all the others being closed. Seeding in rows gave Mr. Stauffer an opportunity to cultivate the beans. He went over the field four times with the cultivator, stirring the soil and clearing out the weeds. The beans sowed in rows were harvested for seed and yielded between twenty and twenty-five bushels per acre in seed.

The two acres sown as a hay crop had no opportunity to be cultivated and grew not nearly as rapidly, nor did they yield as heavily as the cultivated acres. However, approximately a ton of vines and pods per acre were put up as hay.

The feeding value of the soy bean compares favorably with that of alfalfa and Mr. Stauffer finds his cows eating the soy bean hay quite as readily as the alfalfa. They clean up all of the stems that are not too hard and woody. When hay is cut at the right time, when the pods are well formed, the stems will not become too woody and the percentage of leaves lost in harvesting will be very small.

J. A. Craig, of Janesville, has always favored hogging down corn and this season sowed beans in portions of his field at the rate of two-thirds corn and one-third beans. As the corn was frosted, however, unusually early in the season, he put the beans and the corn into the silo to prevent loss of the crop.

J. H. Scofield, of Edgerton, and W. A. Dean, of Avalon, are two other dairy farmers who have planted soy beans and corn, but put the crop into the silo this year on account of the frost. Mr. Dean instead of planting the soy beans at the same time as the corn let the corn have a good start and then planted by hand planter.

Charles Boynton, of Avalon, has a system of harvesting his soy bean and corn crop with sheep and hogs. He allows the sheep to go into the field first and harvest the entire crop of soy beans and following this the hogs get their chance and finish up the corn. Incidentally Mr. Boynton is the only man in that section who is fortunate in having mature corn this year, as his fields were not affected by the frost to any appreciable extent. The sheep on the Boynton farm are next in importance to the splendid herd of Short-horns. The sheep are bought in the fall and turned into the field about October 1st. The ewes in the flock are bred at this time and will lamb in February. By July ewes and lambs will be ready for the market and they are sold, to be replaced next fall by another flock. The sheep do exceptionally well on the soy beans.

The results in Rock county with soy beans, while not extraordinary in any way, have at least proved that the question is well worth looking into. Dairymen and sheepmen will find soy beans an admirable crop to grow in the rotation, for it is a good yielder and brings a good return either in feed for live stock or when sold as seed.

SOWN BY DRILL AND NOT CULTIVATED—ABOUT 1,800 POUNDS TO THE ACRE. SOY BEANS ON A. S. STAUFFER FARM ROCK COUNTY, WIS.

SOY BEANS SOWN IN ROWS ABOUT 24 INCHES APART. CULTIVATED FOR SEED. YIELD 20 TO 25 BUSHELS TO THE ACRE. A. C. STAUFFER FARM, ROCK COUNTY, WIS.

Value of the "Plant Doctor"

In an address before the Wisconsin Teachers' Association meeting at Milwaukee, Wisconsin, November 1st, Dr. L. R. Jones, of the Wisconsin College of Agriculture, gave some ideas about the pathologist. He said that 10 per cent of our food crops were killed by disease, blight, rusts, smuts, scabs and mildew. This year blight is reported to have taken one-third of the potato crop and prices are going up accordingly. All this means that plants are subject to epidemic of disease, just as our animals and as men, and the farmer and orchardist after growing his crop may be helpless to save it without the aid of the plant doctor.

The speaker illustrated the work that is done in Wisconsin, under the leadership of the college of agriculture, to prevent these losses in food crops. Examples were cited where spraying apples near Oshkosh reduced the scabby apples from over 90 per cent on unsprayed to less than 10 per cent on the sprayed trees.

The cherry leaf spot defoliates the trees so badly that in three years they may die. Spraying with either Bordeaux or lime-sulphur mixture has saved the splendid Door county cherries and it has also been shown that through sanitation by plowing under the fallen leaves checks the recurrence of the disease. Apple rust is another disease of Wisconsin orchards,

which, curiously enough, starts first on the native red cedar. To save the young orchards, especially of the Wealthy variety in the southern and western river valley regions of the state, it is necessary to exterminate the neighboring red cedars.

Seed disinfection, using formaldehyde solution, which has proven so successful for preventing oat smut, is now applied to barley not only for smut, but for certain leaf blights which are also seed-borne diseases and are reducing the stand in sections of southern Wisconsin by at least 10 per cent. The increasing importance of rye as a flour crop has demanded especial attention to this. Rye suffers from two diseases, smut and ergot. A process was perfected this last summer for immersion first in formaldehyde, then in 20 per cent salt solution whereby both of these infections are removed from the seed grain. Milling grain may also be treated with the brine if necessary to clean it from ergot.

A modification of the disinfection methods has been required in the case of onion smut. In onion culture the grower using high priced especially prepared land wishes to grow onions continuously year after year, but may be prevented because the smut germs from one crop live over in the soil to infect the seedlings of the next. This has been prevented by applying the formaldehyde solution through a drip attachment which wets the seed and soil in the furrow at planting time. In this way by a total investment of $5 per acre one Racine grower increased the value of his crop on an eleven-acre field over $3,000.

The greatest gain in proportion to the effort and investment comes from the use of disease-resisting varieties where these are obtainable, since this obviates the labor and expense of seed treatments or spraying. Such differences frequently occur in nature if one intelligently seeks them out, and by selection or hybridizing the plant breeder may increase and fix them. A conspicuous example of this is Wisconsin Hollander cabbage recently developed and disseminated under Wisconsin Experiment Station leadership. With cabbage growing the crop is handled intensively with only short rotation or none at all. The outcome is an accumulation of soil-borne disease germs, rendering the soil "cabbage sick" in considerable areas of Wisconsin, Illinois, Iowa, Indiana and the eastern states. All remedies failed until it was noted that even on the sickest soils certain individual plants survived. Applying the principle of the "survival of the fittest" these plants were saved for seed, which was again planted on sick soil and the selection repeated. The result is the perfection of resistant Wisconsin strains of cabbage, of which seed is now being grown in quantity to meet the needs of other states as well. The value of this in relation to the food supply is evidenced by the experience of many growers in southeastern Wisconsin during the last two years. Thus where common cabbage varieties on this sick soil may be yielding from one to three tons per acre, the selected strains are yielding from seven to nearly or quite twenty tons per acre. A ten-fold increase in yield is frequent in adjacent rows of the resistant as compared with common strains. This illustrates disease resistance as the most important line for future effort in plant disease control. The possibilities of such gain are beyond estimate.

Potato Growers' Program.

The Wisconsin Potato Growers' Association's sixth annual convention and show will be held in the university live stock pavilion at Madison, Wisconsin, November 19th to 24th. On Tuesday evening, November 20th, an address of welcome will be delivered by Hon. Geo. Sayle, mayor of Madison, and response by J. W. Hicks, president of the Wisconsin Potato Growers' Association. An address will also be delivered on standard American potatoes (illustrated) by Wm. Stuart, secretary of the Potato Association of America.

The subject for Wednesday forenoon, November 21st, is "Wisconsin Seed Potato Trade." This will include a discussion by eastern and western secretaries of associations and managers of potato warehouses and shipping associations. Potato disease control will be discussed by Dr. H. A. Edson, of the United States Department of Agriculture, and Dr. L. R. Jones, of the Wisconsin College of Agriculture. Field reports will be given by R. E. Vaughan, of the Wisconsin College of Agriculture.

On Wednesday afternoon, November 21st, Magnus Swenson, food administrator for Wisconsin and chairman of the state council of defense, will speak. He will be followed by E. P. Miller, of Chicago, who will speak as a member of the United States Food Administration. Miss A. L. Marlatt will speak as a member of the Wisconsin Food Administration.

Wednesday evening, November 21st, there will be a special musical program and an address by Hon. Carl Vrooman, assistant secretary of the United States Department of Agriculture.

The recent proposed regulations for grading potatoes will be defined by C. T. More, of the bureau of markets, and their relation to the Wisconsin situation will be discussed by P. N. Peterson, secretary of the Wisconsin Potato Growers' Association. The shippers' problems will be discussed by E. F. McPike, of the Illinois Central Railroad.

E. S. Brigham, agricultural commissioner for the state of Vermont, will speak Thursday afternoon, November 22d, and in addition there will be addresses by G. D. Jones, Wausau, Wisconsin, and T. J. Newbill, who is interested in girls' and boys' club work under the United States Department of Agriculture.

R. H. Aishton, president of the Chicago & North-Western Railroad, will speak Thursday evening, November 22d.

The association business meeting will be held Friday morning, November 23d. Following this session Dr. H. C. Gore, of Washington, will speak. The potato judges' report will be made by C. L. Fitch, of Iowa, and C. W. Waid, of Michigan.

The closing session of the convention will be Friday evening, November 23d, and this will be devoted to potato club work which is to be carried on under the direction of T. L. Bewick, of Madison. The speakers will be Prof. T. J. Newbill, of Washington, and W. J. Lindeman, of the Michigan Agricultural College.

Your Tractor Must Have These Features

If you have considered buying a tractor you have decided that it must be a common sense machine—a tractor which is not an experiment but a proven success.

It must be the standardized, four-wheel, three-point suspension type, and be powered by a standard four-cylinder motor, which has proved to be the most successful tractor motor. The

Kerosene **TURNER Simplicity** Gasoline

is such a tractor. The special four-cylinder Waukesha Tractor Motor gives ample power for deep plowing or heavy belt work, yet will do the small jobs economically.

It has heavy duty Hyatt Roller Bearings—all working parts enclosed and run in oil—simple control—low center of gravity—short turn, and no side draft.

The Turner is light, yet has great strength—the ideal tractor for all 'round work on the general farm.

Write for prices and a full description of tractor.

Well Known Sheep Man Dead.

Arthur Broughton, Wisconsin Stockman, Resident at Hickory Dale Farm for 60 Years, Died Tuesday, October 30th.

ARTHUR BROUGHTON, of Albany, Green county, Wisconsin, died October 30th on the same farm, known as Hickory Dale Farm, where he was born May 7, 1858. His father was of Scotch ancestry, a graduate of Williams College, and moved to Wisconsin in 1842, where he lived with the exception of two years, which he spent in the West. Hickory Dale, from its beginning to the present time, has been very largely devoted to the production of live stock, and particularly of sheep. Beginning in 1855 Mr. Broughton's father raised Merinos until 1881. At that time he added another breed to the flock, which in 1883 numbered 700. Both Merinos and Shropshires were kept upon the farm until 1891, when changing conditions induced Arthur Broughton, who then had charge of the place, to dispose of all of his fine-wool sheep and develop only the Shropshire breed. From that time to the present, Mr. Broughton has endeavored to develop his flock, which is known throughout the Middle West for its excellence, by the purchase of only superior rams. Many of these have been imported from England, having been chosen from the flocks owned by Minton, Mansell and Tanner, three of Britain's greatest flockmasters. Five years ago, or in 1908, Mr. Broughton took his son in the partnership with him, and the firm is now operating several farms on the edge of Green and Rock counties.

ARTHUR BROUGHTON, ALBANY, WIS., PROMIENT STOCKMAN WHO DIED OCTOBER 30TH.

Mr. Broughton had developed many prize-winning animals which won in keen competition at fairs and expositions. Mr. Broughton was a charter member of the Wisconsin Sheep Breeders' Association, and was its president for several years. He had been president of the Wisconsin Live Stock Breeders' Association and had been identified with important agricultural activities in Rock and Green counties, and also in connection with the Wisconsin College of Agriculture. In 1893 Mr. Broughton became acquainted with Dean Henry at a fair held at Camp Randall, and ever since that time Mr. Broughton had been a strong supporter of the college of agriculture.

For his conspicuous success and inspiring example as a Wisconsin farmer, the University of Wisconsin selected Mr. Broughton for honorary recognition. It was a selection which everyone felt was well merited.

The Midway cheese factory near Almena, Barron county, paid 77 cents per pound for butter fat for September. It was reported also that the Twin Town cheese factory, also in Barron county, paid 77 cents for September butter fat and that the Crescent cheese factory in the sam county paid 78 cents. For the month of September the Hillsdale cheese factory paid 60 cents per pound for butter fat and had forty-seven patrons who received more than $30 cash. There were twenty-three patrons who received more than $100 cash for their butter fat for the month of September.

UPPER WISCONSIN

Good Year in Marinette County.

To the Editor:—The farmers in this locality, all things considered, have never had a better year than the year 1917. Marinette county had less damage by frosts to corn than any other county in Upper Wisconsin. The frost damage, shown by reports sent out from the commissioner of agriculture at Madison, as affecting the corn was undoubtedly about correct, but, of course, the figures do not indicate the true conditions. In a county like Marinette where a great deal of new land is being farmed there is always a considerable amount of corn put in late for whatever feed it will make without any hope of it maturing to make hard grain. This young corn is, of course, always hit first when frost comes and a large percentage of frost damage to corn is accounted for in this way. Undoubtedly this is true to a large extent in many Upper Wisconsin counties. Furthermore, Upper Wisconsin raises its corn chiefly for silage and fodder. Frost damage does not mean that the corn will fail to make fairly good feed. The state map showing that Marinette county has 22 per cent injured corn (or had that about October 1st) I think is about correct. That is about the average percentage of corn used by Marinette county farmers for feeding beef cattle, hogs, etc., inclusive of matured grain used for seed. The matter of seed corn is gradually becoming very important in this section and a considerable amount of this 22 per cent of the corn crop represents pure-bred seed corn. This seed corn brings a premium above corn prices and has been the source of very good profits to several of our Marinette county farmers.

This county now has over 650 silos, 150 of these having been erected during the present year. This gives a fair idea of the amount of corn which goes into silos.

There was very little damage done to the potato crop from frost in this part of the state. Marinette has the greatest potato crop in five years and when prices are considered, I think it will turn out to be the most valuable crop of potatoes ever raised in the history of the county.

C. R. Gorman, one of our larger potato raisers, has harvested 10,000 bushels of Triumphs from sixty-five acres. In today's Chicago market these potatoes are worth about $1.25 per bushel, or $12,500. This means about $190 gross per acre. We don't think this is very bad for land that has been under the plow only a few years.

Regarding small grains, the yield in Upper Eastern Wisconsin was somewhat under normal. We only had three or four days of very hot weather in the county and that came just when the grain was filling and affected the yield. Nevertheless the yield was a fair one and with the present high prices means very good profit. When the many special crops, such as sugar beets, white navy beans, peas, strawberries, etc., are taken into consideration, it cannot be said too emphatically that Upper Eastern Wisconsin had a season this year of which it is proud.

I have left entirely out of consideration our live stock industry, which is mainly dairying. In 1913 state figures credited us with only five cheese factories and creameries. We really had more at that time, but I think the correct number was only seven. Marinette county now has thirty-two cheese factories and creameries—a gain of twenty-five in four years. Nothing that I could say could give you a good idea of how fast our dairy industry has been growing than this statement. It stands to reason that if the farmers here were not making money on the dairy cow they would not continue to increase their herds. We have thriving cheese factories in such new settlements as Middle Inlet, Wausaukee, Athelstane, Wagner, etc. Only a few years ago a dairy cow was a stranger to these parts of our county.

Referring again for a moment to frost damage, a Mr. Bates, of northern Illinois, was here recently looking up a location in our county, and he stated that the best corn he had seen in Wisconsin was in this section. He said the damage to corn in northern Illinois, where corn is relied upon as a principal crop, was more extensive for the most part than it was in Marinette county. Here we do not rely on corn as our principal crop, although it is very important for silage and fodder in connection with our dairy industry.

Such figures as we can obtain on our potato crop show that we will have a yield this year of well up to 875,000 bushels in Marinette county. No small part of these were raised on small garden plots in the cities of Marinette and Peshtigo and in the villages of the county as well as on small truck farms adjoining the cities and towns. Under present prices this means about one million dollars in cash for the potatoes that will be sold, not to say anything about the potatoes raised for home consumption.

Twelve years ago you could not possibly have picked up one entire carload of potatoes in any one district in Marinette county for shipment. Today something like 120 carloads are shipped annually from what we call "Our Crivitz District." This district includes the settlements of Loomis and the territory around Crivitz.

I have entirely neglected to say anything about our hay crop. Clover cut from two to four tons per acre in two cuttings. Timothy yielded from one and one-half to two and one-half tons per acre. Alfalfa turned out fairly good, cuttings from three to four and one-half tons in three cuttings. Pastures were excellent throughout the season and are still fine.

Many of our farmers took on a few sheep last fall when they saw prices on mutton and wool going up and they had some very profitable lambs to turn off this fall. The number is not large as yet, but many farmers are stocking up with sheep this fall.

Twelve sales of unimproved farms have been made at prices of from $80 to $140 per acre. In some cases these farms are the products of wild land sold at $18 per acre five years ago. These farms which two or three years ago we considered worth from $40 to $70 per acre have just doubled in three years. Howard I. Wood.

Marinette Co., Wisconsin.

Polk County Farmers' Clubs.

To the Editor:—The Polk County Fair Association offered a prize of $100 to induce the farmers' clubs of the county to make exhibits at the fair that was held here September 11th to 16th. The Federation of Polk County Clubs appointed a committee to take the matter up with the result that four farmers' clubs and two women's clubs made splendid exhibits.

A schedule patterned after the one used for the county exhibits at the state fair was prepared for the farmers' clubs and one for the women's clubs. It was decided in the beginning to divide the prize money equally, $50 for the men's clubs and $50 for the women's.

In addition to the prize offered by the fair association, the federation of clubs offered tasty banners for first, second and third place. No small amount of enthusiasm was shown by those taking part in the exhibits and a great deal of friendly rivalry was developed between the different clubs.

The Blue Bird Farmers' Club, of Deer Park, took first prize, leading the Interstate Park Club, of St. Croix Falls, by 40 points, which took second prize. The Trout Brook Prairie Club took third place.

The Polk County Women's Club took first in the woman's department, and the Trout Brook Prairie took second.

All who took part were well satisfied and went home determined to make a greater effort next year and several who did not try this year decided to do so next. P. F. Amery, President of the Polk County Federation of Farmers' Clubs.

This coat made to order from hides sent us for tanning.

WE TAN HIDES
AND SAVE YOU 50%
Have your hides made up into useful and valuable articles—coats, fur sets, gloves, mittens, caps, robes or rugs. Anything you want can be made to your order and at a saving of 50% or more. Food Value of Dairy Products.

Farmers Cannot Afford to Sell Skim Milk off the Farm—By E. H. Farrington, of the Wisconsin Experiment Station.

THE important part which milk and other dairy products take in the food supply of the nation is not widely known or fully appreciated. Few people realize that about one-sixth of our food supply is milk and its products or that the butter we eat is worth nearly as much and sometimes more than the bread on which it is spread.

The 1916 wheat crop of 640,000,000 bushels was estimated to be worth $1,025,000,000, while the dairy products were valued at $830,000,000. A comparison has also been made with the gold mined in the United States for a year, and this was found to be worth $73,000,000 or $20,000,000 less than the value of the dairy products made in one state (Wisconsin) which was placed at $73,000,000 that year.

The rate at which milk is consumed is illustrated by the statement that in Wisconsin, which has about 2,000 cheese factories and 1,000 creameries, there is made 206,000,000 pounds of cheese and 131,000,000 pounds of butter in a year. If these factories run eight hours per day for 360 days the cheese is made at the rate of 570,000 pounds per day or 1,200 pounds per minute and the butter, which amounts to 360,000 pounds per day is made at the rate of 750 pounds per minute. This rate of manufacture is not fast enough, however, to keep up with the demand, as the census shows that during twenty years there has been an increase in population of 46.7 per cent, while during the same time the increase in butter production was only 34.4 per cent, while that of cheese was 24.9 per cent.

A great deal has been said and written about the tendency of our population to move from farms to cities. This is a large question which need not be discussed here, but the two following statements furnish a little evidence that may be of interest at this time.

A recent official statement of the Chicago Butter and Egg Board informs us that the September shortage in butter was 12,000,000 pounds, as compared with September of last year, and further that, "in many sections 25 per cent of the visible supply of milk cows has been sold to the packers and killed for beef."

I do not know the basis for this alarming statement, but at the time I read it I called up the man at our college who keeps posted on the work of the cow-testing associations in Wisconsin. He sent me the following information:

A summary of the reports from 47 cow testers who visit monthly 1,410 dairyman having 23,500 cows on test, shows the following:

Are there more heifer calves being sold for veal than formerly? All of the testers reported "No."

Are there any good heifer calves from pure-bred bulls being sold for veal? Thirty-nine report "No." Four report "Yes" and four report "Few."

Are any of your members going out of the dairy business because of feed prices and labor shortage? How many? Forty-one report "No," the balance reporting that six members had gone out of business and two members were cutting size of herd.

Whatever the situation may be in regard to selling cows to the packers, there is no doubt about its being the duty of every creamery operator in the country to do everything he can to encourage his farmer patrons to produce every ounce of milk possible. Selling dairy cows to the butcher at the present time is destroying one of the most valuable sources of income the farmer possesses, to say nothing of the duty to his family, his state and his country in doing what he can to contribute to the supply of our much-needed dairy products.

There are many ways in which the creamery operator may present this matter to his patrons. Some of the old, familiar arguments in favor of keeping cows are:

1. That dairying, especially selling cream or butter, increases the fertility of the soil, because, by raising crops and feeding them to the cows the fertilizing constituents of the soil do not leave the farm, as is the case when crops are sold in bulk.

The fertilizing constituents contained in a ton of butter are worth about 50 cents, while each ton of hay, corn, oats and some other crops when sold from the farm remove about $5 worth of fertility.

If the value of a ton of butter (now about $900) is compared with the value of a ton of hay, one will see that the soil of the farm will be much more exhausted and the income received will be much more reduced by selling hay and other crops from the farm than by selling cream and butter.

2. The waste land, such as the rocky hills, the marshes and the timber lots, can be pastured and the vegetation growing on them converted into milk if cows are given an opportunity to utilize these portions of the farm that otherwise would bring in no income.

3. The small cost of transportation of high-priced cream and butter as compared with many of the farm crops is an item of considerable importance to the farmer.

4. The dairy farm can furnish profitable employment for labor throughout the entire year, as the help used for raising crops in the summer may be retained for feeding and caring for the cows during the winter.

5. The steady, cash payments received for cream are certainly appreciated by every farmer, and doubtless this is one of the strongest inducements for the keeping of cows which will convert the feeds raised on the farm into high-priced cash products.

6. The especially high feeding value of skim milk, which at the present time is worth at least $1.00 per hundred pounds for feeding pigs, chickens and calves, is something that should appeal to every farmer who has an interest in his own welfare.

The two pigs shown on this page are photographs taken after these pigs had been fed for 100 days on two different rations. Both pigs were from the same litter and equally thrifty when weaned, each weighing about thirty pounds at that time. During the into the federal service and ceased to exist as a state organization. While federal service, it seemed wise to prowaiting for this transfer from state to 100 days of this feeding trial, one of them received grain and water and the other grain and skim milk in the proportion of three pounds of skim milk to one pound of grain.

At the end of the 100-day period the pig fed grain and skim milk weighed 165 pounds, while the pig fed grain and water weighed fifty-five pounds.

The skim-milk fed pig gained 135 pounds, while the pig fed without skim milk gained only twenty-five pounds.

Feeding experiments have demonstrated in recent years that there is no substitute for skim milk on the farm, and that dairymen cannot afford to sell it at any price if they want to develop normal and profitable calves, pigs and chickens.

Milk stands at the head of the list of human foods. It contains nutrition for infants, invalids and strong men; its different constituents supply the body with material to produce heat, muscle, bone and energy. There are practically no waste products in milk; 94 per cent of the energy it contains is absorbed by the human body. This is a very high figure when compared with other foods, and if this fact was more widely known and appreciated the annual consumption of milk per capita would be much higher than 290 pounds, which is the estimated figure per year at the present time, or about three-fourths of a pint per person per day.

In comparing different foods, specialists usually consider them under the following heads:

1. The amount of energy.
2. The kind of proteins.
3. The mineral constituents.
4. The presence or absence of the two unknown substances, called "vitamens."
5. The presence or absence of certain poisonous or toxic substances.

The energy in food is measured by the heat units or the calories of energy produced when a given quantity is burned.

The proteins have been found to differ in their usefulness as food, while the mineral constituents consist of a certain mixture which the body seems to need in assimilating food and keeping it in a normal healthy condition.

The vitamens are substances which it has been proved are absolutely necessary for the normal growth and development of the young. This has been shown by careful feeding experiments with young animals which were fed continually a ration containing no vitamens. In such cases the animals became stunted and even paralyzed by their diet, although it contained everything the animal needed except these important substances.

The toxic or poisonous substances which some foods contain make it impossible to use them except in very small quantities on account of the accumulation of these poisons in the system.

The selection of foods, therefore, is a matter of great importance and much study has been given to this question. It has been found that neither meat nor any of the single grain foods contain all the above-mentioned requirements in exactly the right amounts, and it is not safe to use any one of them exclusively as a

TWO PIGS FROM SAME LITTER, BOTH FED 100 DAYS.
At the left, pig shown was fed corn and water and weighs 55 pounds. Pig at right fed corn and skim milk and weighs 165 pounds.

Sore Teats—Their Prevention!

Do you know what the calf's tongue does to the teat *when he swallows?* Not one person in ten does. That is one reason why, here and there, a man is loath to give up hand milking.

Notice when *you* swallow—the back of your tongue strikes the roof of your mouth first and works forward till the tip touches. It's the same with the calf—in doing so his tongue relieves the teat of its *congestion* by massaging it from *tip to udder.* If this were not necessary, there would be some excuse for the milkers that just pull, pull, pull—or for those that massage in the *wrong* direction and those that massage in the right direction but in a *rough brutal* manner. Even hand milkers cannot relax and massage the teat—a fact which accounts for the usual increase in the yield of the herd when Empire Milkers are installed.

Examine the Empire Teat Cup. Notice how the gentle massaging is accomplished—more *gently* and *uniformly* than even that of the calf.

The facts are getting around: The wide and growing sale of the Empire Milker; the stories of success after success in dairies all over the country; its prestige among the men whose opinion carry weight.

Our factory is crowded to the limit. We advise prompt action. Go to your dealer without delay and tell him to place your order as early as possible. In some localities we have not appointed an Empire agent; our requirements are high and not every kind of dealer is permitted to represent the Empire Line—if there is none near you write for the Empire Profit and Prize Book and Catalog No. 56 and we will see that you are taken care of.

food, but trials have shown that milk satisfies all the needs of a perfect food and furnishes the most healthy nourishment and normal development of the body at the least cost.

Economy in buying foods is a matter of great importance and requires a knowledge of their composition as well as of their digestibility. The accompanying table illustrates the comparative value of a few foods based on their energy equivalents.

WHICH SHALL WE BUY?
Each of These Foods in the Quantity Shown, Has the Energy Value of One Quart of Milk.

Amt.	Food	*Price	Cost
1 qt.	Milk	9c qt.	9c
3-8 lb.	Rolled oats	7c lb.	2½c
2-5 lb.	Corn meal	7c lb.	3c
3-5 lb.	Bread	12c lb.	7c
2-5 lb.	Beans (dry)	20c lb.	8c
1-5 lb.	Butter	48c lb.	9c
1-3 lb.	Cheese	30c lb.	10c
1 1-3 lb.	Cottage cheese	10c lb.	13c
3 1-5 lb.	Apples	50c pk.	19c
5 2-3 lb.	Cabbage	4c lb.	22c
3-4 lb.	Beef (round)	33c lb.	25c
2-3 lb.	Sirloin steak	37c lb.	25c
1 1-10 lb.	Eggs (8)	40c doz.	27c
5 1-12 lb.	Tomatoes	10c lb.	65c

Shipping Dairy Animals.

Proper care on the part of the breeder in preparing a calf for shipment in order that the calf arrive at its destination without having suffered from lack of feed and water ought to be considered part of the sale price. This preparation for shipment has its beginning with the construction of the crate. The crate should be large enough so that the calf is able to lie down comfortably and enjoy some freedom of movement forward and backward in the crate.

PLENTY OF FEED AND WATER FOR THE TRIP—THIS IS THE WAY MONTE AYRES, HONEY CREEK, WIS., SHIPS HIS BROWN SWISS.

The crate should be strong enough so that its first trip will not be the last, for while it is being made it can just as well be made right.

The picture shows a crate which is built large enough for comfort and strong enough to make dozens of trips. In the front, it will be seen, a burlap sack filled with hay has been tied to the crate from which the calf can be fed along the route. On the top of the crate a bucket has been tied which will make it possible for the railroad men to water the calf at feeding time. The calf is sure of drinking from a clean bucket and of being watered when a bucket is thus sent along. Many a time those responsible for feeding the calf will not bother to look for something for the calf to drink out of unless they find the pail attached.

These little precautions will make a world of difference in the appearance of the calf upon its arrival. Instead of a starved, hungry animal the buyer gets a calf in good condition and he will feel just as enthusiastic over his purchase as he did at the time of viewing it or corresponding about it. The animal will look more like its picture and the buyer be better satisfied when these little accommodations are provided by the shipper.

Where only short distances are involved this will not be necessary, of course. However, all transfers from one railroad to another at junction points or cities require time and frequently delay the arrival of the calf by days.

The Producer's Point of View

To the Editor:—The rapid increase in cost of both feed and farm labor during the past year has necessarily increased the cost of producing milk. Very few farmers, however, know how to determine what milk costs them, and the question is so complicated that even experts will have great difficulty in calculating the cost for the farmers.

Some of the studies already made of this question suggest that feed is approximately one-half and labor one-fourth the total cost of keeping a cow.

Another rule that may be useful in calculations of this kind is the suggestion that one pound of grain mixture should be fed for each four pounds of milk.

Other good suggestions have been made, but the work which has been done indicates that each cow owner must necessarily calculate the cost of producing milk for his own farm.

General averages will not apply to every farm, because each one of the items entering into the cost of producing milk may have a different value at the different farms.

It is also a well-known fact that the same herd of cows may produce more milk at less cost one year than another, and this may be largely due to the kind of treatment the cows receive each year.

It has been noticed that good dairy cows fall short of what they might produce whenever they are not kindly treated, and when they are not protected from cold rains and stormy weather.

The manager of one of the largest city milk distributing firms in Chicago informs me that his firm finds it necessary to provide a surplus of milk because in certain localities where the cows are not well protected there is a great reduction in the amount of milk received from that locality whenever a storm or long spell of bad weather occurs.

Some owners of cows also fail to realize the economy of sufficient feed, and cut down the rations of their cows, thinking that in this way they are reducing the cost of the milk the cows produce.

In a general way the farms producing milk may be divided into three classes:

First, the so-called "general farm" where the cows are only a part of the farm activities. The products sold may be hay, grain, potatoes, pork, poultry, fruit and nearly all the farm crops. The cows furnish only a small part of the income from the farm. These farms undoubtedly produce a very large share of our milk supply.

Second, the "special dairy farm." In this case the cows are the most important part of the farm work. They are carefully selected. Records of the milk production are kept, and the entire attention of the farm owner is given to the raising of crops to feed the cows and to the supplying of conditions best suited for producing milk economically.

Third, the "intensive milk-producing farm." On farms of this kind the owner is trying to develop record-breaking cows and no expense is spared to obtain the reputation of owning cows that are leaders in the annual records of the dairy world.

When one considers the fact that our milk is produced on these three types of farms, it will be readily understood how complicated is the question of calculating the costs of producing milk.

A very important item, however, in milk production is the difference in the capacity of cows. This is illustrated by the following figures, which not only point out the facts that cows producing the least milk nearly always produce the most expensive milk, but the figures also furnish an outline for discussing this question with our creamery patrons.

TABLE I—A RECORD OF THREE TYPES OF COWS.
(Try substituting your own figures.)

Cow No.	1	2	3	Your cow
Milk per year pounds	3000	6000	10000	—
Cost of cow	$ 50	$100	$200	—
Value after 5 years	40	40	40	—
Expense Items				
Depreciation per year	$ 2	$ 12	$ 32	—
Labor	30	45	50	—
Feed	50	75	125	—
Taxes, interest, etc.	20	25	30	—
Sum of expense items	$102	$157	$237	—
Receipts (except milk)				
Calf	$ 10	$ 15	$ 20	—
Manure	10	15	20	—
Sum of calf and manure	20	30	40	—
Net cost of milk	$ 82	$125	$197	—
Milk per 100 pounds	2.73	2.11	1.97	—
Milk per quart	.055	.042	.039	—
Butter per lb.	.58	.42	.39	—

(Assuming four pounds butter and eighty-five pounds skim milk at 50 cents per 100 pounds.)

I have no doubt but someone may object to every figure in this table, and the criticism may be well defended, as it is practically impossible to obtain an average figure which will represent the cost of milk on all farms. This is a problem which each farmer must figure for himself.

There is another question which is of great interest to the creamery man just now, and that is the market price of butter as compared with the market price of milk and of cheese.

This is something on which he can figure the cost of making with considerable accuracy, and when he knows the price at which he can sell the butter, it is an easy matter to determine how much he can afford to pay for the milk.

TABLE II—A COMPARISON OF FACTORY PRICES FOR MILK, BUTTER AND CHEESE.

Milk	Butter		Cheese	
When 100 pounds milk (3.5 per cent) sells for	With 100 lbs. skim milk at $1.00 Should sell for	$0.50 Should sell for	With 100 lbs. whey at $0.50 Should sell for	$0.25 Should sell for
$1.60	$0.21	$0.32	$0.14	$0.16
1.80	.26	.37	.16	.18
2.00	.31	.42	.18	.21
2.20	.36	.47	.21	.23
2.60	.46	.57	.25	.27
3.00	.56	.67	.29	.31
3.20	.61	.72	.31	.33
3.40	.66	.77	.33	.36
3.60	.71	.82	.35	.38
4.00	.81	.92	.39	.43

100 pounds of 3.5 per cent milk will yield—

4.0 pounds of butter and 87 pounds skim milk or 9.5 pounds of cheese and 67 pounds whey.

Cost of making (per pound) butter 3 cents, cheese 2 cents.

Wisconsin Dairy School.

The Creamery Operator's Opportunity.

To the Editor:—Most of our creameries in Wisconsin are so located that they happen to be one of the centers of information for the community. The creamery operator, therefore, has a great opportunity to influence the opinion of the locality in which he lives.

I hope every one of them is now improving this opportunity, for if there ever was a time when a man should be serious minded that time is here now. We must make sacrifices for the good of the entire neighborhood, community and country. We must control our selfishness more than ever before.

The time has passed when we can leave everything to our officers and office holders. Everyone who breathes the air of this free land of ours must think of his neighbor as well as of

The Great Milk Making Feed

KRAUSE Dairy Feed has made a top notch record as a milk producer. It is recognized by expert dairymen everywhere as a feed of the highest grade, on which they can always depend for increased milk production and healthy cows. It is a money-maker because it takes the place of high priced, home grown grains—saves time and labor of mixing—provides a better ration than any other combination and one which produces big and certain results.

Krause Dairy Feed

Krause Dairy Feed is made under a formula which has been approved by experts of two leading agricultural colleges. It contains distillers' grains, gluten feed, cotton seed meal, wheat bran, malt sprouts, wheat middlings, brewers' grains, hominy feed, linseed meal and a fraction of 1% of salt.

A Scientifically Balanced Ration

Each of the ingredients in Krause Dairy Feed has distinct and specific value. They are combined in such proportions as to produce a scientifically balanced ration which possesses maximum food and milk-making value—will keep your cows in perfect condition and produce a big milk yield without forcing. Your herd will relish Krause Dairy Feed and respond to it immediately.

Feed "Krause" this Winter

Sell your high priced grains and make Krause Dairy Feed your standby for fall and winter feeding. Fed alone or with any home grown stuff that does not bring a high market price, it is always a money maker. Compare the cost and results with any lower grade mixture and you will find you are saving money and making money.

himself, and he must do something for the general good.

Specific suggestions as to what each one of us may do need not necessarily come from others, but by keeping the thought of helpfulness in mind many opportunities to do something for the good of the cause will come to us.

There never was a time in our history when team work was so important as now. Each one of us must find a place somewhere in the line.

Our present prosperity and national comfort are the result of the unrestrained development of the good there is in freedom of action and in a common effort for the good of all and not for any one class in society. A spirit of helpfulness in everyday matters makes us all happy, strong and prosperous, and we should remember also that there is nothing too good for our soldiers. The sacrifice we may make at home must be great to even compare with what they have done and will do for us in the future.

One phase of the situation which confronts us all I think may be illustrated by the following story.

Once upon a time the members of a large and prosperous family decided that they would pack everything they had into a boat and seek a home on the opposite shore of the swift-running Niagara River. The place where they intended to cross was a few hundred yards above the brink of the falls.

The father and sons were provided with oars, while the mother and girls were given light paddles.

With this equipment and the strong faith they had in each other, they hoped to pull across the dangerous river. They knew that the current was swift and filled with whirlpools and hidden rocks, and that these might wreck the boat and carry the family over the falls to destruction.

After carefully considering the seriousness of the situation, they finally launched their craft and started across the perilous stream.

The boat made good progress; it reached the middle of the stream in safety and there seemed to be good prospects so long as every member of the family did his part that they would reach their destination, and the lives and property of the household would be saved.

It so happened, however, that while in midstream one of the sons, who, like all the other members of the family, owed everything he had to the care and protection given him by the home folks, and who had been grumbling more or less ever since the boat started, suddenly ceased pulling his oar. He refused to continue to help the boys and father in their struggle to save the family, claiming that even in midstream when the dangers were greatest he had a right to stop and discuss the advisability of undertaking the voyage; that he had the right of free speech and even when the boat was slowly drifting nearer the brink of the falls he dared to stop and criticise the decision of the majority of the family. He claimed the right to be heard and to be noticed by everyone regardless of the calamity that might befall the boat and its precious load. He denied the necessity of pulling together until the women and children were safely landed.

By this harangue he had attracted the temporary attention of every member of the family. In this respect he had accomplished his purpose, but what else had he done? I leave you to finish the story.

At the present time we are all in that boat and I hope every one of us will remember his duty to his family and act accordingly.

"All My Grain Goes to Market"

SUCRENE FEEDS

Bring Better Results at Less Cost

Help win the war! Your grain made into bread goes much farther to feed Uncle Sam's army than when made into meat or dairy products—and it brings you better profits.

Sucrene Feeds take the place of nearly all grain feeds. They are composed of materials known to possess high feeding value in protein, fat, carbohydrates, minerals, etc. Tested, proven and positively guaranteed in quality, and cost you less than any good ration you can mix yourself.

Sucrene Dairy Feed the Leader

Stop making milk at a loss. Sucrene Dairy Feed produces more milk at less cost than other feeds. *Here's the proof:*

Thos. Y. Hackett, one of the biggest dairymen in Salem County, N. J., writes: "I can honestly say that Sucrene has made me more money than any feed I ever bought. It produces larger quantities of milk at low cost, to say nothing of keeping the stock in best of health."

Cows enjoy Sucrene Dairy Feed because of the molasses and well-balanced variety of clean, wholesome grain products it contains.

Why use corn worth $50 per ton or more, when you can buy a standard, ready-mixed feed for less money and get better results because it is a scientifically balanced feed of guaranteed uniform quality?

Try Sucrene Dairy Feed. Order a ton from your dealer. If he does not handle it, write us his name and we will see that you are supplied.

Fill out and mail us the coupon today. Check the feeds in which you are interested.

At the Racine County School.

Agricultural School at Rochester Seems to Be in Flourishing Condition Notwithstanding the War Times.

THE Racine County School of Agriculture and Domestic Economy, located at Rochester, Wisconsin, is now in its sixth successful year. The pictures shown herewith give an idea of the ages of the young people who attend this school and also show their interest in live stock. When the school opened on September 24th this fall there was an enrollment of fifty students for the two-year course and, considering the shortage of farm help in southeastern Wisconsin, this is regarded as a very good attendance. It is expected this enrollment will be brought up to eighty the first week in December, when the winter course begins. This county school is trying out something new in the arrangement of courses and the plans are meeting with success. The courses offered include a two-year course in agriculture (eight months each year), a two-year course in domestic economy, one-year course for high school graduates and a two-year winter course in agriculture with fourteen weeks' work each winter.

The progress of this school is watched with considerable interest throughout the state. At one time the county agricultural school was looked upon everywhere with considerable favor. After the first interests in these schools they seem to fall back a little, but gradually they have come into public favor. At a county school, such as we find in Rochester, the entrance requirements for the regular courses is a common school diploma. Mature students are permitted to enter without a diploma if capable of handling the work. These agricultural schools do not compete with high schools, but now offer complete courses for farm boys and girls or others interested in agriculture. A big part of the student's time is spent in laboratory work in the school and on the 128-acre farm in connection with the school. A graduate of the two-year course may secure credit in high schools upon recommendation of the superintendent. The Racine county school faculty does a great deal of extension work throughout the country, such as laying out tile drain systems, judging at fairs and school exhibits, holding farmers' meetings and conducting canning demonstrations. Many talks are give at farmers' meetings. This school is also coöperated in the work of the county council of defense.

An annual event of importance is each February, and at this time lectures and demonstrations are given the three-day course for farmers held by men and women secured from the college of agriculture at Madison. Students at the Racine county school have a splendid advantage to study live stock and there are a number of head of pure-bred animals of the various breeds. The school is equipped with modern cattle and horse barns and has a tractor which is used in the fields and also for silo filling. The lower Fox river runs in front of the school grounds and the village of Rochester, where the school is located, provides a splendid atmosphere for an institution of this kind.

One important feature of the winter's work is the community lecture course. Students of the school are admitted each year at half price. The annual banquet and reunion of students is held each year on commencement day. Prof. E. A. Polley is the present superintendent of the school.

The county agricultural schools in the state are accomplishing a considerable amount of good, even though they are not at present very largely attended. They provide a rallying place for valuable extension work and also field for experimental work. Another great advantage is that there are always two or three well-posted men connected with these county schools, who will take an active part on programs arranged for farmers' meetings all around the county. Many of the young folks, who are developed into good farmers or good farmers' wives, have come from schools of this kind. These schools do not detract from the college of agriculture at Madison, but, on the other hand, should be feeders for the state school as academies are feeders for the universities.

Upper view—1917 graduating class at Racine County Agricultural School, Rochester, Wis. Center view—Judging draft horses at Racine County "Ag." School. Lower view—Pure-bred hogs on the school farm.

The comptroller of the currency has recently estimated the gross income of the United States to be $40,000,000,000. Of these he estimates farm produce and animals to bring a gross return of about $17,000,000,000. This means that farmers receive 42½ per cent of the total income of the country and they should buy, if this estimate is correct, 42½ per cent of the liberty bonds sold, provided they do their full share.

1918 Studebaker Almanac.

SINCE the publication of the first issue back in 1900, the Studebaker almanac has become an institution. Farmers look for it each year now and it is without doubt a most frequently consulted book in thousands upon thousands of farm homes in every part of the country. This year the almanac is mailed direct to the farmer from the South Bend factory, the lists of names being supplied by the Studebaker dealers in various localities.—

Public Auction Sale Pavilions.

Is Practical to Combine Them With a Sunlit Hog House—A Most Convenient Arrangement for Pure-bred Stock Farms.

THE wide popularity of the public auction as a means of disposing of surplus stock renders the question of the right kind of a sale pavilion of live interest to many breeders. The plans we show here are loaned us by the department of farm architecture of the Gordon-Van Tine Company. The economy, convenience and good looks of the plan recommend it.

SOUTH ELEVATION.

The pavilion is thirty-two feet square and ten feet high at the plate. It is designed to be bolted to a light concrete foundation raised twelve inches above grade. It will seat comfortably 300 people—though a good many more can find space if necessary. On sale day the entire floor space of the pavilion is taken up by the ten-foot circular sale ring and the seats. The seats are removable and when not in use may be stored in the loft of the pavilion and the building used for implements or other storage. The floor of the sale ring is of concrete in which openings are left into which the steel or wood posts that support the sale ring fence are put. By this provision the ring fence can be lifted out, rolled up and stored in the loft until again needed. The entire floor of the pavilion could be of concrete, if preferred, or its expense altogether avoided by building only light concrete piers at intervals about the circumference of the sale ring. These piers or footings would be brought up level with the floor grade and the ring fence posts set in them. Some such provision is necessary or the ring fence must be built new for each sale.

FLOOR PLAN.

The pavilion is well lighted by a continuous row of six lights, 8x14 windows on one thirty-two-foot length of the building—much of the other wall space is occupied by similar windows, which are set high in the wall so that the light enters above the heads of those seated inside. There is some glass in the large rolling doors at either end of the building. These doors are for a ten-foot opening. The ceiling height above the sale ring and the seats is eleven feet. There is a loft floor for storing bedding, shipping crates, seats, etc. The inside walls may be ceiled or not, as the builders think best. For winter sales in northern latitudes the inside lining would render the pavilion comfortable in severe weather. Artificial heat can be admitted through an opening in the wall between the sale room and the hog house where the stove or cooker is located. There are two built-up girders used to support the loft in the pavilion—the posts under these girders may be so placed that they do not interfere with the convenient use of the floor space. The long way of the building is east and west.

Combining the pavilion with the sunlit hog house saves lots of work and confusion on sale day. The floor plan shows the manner in which the hogs are gotten in and out of the ring on sale day. By dividing the passage way between the hog house and sale ring by a hurdle, as shown on the plan, a hog can be held in readiness to enter the ring immediately after a sale is made. We are all familiar with the annoyance sometimes caused by the delay in getting a hog in the ring promptly. Such delays are especially trying to the auctioneer and hurt the sale. How much of the hog house need be given up on sale day, to the use of the cataloged herd, depends, of course, on circumstances. As a rule, the time of public sales comes when the hog house is not in use as a farrowing house and available for the accommodation of the sale herd.

EAST ELEVATION.

The farrowing house shown is of popular modern type. A double row of windows in the south roof admit the sun's rays directly on the floor of each pen.

On March 1st, in latitude 42 degrees north, which is that of central Iowa, the sun shines continuously on the pen floors from about 10 a. m. until after 3 p. m. The earliest sunshine is admitted to the row of pens along the south wall through the windows in the side walls. The pens are six feet wide along a center feeding alley and eight feet deep. Ventilation is secured by opening each alternate roof window in the upper row, or a ventilating cupola with a damper may be employed. Each pen is provided with an outside door.

A modern plant of this kind would be a well paying investment on most farms in the corn belt. There is nothing about the buildings that is not practical and usable all the year around and their cost is within reach of anyone owning a herd of good hogs. Perhaps at no time in the last fifty years has the cost of providing the necessary farm buildings cost so small a part of the stock or grain they shelter as at present; measured into products of the farm, building material is low in price.

The Fate of the Unprepared

Among the remarkable events of this war no fact stands out more startlingly than the tragic sacrifice of Russia's unequipped soldiers.

The army has been victimized by intrigue and treachery. Guns were sent to the front without ammunition and ammunition without guns. Supplies were provided that when unpacked proved to be rubbish. Left stranded by communications that broke down under slight pressure the brave Russian troops hurled themselves again and again against foes perfectly prepared.

From the very verge of victory they doggedly fell back fighting with stones and clubs and iron bars, resisting heroically but ineffectively.

No thought can be more abhorrent to Americans than that of our boys ruthlessly slaughtered because of lack of equipment or support which it is the first business of us at home to supply.

Our Government, never before so powerful, is working prodigiously in the preparation of armies and means of warfare. Throughout the nation there is a unity of purpose that is piling on the altar of liberty every personal ambition and corporate gain.

Mines, factories, farms, shipyards, the counting houses and shops of every industry are laboring day and night to supply the sinews of war.

The Bell System is co-operating to mobilize production, transportation and communication, and is using its every energy to speed up American defense.

Kindergarten Activities at Home.

The pleasures and benefits of kindergarten training are established facts, and children so situated that they cannot take advantage of this training are the losers thereby unless some systematic plan is worked out in the home. Many mothers of little children have found it practicable to do this, and have successfully carried on many of the activities of the kindergarten in their homes. One such mother, Mrs. Alice Wingate Frary, who was formerly a kindergarten teacher, gives some valuable hints concerning this home work. She says:

Why shouldn't children sing morning greetings to father and mother as well as to teacher? Even two year olds that I know can sing them and delight in doing so. The good morning songs to various members of the family, to the new day, to sun or clouds, sung while dressing, do much to create a sunny morning atmosphere. There are songs to accompany many of the home duties, besides a wealth of nature songs. At bedtime, the devotional spirit of the evening prayer may be enhanced by the singing of a child's hymn. Songs such as these can be found in "Games and Music of Froebel's Mother Play" and in other kindergarten song books. Any good library would have some of these, or it would be possible to buy copies through a book store.

A Kindegarten calendar may easily be made at home. For this purpose a sheet of white cardboard is ruled off into a sufficient number of blank squares for the days of the month. The children mark the calendar each day with a suitable emblem. Yellow circles should be provided for sunny days and gray for cloudy. Tiny umbrellas denote rain; a gray circle partly covered with white indicates snow. Advertisements furnish pictures for special occasions—a little church, a toy, a birthday cake, a Christmas tree, etc. The particular emblem is less important to the children than the pleasure they take in attending to the calendar regularly, and the fact that they are being helped to a realization of divisions of time. The card should be large enough to allow for a suitable picture for the month to be mounted outside of the ruled portion. Landseer's "Squirrel and Pair of Nut Crackers" may be used for the October sheet. Coreggio's "Holy Night" for December, Washington's or Lincoln's portrait for February.

Games train the senses at the same time that they afford keen pleasure. A mother can play many games with her child without interrupting her work. Dramatization is a wonderful stimulus to the imagination, and numberless stories lend themselves to this form of reproduction. "Barbara Fritchie" was enthusiastically played by the children of one kindergarten. A chair formed the patriot's house; she leaned over the back waving her flag solemnly; Stonewall led his army past; the dialogue was fervently spoken and the army marched on.

At one small boy's party, he and his father acted several Uncle Remus and "Just So" stories, to the delight of the guests. Of course, the spirited interpretation of a tale presupposes a close acquaintance with it.

The kindergarten, aiming as it does to relate the limited world of the small person to the larger world about him, to quicken his appreciation of parents and all world workers, to deepen his wonder and reverence for natural phenomena, is much more than a mere place of amusement. The home can be made more than this also.

While the stimulus of coöperative work and play is lost in the case of one or two children, still the small duties to be performed each day, the games and the songs will prove a source of profitable amusement to the little folks. They are given a chance to express themselves, every sense is trained and made keener, and their playtime is made to serve a double purpose by teaching them valuable lessons as well.

Clearing the Table.

It does not occur to many a housewife that much confusion and time may be saved in her kitchen by the exercise of a little thought in clearing the dining table and piling up the dishes ready for washing. Neatness and order in the pantry or kitchen depend upon the manner in which the table has been cleared, and the speed and ease with which the dishes are washed depend upon the degree of orderliness and system maintained.

Dishes should be separated and sorted as they are brought from the dining room, not piled promiscuously wherever a clear space can be found on table or shelf. Scrape the dishes carefully and put those of a kind in a separate pile. A rubber scraper may be employed in cleaning off the dishes, or soft paper is good for fine china and silver. Those dishes that have held milk or eggs should be rinsed with cold water immediately.

All clean dishes and left-over food should be put away at once, and salt and pepper shakers, sugar bowls, etc., should be filled when taken from the table.

Place the dishes on the draining board at the sink in the order in which they are to be washed. These may seem little points, but they will facilitate the washing of the dishes.

Sugar Trimmings.

First cross off soda fountain and ice cream treats.

Reduce candy consumption to an after-dinner bonbon.

Use fruit and nuts, candied honey or maple sugar for cake fillings.

Sweeten fruit drinks with honey or corn sirup.

If you must sweeten breakfast cereals, try figs, dates, raisins, sirup or a light sprinkling of maple sugar.

Use honey, corn sirup, dark sirup or maple sirup with hot cakes and in bread and muffins.

Try cakes that call for honey or sirup instead of sugar.

Tide over the sugar shortage by using now your jellies, jams, preserves and fruits canned with sugar.

Replace white sugar candies with sirup candies, or sweets made from figs, dates and raisins combined with nuts.

For desert serve a fruit salad of fruit omelet; cream cheese with honey or fine preserves; fruit desserts with honey or just enough white sugar to bring out the fruit flavor.

To Those Having Charge of Little Children.

A series of articles on the care and training of small boys and girls at home is being issued weekly by the United States Bureau of Education. They deal with such topics as understanding children, outdoor and indoor games and occupations, playmates, plays and toys, books, stories, pictures, music and pets.

The authors of the series are mothers who were formerly kindergarten teachers, and, therefore, well qualified, both from training and experience, to write on this important subject.

If you care to receive the articles as issued, send name and address with request to be put on the mailing list for Mothers' Articles, to the Kindergarten Division of the United States Bureau of Education, Washington, D. C.

Light Corn Bread.

To the Editor:—I would like to make inquiry of some of the good farm wives for a recipe for the good old-fashioned fermented light corn bread. Is it a lost art in these days? We are being urged to use more corn, and it has set me thinking of this good old bread. Perhaps someone can tell me how to make it. W. H. B.

Poisoning From Home-Canned Food.

Although reports have been widely circulated that home-canned fruits, vegetables and meats are causing a good deal of food poisoning, housewives need not lose their confidence in the stores of foods they have preserved for winter's use. There is every reason to believe that they are sound and wholesome, for authentic instances of food poisoning due to the use of home-canned products are exceedingly rare.

For the information of housewives who are everywhere deeply interested in this matter, the following facts about home-canned products are given out:

1. Poisoning due to home-canned

1/3 Less Coal—1/2 More Heat

Yes! Just That If You Install

PIPELESS CALORIC FURNACE

The Original Patented Pipeless Furnace—

Are you, like the rest of "folks"—hunting ways and means to cut the "high cost of living?"

Well! here is an excellent starter. By installing the Caloric Pipeless Furnace you can lessen your annual fuel bill by a third or more and have a **much warmer home than ever before.**

We have hundreds of letters from enthusiastic users in all sections of the country that prove what we say beyond any question. Here is a sample letter:

"I always heated with hard coal at $45 and $15 for cooking and laundry, total $60. Last November I installed one of your No. 43 Caloric Patented Pipeless Furnaces and have heated six rooms and bath for $32.00. including cooking and laundry. We had a few days during the winter that were 18 to 20 degrees below and I had no trouble keeping seventy degrees upstairs and downstairs."

Why Not Have This Wonderful Furnace Yourself?

This is the furnace that heats through **one register.** It does away entirely with long heat pipes and sends its flood of warmth and comfort directly up to circulate without hindrance throughout the whole house. The farthest room feels its influence as much as the one in which the register is located, and a cool spot isn't to be found anywhere except in the cellar.

This is the most natural and healthful way of heating, and because the method is **direct,** it requires less coal, coke or wood—hence the great fuel saving advantages of the Caloric Furnace.

The Caloric may be installed in any home, new or old.

Let the Caloric dealer in your town tell you the whole interesting story. Also, let us send you our remarkable guarantee, startling in its direct assurance of your satisfaction.

2536 Gest Street, -:- Cincinnati, Ohio

"98 Years of Service"

Foot-Schulze & Co. Saint Paul

THIS MARK ON THE SOLE DENOTES QUALITY

Value Counts—Not Price

What you **get** for your money is the important question now, especially when you buy footwear.

Foot-Schulze Footwear gives unusual value. Here's a logical reason: Our new, sunlighted, wonderfully equipped, efficiently organized factory makes our manufacturing more competent. It promotes better working, better thinking, better planning.

The net result is that Foot-Schulze Shoes are **made** better than ever.

Another reason is: We have made no attempt to meet the rising costs by cheapening Foot-Schulze Shoes. The Foot-Schulze trademark means just as much as it always has. It still is making friends.

You'll get surprising value, if you buy Foot-Schulze Shoes. Find the Foot-Schulze dealer in your town. He's easy to find; a good man to know.

Foot, Schulze & Co.

THOUSANDS OF

American Housewives Helped Write This Wonderful Cook Book of

FAVORITE RECIPES

Edited by
MARION HARRIS NEIL

FOR years and years, THE PEOPLE'S HOME JOURNAL has advocated the "Conservation of Food." We have always encouraged our million readers to send us their favorite recipes which we published from time to time. Finally we gathered together the most wonderful collection of tried and tested home recipes and now present them in one massive volume of over a thousand practical recipes bound in sanitary, washable sanitas, a book of over 400 pages, size 5¼ x 7½ inches, comprising 33 departments covering every branch of culinary art. This excellent Cook Book is

Edited by Marion Harris Neil

the Famous Expert and Recognized Authority, who is also conducting in the columns of THE PEOPLE'S HOME JOURNAL

War-time Classes in Economics

Approved by the Food Administration

It stands to reason that a Cook Book compiled as this one has been with tried and tested recipes sent from every corner of the land, combining as it does the cream of a million kitchens, and the wisdom of a thousand cooks, edited by a famous expert, should surpass in usefulness and practicability any other cook book which may have preceded it. The Favorite Recipe Cook Book is without a peer and is undoubtedly the most complete and comprehensive ever offered to the public. Included in the list of subjects authoritatively covered are: Soups, Fish, Meat, Sauces, Entrees, Salads and Salad Dressings, Meat Substitutes, Cheese Dishes, Economical Dishes, Left Overs, Emergency Dishes, Sandwiches, Chafing Dish Recipes, Bread and Biscuits, Fireless Cookery, Invalid Dishes, Baby Dishes, Beverages, Desserts, Pudding Sauces, Pies and Pastries, Cakes, Icings and Fillings, Ice Cream and Ices, Fruits, Candies, Preserving and Canning, Table of Proportions, Table of Weights and Measures, Time Table of Cooking

FOOD CONSERVATION DISHES

We have included in this very up-to-date Cook Book a complete collection of Meat Substitutes to save the expense of meat without missing it from the menu. Economical Dishes—pages of them—that will provide many a delightful meal, at exceedingly small cost. How to use whatever is left over, and make it a substantial and pleasing part of the next meal, is fully told. There are dozens of unique Emergency Dishes, giving ready advice upon how to "prepare something in a hurry"—and do it so well that unexpected guests will be delighted! If baby's food does not agree, turn to the chapter on Food for the Baby, and learn what will agree. There are many dishes intended for invalids and a common-sense chapter on Preserving and Canning.

GIVEN

This wonderful volume of "Favorite Recipes" may be had without expense and will be sent post-paid to any reader of THE LADIES' WORLD who will send us one new two-year subscription (24 copies) to THE PEOPLE'S HOME JOURNAL at $1.50 for two yearly subscriptions at 75 cents a year, each one of which may be your own. Act quickly, our Edition is limited.

THE PEOPLE'S HOME JOURNAL

"A magazine for every member of the family" is a welcome visitor in more than 900,000 homes because the editorial contents of every issue are of unsurpassed excellence, including intensely interesting feature articles and a powerful COMPLETE NOVELETTE and gripping serial and short stories by celebrated authors, artistically illustrated by famous artists. The advice and practical assistance of the experts who edit the departments devoted to household problems will be found invaluable. Particularly the Department on WAR-TIME CLASSES IN ECONOMICS conducted by Marion Harris Neil and approved by the Food Administration and the Department of Agriculture, Washington. The other departments cover a wide range of subjects, including, among others, Mother and Child Interest, Home Development and Decoration, Fashions, Needlework and The Green Meadow Club, which is admitted to be the best page for children that is published by any magazine today.

THE PEOPLE'S HOME JOURNAL
Established in 1885
76-88 LAFAYETTE ST., NEW YORK CITY

fruits very rarely if ever occurs. A few cases have been reported in the United States, but adequate proof is lacking in most. The acid nature of fruits makes it comparatively easy to sterilize them. Of course, imperfect sealing or carelessness at any stage may lead to molding or to "working." The contents of such jars should, of course, be discarded.

2. Vegetables, particularly beans, and corn, are more difficult to can than fruits. They do not contain much acid. Nevertheless, if directions are carefully followed, it will be unusual for the contents of a can to spoil. If one does ferment, or spoil, the housewife should be sure that it is destroyed, for it may cause serious illness if eaten. It is questionable if a can of vegetables ever spoils without the development of a decided taint which is easily detected.

3. An additional safeguard is also thrown about the use of canned vegetables in that they are generally heated before being served. The poisons which might develop in a spoiled can are completely destroyed and rendered harmless by boiling. There need never be the slightest fear concerning the use of canned vegetables, provided they are served hot. It is conceivable that tainted string beans, for example, might be used in salads without being heated and not be detected. The danger, even here, is certainly very slight.

In short, there is no good reason for alarm concerning the use of home-canned products. Millions of people are doing it in perfect safety. Use good judgment by discarding and destroying the contents of spoiled cans. If there is any question, heat before serving.

Recipes for Wheatless Days.

Barley Muffins.—One cup sour milk, one tablespoon sugar, one egg, one-half teaspoon soda, one-half teaspoon salt, two tablespoons melted fat, two and one-fourth cups barley flour, two teaspoons baking powder. Beat eggs, add sugar, salt and soda dissolved in a little cold water. Sift flour and baking powder together and combine with first mixture. Add the melted fat and beat well. Bake in well greased muffin pans until thoroughly done, about one-half hour, depending upon the size of the muffins.

Squash Pie.—One and one-fourth cups steamed and strained squash, one-third cup sugar, one-half teaspoon salt, one-fourth teaspoon each of cinnamon, ginger and nutmeg, one egg, one cup milk. Mix sugar, salt and spice, add squash, egg slightly beaten and milk gradually. Bake in one crust. If a richer pie is desired use one cup of squash, one-half cup each of milk and cream, and an additional egg yolk. For the pastry use two cups barley flour, one-half teaspoon baking powder, one-half teaspoon salt, one-third cup fat, water to make a stiff dough. Combine as for other pastry. This crust is particularly good for mince, apple, squash and pumpkin pie.

Recipes for Meatless Days.

Roast Rabbit.—Wash the rabbit with soda water. Lay in salted water for an hour. Stuff the rabbit with onion, celery or chestnut dressing and sew up. Line a baking pan with the following: One onion and one carrot cut up, a few cloves, whole pepper corns and one bay leaf. Rub rabbit with salt and pepper and lay it upon this dressing, putting fat here and there over the rabbit. Sift a little flour over the top and pour a cup of stock or hot water into the pan. Cover tight and roast, basting frequently. When ready to serve, put on a hot platter and garnish with slices of lemon and cranberry jelly or currant jelly.

Codfish Balls.—One cup salt codfish, two heaping cups potatoes, one-eighth teaspoon pepper, one egg, one-half tablespoon fat. Wash fish in cold water, and pick in very small pieces, or cut, using scissors. Wash, pare, and soak potatoes, cutting in pieces of uniform size before measuring. Cook fish and potatoes in boiling water to cover until potatoes are soft. Drain through a strainer, return to kettle in which they were cooked, mash thoroughly (being sure there are no lumps left in potato), add fat, egg, well beaten and pepper. Beat with a fork two minutes. Add salt if necessary. Dredge hands with flour, form into round, flat cakes about three-fourths inch thick; brown each side in a small amount of hot fat. Serve hot.

Baked Bean Soup.—Three cups cold baked beans, three pints water, two slices onion, two stalks celery, one and one-fourth cups stewed and strained tomatoes, two tablespoons fat, two tablespoons barley flour or one tablespoon cornstarch, one tablespoon Chili sauce, salt, pepper. Put the first four ingredients in a saucepan; simmer thirty minutes. Rub through a sieve add tomato and Chili sauce; season to taste with salt and pepper and bind with the fat and barley flour, or corn starch. Cook together.

THE YOUNG FOLKS.

Is Helping Uncle Sam.

Dear Young Folks:—I am eleven years old and live on an eighty-acre farm. My father has fifty head of cattle and six head of horses, also thirty head of pigs. We have two silos, a large red barn, also a large house. Last year we built a new cement garage for our car. Father raises apples and potatoes. We have 400 apple trees.

Are any of the Young Folks trying to help Uncle Sam win this great war? My parents have bought liberty bonds to help Uncle Sam. Gertrude.

Your Carving

will call for no apologies *this* Thanksgiving Day if done with a KEEN KUTTER Carving Set.

There's a temper in the *forged* steel blades of KEEN KUTTER Carvers that makes them take and hold a keen and lasting edge.

You'll lose all nervousness over carving before your guests the very moment you get a KEEN KUTTER in your hand.

And that holds good for every meal for years and years to come.

KEEN KUTTER Carving Sets are inexpensive and guaranteed —*satisfaction or your money back.*

"Try, Try Again."

Dear Young Folks:—I have read your letters for some time and enjoy them very much. This makes the fourth time I have written and I have never seen any of my letters in print, but I am going to try once more. I believe in the old saying, "If at first you don't succeed, try, try again."

I have quite a few pets—eight cats, one dog and a pony. I like them all. I have three brothers and one sister. We live one mile from school.

I am going to ask a riddle: What has an eye, but no head?

Lulu Louise.

A Recipe for Beulah.

Dear Young Folks:—This is my first letter. Each week when the paper comes I read the letters from the Young Folks. They are very interesting, but I like the riddles and recipes the best of all.

I live on a farm of eighty acres. I do not go to school this year. I finished the state graded school last year, and now I am working hard on the farm. I think most of our Young Folks like the country better than the city, and I agree with them. We live about eight miles from town. We have a car. Almost every farmer around in our neighborhood has a car. In the summertime we take a ride almost every evening, but now it is getting colder, so we stay at home.

As I like riddles I will have to give the boys and girls of our page one to guess. What goes up when the rain comes down?

I am sending Beulah a recipe for a chocolate loaf cake. Beat to a cream one and one-half cups sugar and one-half cup butter; add two eggs, well

beaten, then one-half cup milk, one teaspoon vanilla; sift two cups of flour and two teaspoons baking powder together and mix with other ingredients. put one-half cup sugar, one-half cup milk and one and one-half squares chocolate in a saucepan and cook until chocolate is dissolved. Add to cake batter and bake three-quarters of an hour in a moderate oven.

Will someone please send me a recipe for a dark frosting? Susan.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Enclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date fall and winter 1917-1918 catalog, containing 550 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating thirty of the various simple stitches), all valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

1266—Set of baby's one-piece long clothes with front closing. It will require for the sack, ¾ yard of 27-inch material. For slip, 2¼ yards of 36-inch material. For wrapper, 2¾ yards of 27-inch material. For barra coat, 1⅛ yards of 40-inch material.

1596—Ladies' house or morning dress. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6⅜ yards of 36-inch material for a 36-inch size.

1629—A popular "twenty-minute" apron. The pattern is cut in 3 sizes: Small, medium, large. It requires 5½ yards of 27-inch material for a medium size.

Waist 2097-Skirt 2076—A pleasing combination. The waist pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure, and requires 3⅛ yards of 36-inch material for a 36-inch size. The skirt is also in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure, and requires 3⅜ yards of 44-inch material for a 24-inch size. Two separate patterns, 10 cents for each pattern.

2264—House coat for men. The pattern is cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches breast measure. Size 38 requires 3⅛ yards of 36-inch material.

2269—A good dress for the growing girl. This pattern is cut in 4 sizes: 8, 10, 12 and 14 years. Size 10 will require 3¼ yards of 44-inch material.

2270—A simple dress for mother's girl. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. Size 8 requires 3⅜ yards of 44-inch material.

2271—A simple, stylish model. The pattern is cut in 3 sizes: 16, 18 and 20 years. Size 18 requires 4⅞ yards of 44-inch material.

2276—A smart style for the young miss. The pattern is cut in 3 sizes: 12, 14 and 16 years. Size 14 will require 4¼ yards of 36-inch material.

2278—A set of pretty bags. The pattern supplies each of the three styles illustrated and is cut in one size. Each one requires 1 yard of 27-inch material.

2290—A unique and attractive style. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 6 yards of 36-inch material.

2288—A charming negligee. The pattern is cut in 4 sizes: Small, 32 and 34; medium, 36 and 38; large, 40 and 42, and extra large, 44 and 46 inches bust measure. Size medium requires 7¼ yards of 36-inch material.

International Sunday School Lesson.

(By REV. P. B. FITZWATER, D. D., Teacher of English Bible in the Moody Bible Institute of Chicago.)

Lesson For November 11, 1917.

LESSON TEXT—Nehemiah 1.

GOLDEN TEXT—"Whatsoever we ask, we receive from him, because we keep his commandments, and do these things that are pleasing in his sight." —I John 3:22.

Some twelve or fourteen years after the revival of the worship of Jehovah under the administration of Ezra, Nehemiah led a company to Jerusalem to restore the city walls and civil authority. The walls and gates of the city had lain in ruins ever since they were broken down by Nebuchadnezzar. In this condition the remnant of the Jews who had gone back to Jerusalem were exposed to the dangers of assaults from the surrounding enemies. Not only was this exposure detrimental to the peace and comfort of the people, but it was a matter of severe reproach to them (v. 3). Nehemiah was a man of strong character. Though occupying a position of high honor and responsibility in the very center of the great heathen capitol, the desire to honor God was uppermost in his heart. He is an example to all young men, demonstrating to them that it is possible to be true to God regardless of the environment in which he may be compelled to live. In order for a man to thus stand, his life must be rooted in Christ, and these roots—our faith—must be watered and kept alive through vital communion with God in prayer and study of His Holy Word.

I. Nehemiah Learns of the Affliction and Reproach of the Returned Remnant in Jerusalem (vv. 1-4).

1. The time (v. 1). It was in a winter month, November or December, in the 20th year of Artaxerxes. He was engaged in the performance of his accustomed duties as cup-bearer to the king, when the news came to him of the deplorable condition of Jerusalem and the remnant who had gone there.

2. The occasion of (vv. 2, 3). The visit of Nehemiah's brother and certain men of Judah made it possible for him to inquire concerning the state of the remnant and the conditions of Jerusalem. They informed him that they were in great affliction and reproach.

3. The effect upon Nehemiah (v. 4). He was greatly moved by the story of the distress of his brethren. Though occupying a position of honor, and enjoying all that heart could desire, he keenly took the misfortune of his brethren to heart. He not only shed tears of sympathy, but took these burdens in prayer to God. This is the proper way to sympathize with the unfortunate. It is manly to weep with those in distress, and to pray for those who have need. Jesus wept over Jerusalem and prayed for his own. Nehemiah exhibited the spirit of true patriotism. The affliction and shame of his own people went close to his own heart. National and racial solidarity constitutes the real basis of patriotism. The reproach and affliction of a nation is the reproach and affliction of every member thereof.

II. Nehemiah's Prayer for Israel (vv. 5-11). We are taught that in the midst of affliction, we should pray. Nehemiah in this early time practiced this New Testament direction. A study of his prayer is most helpful.

1. It was earnest (v. 4). He fasted and prayed for several days. When men are willing to desist from food and turn aside from their occupations to pray to God, they are unmistakably in earnest. This is true fasting.

2. The ground of (v. 5). He plead covenant relationship and the faithfulness of God in keeping his covenant. It is a good thing always in our praying to plead thus with God. He is delighted when we come as children pleading for the things we need on the basis of our relationship to him.

3. Unselfish (v. 6). He has as his supreme object the welfare of Israel. His personal interests were not affected, either for better or for worse, by the condition of the Jews in Jerusalem. Many prayers do not count with God because they are self-centered.

4. Penitent (vv. 6, 7). He acknowledges that the state of Israel was due to disobedience to God's commandments and their corrupt dealings with God. So completely had he identified himself with his people that he included himself with Israel as having sinned.

5. The prayer of faith (vv. 8, 9). He believed the word which God had spoken to Moses touching his willingness to restore and bless his people, though he was obliged to severely judge them. In our praying, we should be able to point to some definite promise in God's word, as we plead with him. Faith takes God at his word, and holds him to it.

6. Definite (vv. 10, 11).

a. He pointed to the specific people, as those redeemed by God's powerful hand.

b. He asked that God would prosper his way and grant him mercy in the sight of the king. This was a part of wisdom on Nehemiah's part. Before going before men for consideration of important interests, we should ask God to prepare their hearts, so that they will listen sympathetically to our plea. This we should do in all things, and we can do it, when our own hearts are right, and we see the good of others and not that of ourselves.

REGISTERED—Four Polled Durham cows, guaranteed good milkers; four roan Polled Durham bulls, 6 months old; one Short-horn bull of serviceable age and Poland Chinas of both sexes. Meadowside Stock Farm, A. L. Best, Downing, Wis.

GASOLINE ENGINE.

FOR SALE—One 10-h. p. Fuller & Johnson gasoline engine; first-class condition; price, $175. Foster Bros., Tomahawk, Wis.

CLOVER SEED.

WANTED—Good quality medium Red and Alsike clover seed. Send samples. Dadmun Brothers, Whitewater, Wis.

TANNING.

LET US TAN YOUR HIDE—Cow, horse or calf skins for coat or robe. Catalog on request. The Crosby Frisian Fur Co., Rochester, N. Y.

POULTRY AND PET STOCK.

BARRED PLYMOUTH ROCKS and Buff Orpington ducks; Chicago winners; great layers; established 1892; eggs for hatching: $1.50, 15; $4.50, 50; $8, 100; prompt delivery and good hatch guaranteed. G. Earl Hoover, R. 24, Matthews, Ind.

HATCHING EGGS; prize-winning S. C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns. $1.50 per 15. Ledge View Poultry Farms, Box W. F., Fond du Lac, Wis.

HATCHING EGGS—S. C. Reds, prize-winners all leading shows. Eggs, $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

AIREDALE TERRIERS—The twentieth century all around dog. Good hunters, farm and watch dogs and pets. Puppies for sale. Dr. Z. W. Gilbert, Melrose, Wis.

RHODE ISLAND REDS—Setting of 15 eggs from pure-bred prize-winning Rhode Island Reds, $2 per setting; three settings for $5. Hildebrandt & Vea, Stoughton, Wis.

PEDIGREED AIREDALES—Registered 2-year-old matrons, $25; male puppies, $12; female puppies, $6. Willow Spring Farm, R. 36, Port Byron, N. Y.

DOOTOR'S big, beautiful "Ringlet" Barred Rock cockerels, on approval, $3 to $5 each. Winners. Heavy-laying strain. Dr. L. C. Higgins, Melrose, Wis.

FOX TERRIERS—Any age; best rat, pet, watch or skunk dogs; some bred females. T. H. Kaldenberg, Pella, Iowa.

SINGLE COMB White Orpington cockerels from prize winning stock for sale. B. H. Berg, Eau Claire, Wis.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Mashes and Ground Grain for Poultry.

In his work on "Poultry Breeding and Management" Mr. James Dryden discusses the relative merits of ground and unground grain for poultry, and, in addition, specifies when each shall be used and also when the feeding of mashes is advisable. He says:

It pays to feed part of the grain ground. It is a saving of energy, and energy is furnished by the food; therefore, it will save food to grind some of the grain for the fowls. Ground food is more quickly digested and assimilated than whole. The hen can manufacture the eggs faster with ground food than with whole grain. Experiments by Wheeler showed that fowls having half their grain ground and moistened required 20 per cent less food to produce a dozen eggs than fowls having all whole grain. Fowls, however, relish the whole grain, or a large percentage of it whole. Probably one-third of the grain ground would be a safe limit to feed. The danger in feeding one-half or more of it ground would be that the fowls would be liable to lose appetite and not eat enough to fill the demand for heavy egg yield.

If fed heavily on wet mash in the morning, the fowls would gorge themselves and would not be as active the rest of the day as if fed a light feed of grain in the litter in the morning. A good feed of mash about an hour before going to roost, followed by a feed of whole grain, will give satisfactory results. In cold weather especially the practice of feeding whole grain liberally the last feed of the day is a good one. Whole grain will "stay with them" better throughout the long, cold night than mash, and keep up the heat of the body better. It will save feeding in the morning if at the last feed at night enough grain is thrown on the litter to more than satisfy the fowls, and leave some for them to begin scratching for in the morning. Where wet mash is fed the first thing in the morning, this should not be done. The writer prefers to feed the mash in the morning, just as soon as the fowls come from the roost, but to feed only as much as they will eat up readily, so they will go to work scratching in the straw for the whole grain. It is not so material at what time of the day the soft food is fed, as it is that the fowls be kept active and retain their appetites.

These observations come from an expert who has extensive practical and scientific knowledge of the subject and those who have not been well satisfied with their method of feeding can well afford to give heed to what is here said on the question of feeding mashes as well as ground and unground grain.

Wisconsin Dairymen's Convention.

The forty-sixth annual meeting of the Wisconsin Dairymen's Association will be held at Janesville, Wisconsin, November 20th, 21st and 22d. One of the most important topics to be brought out at this meeting will be the cost of milk production. Among the speakers are E. S. Brigham, J. B. Bain and R. C. Reed. Mr. Brigham owns and operates a dairy farm in Vermont and is commissioner of agriculture for that state. Mr. Bain is employed by the United States Dairy Division and for two years has been employed in investigating the cost of production of milk. Mr. Reed is largely responsible for the Michigan Producers' Organization. He is a breeder of Holsteins. The program for the Janesville convention is as follows:

Tuesday, November 20th.

First Session—10 A. M.

1. Address of Welcome—Mayor James A. Fathers, Janesville.
2. Response—C. H. Everett, editor Wisconsin Agriculturist, Racine.
3. President's Annual Address—Math. Michels, Peebles.
4. Cow-Testing Associations in Wisconsin—Noel Negley, Madison.

Second Session—1:30 P. M.

1. My Opportunity for Service—Bessie Lipsitz, Avoca. (Miss Lipsitz is the first woman cow tester in America.)
2. New Legislation and Plans for Eradication of Bovine Tuberculosis—Hon. C. P. Norgord, State Commissioner of Agriculture, Madison.
3. The Cow We Need for Profit—Geo. McKerrow, Pewaukee.
4. Men's and Boys' Cow-Judging Contest.

Third Session—8 P. M.

1. The Use of Milk as Food During the War—Miss E. L. Amery, College of Agriculture, Madison.
2. Relations of Producer and Consumer—Hon. C. E. Lee, Assistant Dairy and Food Commissioner, Madison.

Wednesday, November 21st.

First Session—10 A. M.

1. A State Milk Producers' Association—R. C. Reed, Secretary Michigan Milk Producers' Association, Howell, Mich.
2. Growing Legumes for the Dairy Herd—Prof. D. H. Otis, College of Agriculture, Madison.

Second Session—1:30 P. M.

1. Legumes as a Factor in Grain Conservation—J. B. Bain, U. S. Dairy Division, Washington, D. C
2. The Milk Producer and Co-operation—Hon. E. S. Brigham, Commissioner of Agriculture, St. Albans, Vt.

Thursday, November 22d.

First Session—10 A. M.

1. What Shall I Feed This Winter?—A. J. Glover, Associate Editor Hoard's Dairyman, Fort Atkinson.
2. The Law and the Milk Producer—Hon. Walter Drew, Assistant Attorney-General, Madison.

Second Session—1:30 P. M.

1. The Future of Dairying in Wisconsin—Charles L. Hill, Rosendale.
2. Barn Building and Ventilation—W. D. James, Fort Atkinson.
3. Soil Fertility and the Cow—Prof. W. E. Tottingham, College of Agriculture, Madison.

The regular program contains illustrations of the champion butter-producing cows of Wisconsin, and also records of cows in Wisconsin cow-testing associations that have produced over 450 pounds butter fat (562 pounds butter). Copies of this program will be supplied on request by Paul C. Burchard, secretary, Fort Atkinson, Wisconsin.

The Wisconsin Dairymen's Association has had special charge of cow-testing associations since their introduction in this state ten years ago, and in that time over 250 associations have been organized and over 130,000 cows have been tested for a year. On July 1, 1917, Wisconsin had eighty-three associations, more than any other state, that are putting the test of merit on 41,000 cows for 2,500 farmers.

A LAMP WITHOUT A WICK.

The Sunshine Safety Lamp Co., 311 Factory Bldg., Kansas City, Mo., has a new portable gasoline lamp which gives the most powerful home light in the world—a blessing to every home not equipped with gas or electricity. 300 Candle Power at one cent per night. This remarkable lamp has no wick and no chimney, is absolutely safe and gives such universal satisfaction they are sending it on Free Trial. They want one person in each locality to whom they can refer new customers. Take advantage of their free trial offer. Agents wanted. Write them today.—Adv.

ARE YOU LOOKING FOR THIS?

Good land at a low price in the Sunny Uplands of Louisiana; land that can be made to produce more, and at less expense than the highest priced land in the North; land in an ideal climate where winters are like spring and summers are cooled by the delightful gulf breezes; long growing seasons; corn, cotton, winter oats, cattle, hogs, chickens, delicious fruits, potatoes, sweet potatoes, peanuts, beans, early and late garden truck, strawberries, etc.—an immense variety of products including practically all grown in the North and many besides. Low priced land near good, live towns and cities, with railroads running north and south, east and west; land having splendid possibilities for oil and located less than 100 miles from several of the largest oil refineries in the world. We have already sold more than 45,000 acres of this land. Price $20 to $30 per acre, the last named price being for a few partially improved farms; easy terms. Write us for full information, or come and see us; excursion rates. American Farm Land Company, DeRidder, Louisiana.

$6.00 PER ACRE Land that will produce good crops of Oats, Corn, protein crops, such as Clover, Velvet Beans, Soy Beans, Cowpeas, Peanuts, Irish and Sweet Potatoes, two and three crops a year, can be purchased at $25.00 per acre in the **HIGHLANDS OF LOUISIANA**

On long easy terms. Down payment is $6.00 per acre. No further payment is required for three years except 6 per cent annual interest on deferred notes. Mild healthful climate; long growing season; ample rainfall; remote from swamp region; free open pasture the year around; pure soft well water. Get facts in our big FREE illustrated book.

"Where Soil and Climate Are Never Idle"

A postal request with your name and address will bring it. Write for low round trip excursion rates from your town.

Long-Bell Farm Land Corporation
416 R. A. Long Bldg., Kansas City, Mo.

BARE POULTRY CO. Box 750, Hampton, Ia.

Defense Work in Rural Districts.

(Continued from page 8.)

the corn was largely frosted. We have encouraged our farmers to seed more winter wheat and rye. The live stock in our section is in fine condition and many of our farmers have bought pure-bred bulls. We have many fine herds in our county. Crops are all good except corn, which got hit by an early frost and still we believe it is better than was at first anticipated. A. S. Offerdahl,

Sauk County.

To the Editor:—Sauk County Council of Defense made a special effort to help the farmers of Sauk county to get help. This is a dairying county, with potatoes for a cash crop, and much hay, corn and oats are grown. To get in the crops was a serious problem for our farmers and the council did much to get labor for them. At all times the labor problem was acute and some hay suffered by reason of it. But what we lacked in labor the good Lord made up for in weather and the harvest was generally well taken care of.

As a rule, the potato crop on the farms is a little above normal in acreage. The principal increase comes through the planting of vacant lots and small patches in the cities and villages. The yield is not large, but it is uniformly good—about 100 bushels to the acre. And the quality is fine.

There seems to be small change in live stock from normal. The increase in dairy cows has been large, principally by the purchase of grades from other near-by sections. The price of butter fat, especially in creameries and local cheese factories, has been the cause of this influx of cows. Hogs are still in good demand, especially brood sows. Silos are full and the silage is reported as good, notwithstanding the early frost that did much damage to corn. Verne S. Pease,
Publicity Man.

Green County.

To the Editor:—The Green County Council of Defense was organized on May 4, 1917. At the time of its organization the purposes of the council were defined as "promoting the interests of preparedness." This preparedness, in a large measure, consisted of an increase in production of foods and food crops, and of taking an active interest in all affairs which tended toward helping the United States win the war.

The first step in this direction consisted of securing the services of Prof. L. F. Graber, of the Wisconsin Experiment Station, to act as emergency food agent. Professor Graber, acting in conjunction with County Superintendent of Schools J. N. Burns, held twenty alfalfa lectures and preparedness meetings in as many different parts of the county.

At these meetings the subject of alfalfa growing was the main topic discussed. Alfalfa is one of the biggest crops grown in this section, for, after all, Green county is primarily a dairy county, and an increase in alfalfa acreage means an increase in the production of the greatest human food, milk. One of the first things which Professor Graber found was that even in this great limestone country a large portion of the surface soil was too acid to produce alfalfa to the best advantage. He immediately took up the task of correcting this great fault.

At each alfalfa demonstration he secured the names of all men who wished to have their fields tested for acidity. Later on he visited these farms and by means of the Truog test, he was able to advise the amount of lime necessary to correct the sourness of the soil. More than 100 tests were made throughout the county. Samples of limestone were taken from all parts of the county, and a limestone grinder was put in operation to produce the limestone for neutralizing the sour soils.

Last spring, under the supervision of Superintendent Burns, 2,500 bushels of seed potatoes were brought into Monroe and distributed in five-bushel lots to growers throughout the county. Very good results were obtained from this plan of distribution. At present Mr. Burns is completing arrangements whereby the school children will be given the task of testing the next season's supply of seed corn.

The work of the council of defense has not been altogether along agricultural lines. For the selling of government liberty bonds, an organization was perfected, so that the help of every individual in the county was solicited. On the evening of Tuesday, October 23d, thirty patriotic meetings were held at schoolhouses in the country and sixty speakers were detailed to take charge of the work. The sale of bonds is increasing rapidly, and it looks as if Green county will at least come well over their minimum quota.

The plans for the coming year will be outlined at the next meeting of the council. The work of liming soils and of increasing alfalfa acreage, which is already 29,000 acres, will be continued. Seed corn curing demonstrations will be held and the council will assist in every way possible the work of the food administration.
James Lacey,
Emergency Food Agent.

Kenosha County.

To the Editor:—The State Council of Defense, through its labor bureau, has supplied Kenosha county farmers wtih laborers. They also have assisted the County Council of Defense in the location of a supply of potatoes, navy beans and buckwheat seeds.

The County Council of Defense, through its agricultural committee, has supplied farmers with 2,500 bushels of seed potatoes, fifty bushels of navy beans and fifty bushels of buckwheat at cost. The labor agent of the county council has placed 100 laborers on farms. The county council also held patriotic meetings in each town in the county for the purpose of increasing food production.

The farmers of Kenosha county have put forth every effort to increase food production this year. The acreage of spring wheat and navy beans was increased considerably. Small grains of all kinds were very good. The yields per acre, as well as the quality, was very much above normal.

The hay crop was quite light due to the killing out of clover and alfalfa seedings. The early potato crop was better than normal, but the late crop was not more than 50 per cent of a crop.

The cabbage crop was damaged considerably by the ravages of worms and grasshoppers. Many acres were also planted too late, so that the cabbage failed to mature. The best crop is just fair. The percentage of corn which will be put in the crib in Kenosha county this fall will be very low. Ninety per cent of the farmers will be unable to pick seed corn from their own fields for next year.

Farmers all seem to be anxious to milk cows this winter as indicated by the big demand and high prices paid for good cows. There seems to be increased interest in the sheep industry. Many farmers have thin hogs which they do not know what to do with, due to the shortage of hard corn and the extreme market price of corn.

A municipal market has also been established in the city so that the farmers may bring in their vegetables for ready sale. C. C. McNamara,
Sec. Kenosha Council of Defense.

Rusk County.

To the Editor:—The Rusk County Council of Defense has worked almost entirely upon two important phases of the food production campaign among farmers. Potatoes are our great food and cash crop. No county in the state excels Rusk in the production of fine spuds. For this reason we have held twenty-one meetings throughout the county in order that seed selection, variety standards and the treatment of seed to prevent common scab and black could be thoroughly discussed at all times. During the growing season every effort possible was put forth in the way of urging the farmers to spray the growing crop to prevent tipburn and sun scald and blight. It is safe to say that there was 25 per cent more spraying done throughout the county this year than ever before. During the digging season much information was disseminated regarding the storage of potatoes and a news letter touching on the prevailing price at the terminal market was sent out from time to time. The result has been that Rusk county is harvesting one of the cleanest and best crops of potatoes that has ever been harvested in this region. The crop is not the largest in yield, however. Several fields have averaged 310 bushels to the acre, but this is the exception and not the rule.

The potato work will be the main feature of the council's spring campaign. It is the plan of the Rusk County Council of Defense that at least 80 per cent of the seed put into the ground next spring shall be Rural New Yorker and Green Mountain varieties for the late crop and Triumph and Early Ohio for the early crop.

Three hundred and fifty children in the rural districts were supplied with seed of these pure varieties and a plan is being formulated to supply every school child in the county with a peck of pure seed next spring.

The live stock work has been devoted almost entirely to the organization of local cow-testing circuits, the selling of the poorer cows and the purchase of the grade dairy stock. Several carloads of unprofitable producing dairy cows have been shipped to the central market and five carloads of high-grade Guernseys and Holsteins have been imported. All of these cows are being tested with the view of keeping less but better cows throughout the county. At the present time the indications are that our farmers will have grown enough hay and silage to winter the stock now being held, and will be able to sell a considerable quantity of oats. A campaign is being conducted among our dairymen urging them to exchange some oats for gluten feed, oil meal and barley, in order that a more balanced ration can be fed.
G. M. Householder,
Rusk County Agricultural Agent.

Douglas County.

To the Editor:—Some people say that the state council has done nothing. It is my opinion that the suggestions of the State Council of Defense have been of some value.

The increase in acreage is 22 per

FURS

Man Power Wanted For Montana's Grain Fields

Our boys in the trenches need your help in the furrows. Find your place in Montana's great agricultural army. Montana farmers are doing a big bit towards winning the war by keeping up a large and steady supply of food. Millions of acres of fertile Montana land await the plowshare to convert them into food producing acres. This land can be had at a reasonable cost and will produce twice the crops per acre than Middle West and Eastern land. ***Here lies your opportunity to serve your country and help yourself to future independence.***

The ***"St. Paul's"*** electrification of its main line across Montana is to play an important part in the future development of the state, creating new industrial activity, larger markets, higher land values, improved living conditions.

RENEW NOW

Now that EVERYONE is trying to conserve EVERYTHING, suppose we get together and conserve time and money—both for YOU and for us.

Note the date on your paper and if it reads "Nov. 17," your subscription expires in November, 1917, and you should send your renewal at once. Send $1.50 for THREE YEARS, or $1.00 for one year.

You save time and bother if you renew for three years and get the matter off your mind. And you save time and bother for us if you renew early, before the big rush of renewals comes, later on.

During the winter months tens of thousands of readers send in renewals. They come so fast that our regular force cannot handle them promptly. We must use "new help," and this causes many errors, giving trouble and annoyance to you and to us. Please bear this in mind, watch expiration date on your address tag, and renew several months before your subscription expires, if convenient. It will not cost you a cent more, and will be a great accommodation to us.

We are planning big things for our readers this season. We will try to give you better service than ever before. You will confer a favor if you renew promptly. Will you co-operate? Write today.

THE WISCONSIN FARMER
Dept. W-4, Madison, Wis.

cent, due in part to the propaganda of our council, partly to natural development and in many cases directly because of the action of the county board in setting aside $5,000 for the use of the County Council of Defense in guaranteeing payments of notes used in the purchase of seed.

Twenty-eight new silos have been completed for this year's use. The silo campaign was considered a part of the defense activities.

In the campaign for fall rye and fall wheat the county exceeded its allotment—in the former by 15 per cent and the latter 25 per cent.

The potato acreage shows an increase of 40 per cent. Production in the city limits has been greatly stimulated. The cultivated acreage in the city of Superior in 1916 was 127 acres. This was raised to 327 acres during the present season. We believe this unusually large increase is due to the campaign for increased food production.

Eighteen hundred sheep, bought in Montana, have just arrived, are paid for, and now distributed among twenty-five farmers. It is possible that as many more will be brought in before long. These sheep are being placed on the cut-over lands which are not yet ready for the plow.

Town councils of defense, organized in all towns except one, are furthering these movements. Three federal farm loan associations have been formed in the county and two potato warehouses have been built this year. The stock is in good condition, but the high price of feed is causing a slight tendency to thin dairy herds. At present the necessity of fall plowing is being emphasized, both in the city of Superior and throughout the county. The results of the campaign are already apparent. J. P. Connor,

Lincoln County.

To the Editor:—The rural residents of Lincoln county were not at all lacking in interest in the organization and work of the defense council in this county. George Gibson, one of the county's most prominent and progressive farmers, was appointed the agricultural member of the council and has been active in the work of the organization continually.

The Lincoln County Council of Defense, during the months of June, July and August of this year, was very active in aiding the farmers in securing help, which was exceedingly scarce. Not only male help was sought for the farmers, but female help as well. Farmers were unable to secure men to help them with the farm work, and they would tell us that if we were unable to get any men for them to hire a girl to do the housework and their wives would assist with the work outside.

At the first meeting of the County Councils of Defense held in Madison the latter part of May, this year, it was strongly urged that the farmers be encouraged to plant at least a couple of acres of buckwheat, and it was stated that the state had a limited supply on hand which it would furnish at cost.

Several farmers in this county gave heed to this advice and as a result more buckwheat was planted in Lincoln county this year than ever before. One farmer was late in deciding on whether or not to plant buckwheat and about the first of July came into the office and wanted me to order a bushel of seed for him from the state. I immediately telegraphed for it and it was here the following day, coming by express. Of course, the telegram, express charges, etc., made the bushel quite expensive, but he had a good crop and is well satisfied that he went to the trouble and expense that he did.

County Agricultural Representative A. H. Cole is a hard worker among the farmers and has done much good work this year in increasing crop production. Mr. Cole has conducted many farmers' meetings throughout the county and has aroused the rural residents to the realization of the fact that winning the war depended on them to a very great extent.

During the month of June the defense council office sent out the crop report cards to every farmer in the county and almost without exception they were returned properly filled in.

In closing I wish to say that the farmers of the county, as a whole, have taken a very decided interest in the work of the local defense council and at every meeting there is always a goodly delegation present from the rural districts. Joe A. Chilsen,

Marathon County.

To the Editor:—The State Council of Defense has done much recently in Marathon county working through our county council. In the spring a campaign was inaugurated to increase the acreage and this was carried to the uttermost parts of the county with splendid results. In addition to this all the tillable land which could be gotten hold of free was given over to farmers who would agree to work it. A committee was appointed to purchase and ship in good seed for the farmers and this seed was sold to our farmers at cost. You will understand this was practically a failure in Upper Wisconsin. To secure enough good seed for a potato-growing section like this required time and money, but it was done and the results show that it was given free and in some cases will be paid for after the harvest this fall.

The members of each rural school district board in our county were appointed to assist in this work so that the council was in touch with every community and was able to do effective work. The labor problem received a great deal of attention at the hands of our committee and the council was able to give assistance in a number of places where needed. Boys, sixteen to twenty years of age, were released from school duties and placed on farms where they remained during the growing season and through the harvest time. The increase in crops in our country has brought on another problem, namely, providing suitable storage accommodations for the farmers in which to take care of their crops. This was done by our council of defense and farmers can store their crop at a very small cost in a place where the crops will be safe from freezing. Our county council has also thoroughly posted our farmers on the matter of registration for army service and furnished complete information as to what was necessary to be done and the proper methods for claiming exemptions. We have a county labor agent who may be consulted by farmers at any time and he will be glad to give assistance on short notice, if necessary, with his automobile squads of workers and in any way he can. We had a special tent large enough for a circus at the Marathon County Fair where all our rural visitors were supplied with information relative to labor, seed, lands and other subjects, and where the ladies gave exhibitions and lectures on various ways to can fruits and vegetables and we were especially well pleased to have such a large crowd of farmer's wives and daughters on hand each day. Our work in this county under the council of defense has largely been along this line, especially in furnishing pedigreed seeds at cost and listing up those who have more seed than they want so that this seed may be gotten into the hands of those who are short. We have strongly recommended the conservation of heifer calves and lambs and made every possible effort to assist farmers in getting good live stock.

Miss Emma Connolly was secured from the university extension department to give lectures and demonstrations in canning. A series of these lectures was given in Wausau and in addition a number of ladies made tours into the country working along this same line with great success. All this work was in charge of the lady members of the council of defense. Our council of defense has also arranged farewell receptions for our conscripted men and many of these boys come from our farms. E. B. Thayer.

Marathon Co., Wisconsin.

In Dodge County.

To the Editor:—The Dodge County Cow-Testing Association in October had two cows producing forty-five pounds of butter fat or over. One was a grade Holstein belonging to Edward Rusch. She is eight years old, freshend in March and gave 946 pounds of 4.8 per cent milk, netting 4.8 per cent butter fat. The other was a six-year-old grade Holstein belonging to Carl Zimmerman. This cow freshened Septembr 29th, producing 943 pounds of 5.1 per cent milk netting 48.1 pounds butter fat.

Questions and Answers.

A Coil for Make-and-Break Ignition.

I have a gas engine equipped with a Wizard low-tension magneto for make-and-break ignition. Would a good make-and-break spark coil strengthen the spark any by letting the current pass through the coil to the igniter?

Answer.—A good coil should increase the spark. If your magneto is not giving current enough, run it faster. Be sure that the insulation is good on your igniter. Possibly some of the current is leaking away through carbon on the igniter insulation.

Steam Vulcanizer Fluid.

Will you please tell me what solution is in the Vulcan steam vulcanizer? I have one that cracked at one of the plugs. When I got it fixed, the repair man poured the solution out, not knowing what it was.

Answer.—The solution was probably ordinary water. Steam has a certain temperature for every pressure. By using a steam gauge the temperature may be known and controlled so that the valcanizing may be well done. Vulcanizers are, therefore, filled with water for producing steam.

Making a Ford Speedster.

Is there any way to lower the frame of a Ford. I am thinking of making a speedster and I would like to lower the frame some way. Would a Ford engine pull any higher gear than three to one?

Answer.—The shape of the springs might be changed, making them flatter. The frame might be lowered safely about two inches by this change. As the Ford springs are directly over the axles crosswise it is not possible to swing the springs from the under side of the axles. It is doubtful that anything would be gained by using a higher gear ratio than 3 to 1, this ratio being about right for your purpose. The standard Ford gear ratio is 3,636 to 1. Racing cars have several extra sets of differential drive gears of different ratios, the most speedy ratio being determined by actual trial on the track.

Kerosene for Cooling.

I have read in your magazine a letter from a subscriber who states that in very cold countries kerosene is used in radiators to keep them from freezing. Is this true? Is it practical to use it even if it is possible? If it is, in what proportion should it be mixed? I want a mixture that will not freeze at a temperature of 30 degrees below zero.

Answer.—It is possible to use kerosene in place of water for cooling in winter. The practice has never met with favor on account of the possibility of fire and the injurious effect of the kerosene on the radiator hose. Anyone using kerosene for cooling should do so with caution. Doubtless some of our readers have tried the experiment, and we would like to hear from them as to what success they have had. The usual alcohol anti-freeze mixtures are not a success at much lower than 20 degrees below zero, as so much alcohol must be used that there is danger of fire.

Electro-Magnets.

Can more magnetism be produced in a coil four inches long than in a coil two inches long, the diameter of the cores being the same, the same number of layers of wire, and the same number of ampere turns per inch? How long should a magnet be to produce the most magnetism if wound with 1,500 feet of number 30 double cotton covered wire, the core being five-sixteenths of an inch diameter? Which would produce the more magnetism; two magnets, four inches long or eight magnets two inches long, the size and total amount of wire being the same in both cases? How is it that a wire twice as long and one-half the cross-section will consume only half as much electricity, and still the larger size wire will produce the more magnetism? Will a horseshoe or bar magnet last longer if it has a wire wound around it and current passing through?

Answer.—More magnetism would be produced in a coil four inches long than in a coil two inches long, the ampere turns per inch being the same. The magnet wound with 1,500 feet of wire should be about three inches long for maximum strength of magnetism. The eight magnets two inches long would produce the more magnetism, due to a lower core saturation. A large wire will not always produce more magnetism than a small one. The amount of magnetism depends upon the ampere turns, that is, the number of amperes flowing through the wire multiplied by the number of turns the wire makes around the magnet core. A wire twice as long and of one-half the cross section will only transmit one-fourth as much current at the same voltage.

Making a Blow Torch.

I have a pressure tank and a supply of hollow wire, a part of a gasoline lighting system. I would like some suggestion as to how I could make a burner to use with this tank to heat soldering irons, etc.

Answer.—You can use the pressure tank to hold the gasoline and the hollow wire to convey the gasoline to the burner. The burner itself you will find quite difficult to make. You could buy one from your hardware dealer. A burner of this kind requires a very fine needle valve which is impossible to make without special tools.

Tearing Down Hurt This Motor.

I have an eight-cylinder Oldsmobile car that has run beautifully for 9,000 miles. I thought on general principles that I should have the engine cleaned up and so I had the carbon taken out last week, but I don't seem to be able to get it back into its former smooth-running condition. The two front cylinders on each side don't seem to fire. I have examined the joints at the intake pipes and can find no leakage. I have had the carburetor taken off and it seems to be in good condition. I went to the Stewart Warner people and they tell me that my vacuum system is in perfect working order. I have repeatedly asked the mechanic if the ignition and distribution system was all right and he tells me that it is. My own honest opinion is that the fault is in the distributor. What is the trouble?

It is a mistake to take apart any engine that is running well. When a motor is first made the parts fit very closely together, making a good solid job. After the motor has been run for some time the different parts seat themselves perfectly in line with each other. Now, if the motor is taken apart, when the mechanic puts it together again, he cannot draw up the bolts exactly as they were in the first place. Therefore, the parts do not seat properly, and by the time they again wear in to a good seat they are smaller than at first and do not fit together as tight.

We do not believe that your distributor is at fault. The distributor handles high-tension current and does not regulate the timing of the motor, merely distributing the current to the proper cylinder. We would sooner think that the valve tappet adjustments are not properly made on the cylinders that are giving trouble. These should be examined and the same clearance given between the ends of all the valve stems and their respective push rods. The usual clearance is .003 of an inch, the thickness of a piece of newspaper. This clearance must be measured with the push rod in its lowest position.

It may be that the mechanic did not properly grind the valves. Try the compression on all the cylinders. If the compression is weak on some of the cylinders, the valves probably need grinding unless the push rods are adjusted so high that they hold the valves off the seats.

It may also be that in taking the motor apart the rings have been disturbed so that they allow too much oil to work past. This would show up in dirty spark plugs. See that the spark plug points are adjusted to the thickness of a smooth dime; too wide or too close a gap could cause your trouble.

Some more points that should be examined if the trouble is not located are: The cam that operates the interrupter or breaker in the magneto or timer; the breaker points in the magneto, which should be smooth and fit together perfectly; and the fit of the valves in the valve stem guides on the intake side. Too loose a fit will cause a serious air leak.

Sometimes the rubber tube that leads from the top of the vacuum tank to the intake pipe will become frayed on the inside and the particles will plug it up. It is a simple task to examine this tube, and the trouble might possible be located there.

Many an animal has a fine pedigree, but is a poor dairy individual.

Improve Your Ford for Work or Play

WHETHER you use your Ford for business, for pleasure, or for both, you can make this great car still more satisfactory by equipping it with the

HASSLER PATENTED Shock Absorber For Ford Cars

In business use, where running cost is all-important, the Hassler should be used because it gives you from 20 to 100 per cent greater mileage from your tires, reduces up-keep a third, and increases the mileage per gallon of gas surprisingly.

In pleasure riding where comfort is all-important, the Hassler should be used because it absorbs all jolts and jars, prevents rebound, eliminates sidesway and provides the gentle, springy action similar to the riding qualities of the big $2,000 cars.

10-Day Free Trial Offer

Write today for FREE TRIAL BLANK and we will have a set of Hasslers put on your Ford without a cent of expense to you. Try them 10 days. Then, if you are willing to do without them, they will be taken off without charge. Don't ride without Hasslers simply because someone discourages you from trying them. Accept this offer and see for yourself. Over 500,000 sets in use. Write today—NOW.

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Lump in Udder.

I have a cow five years old that is getting small lumps in her udder. She got one last winter and now she has three. They are hard and about the size of small marbles. She came fresh in May and gives a good deal of milk, eats well, is fat and healthy. I would like to know what is the trouble with her and if it is safe to use the milk. If not, would the meat be fit to use if she is butchered?

Have this cow tested for tuberculosis. If she is free from this disease and a good cow otherwise, giving plenty of milk, she could be used for raising calves. The milk should not be used for human food. These lumps may or may not be due to tuberculosis. If not tuberculosis she could be fattened and butchered for beef.

Fistula of Withers.

I have a four-year-old horse that has a lump on his withers something like the fistula, but is farther back. It does not hurt him when I press on it. The lump has been present about two months. I opened it this morning and there was about a quart of yellowish matter discharge, no pus. I am using Creso Dip No. 1 as a wash, with a 90 per cent solution. I use a fountain syringe. After I wash it I use hydrogen peroxide. Now I would like to know what this is and what treatment should be used.

This lump is undoubtedly a fistula of the withers, caused by a bruise. Most fistulas can be cured, but require considerable time and treatment, and the treatment depends on the location, the different tissue affected, drainage, etc. If there is a veterinarian in your locality who is quite efficient in the treatment of fistulous withers he should be able to save you time and money in the treatment of this case.

Pneumonia.

I have recently shipped in 400 head of double treated stock pigs weighing about 135 pounds. I have had a larger death loss than usual. They seem to get gaunt, humped up, and have that "thoughtful" expression like cholera, but they do not scour like cholera. Sometimes they froth a little at the mouth just before or after death. I am hogging down corn and feeding packing house tankage, coal screenings and salt. I have done this for four falls and have never had this trouble before.

If your loss is very heavy an effort should be made to determine what is causing your loss. It is quite probably due to pneumonia from exposure in shipping or in their new sleeping places. In a herd of 400 hogs there are usually some crowded out, and these develop pneumonia. Hold postmortem on several that have just died or on very sick ones. Examine for pneumonia, worms and cholera. If the latter the matter should be taken up with the parties you purchased the hogs from.

Bull Nose in Pigs.

I have several pigs about four weeks old that have an eye trouble. The eyeball becomes covered with a film and then white matter appears, which at times almost forces the eye from its socket. It may attack both eyes and invariably leaves the pig blind and stunted. It is also contagious. Will you please tell me what can be done to stop the disease? Also, would dry slaked lime scattered about the pens be practically as a disinfectant?

These pigs are affected with necrobacillosis or bull nose. For treatment dissolve all the boric acid in soft warm water that it will hold and bathe eyes once to twice a day. The pigs and their mothers should have clean new quarters with no draft and plenty of bedding. If you cannot change their pens the old pens should be thoroughly cleaned and disinfected with compound Cresol solution, one part to thirty parts of water. This is better than air-slaked lime. If these pigs have small sore places on their faces and mouths it is a form of necrobacillosis. These sores are caused by the pigs biting each other and becoming infected. These sores should be washed with the above compound Cresol solution same strength.

Indigestion.

About three weeks ago I shipped in 225 head of western ewes. They are a fine, strong, healthy looking bunch of sheep from three to five years old. I think they came from Montana. A few days after we got them home we lost five and yesterday two more. They have been on good blue grass and timothy pasture. They are sick about two days or less, seem to suffer much pain, groan, and sometimes are inclined to lie on their backs. The lungs of all except one looked good. The intestines and pouch had a normal amount of food in them, but the small intestines seemed to be black. After taking the hide off, all over the hips and part way down the sides the flesh was black or bloodshot or else very yellow. When sick they seem very drowsy. I thought after the first few died it was caused by too sudden a change from dry feed to green. About two days before the last two died they were on an oat field that had a rank growth of green oats.

Sheep are quite subject to digestive disorders, especially when they have been shipped from other states and have a complete change of feed, and losses may occur many times under these conditions. Your feed may have been the best and this encourages them to eat more than they can digest. They should adapt themselves quickly to this feed and your losses cease. If you are still losing sheep a veterinarian should be called to investigate the possibility of an infectious disease.

Dry Dip Your Hogs
and other Live Stock with
Protexol
The STANDARD Dry Dip
Rids the stock and premises of lice and other vermin. Kills cholera and disease-spreading germs.
Protexol is a concentrated, powder-form disinfectant, prepared especially for winter use. No solution to mix, no dipping. Simply sprinkle lightly on the stock and in their sleeping places.
Better than liquid dip; stronger, cheaper, easier to use, safer.
Avoid wetting your hogs. Protexol kills the vermin and disease without exposure or risks. Keeps your stock safe—makes quarantine unnecessary.
Keeps horses, cattle and calves free from lice. Effective for poultry houses and general uses.
A Standard, Guaranteed Disinfectant, used regularly by thousands, sold by all leading dealers. Sample free on request.
10-lb. pail, express prepaid, $1.80

Tractor Demonstrations in 1918.

Committee Has Decided In Favor of One Big Event.

A meeting of the National Tractor Demonstration Committee was recently held for the purpose of determining the number and character of the tractor demonstrations that will be made next year. It was decided to have one big event, incorporating tests on fuel consumption in breaking, disking and other kinds of field work. Tests will be made on different types of traction wheels, wheel equipment and on tractive efficiency. These tests will include running wheels in the furrow on plowed ground and also on the unplowed ground. Special attention will also be given to testing out steering mechanism, and the efficiency of tractors at belt work will be demonstrated.

All in all, the demonstration is planned to give those interested more information as to fuel, traction and power than has been the case in the past. There will be one ten-hour plowing run designed to show the efficiency of a tractor on an all-day pull. The committee was given authority to sanction five other demonstrations conducted along the same general lines as those held in the past, but they will not include any tests.

The location of the big demonstration has not been assigned, but it was decided to hold it somewhere in the neighborhood of Detroit or Cleveland if suitable land can be found. It will require from 3,000 to 5,000 acres in adjoining fields to carry out the plans which the committee proposes.

A Food Training Camp.

International Live Stock Exposition so Designated by Hoover.

The International Live Stock Exposition, which will be held in Chicago, December 1st to 8th, has been recognized as a great educational factor in production and to this end it has been called by Mr. Herbert Hoover "a food training camp," and drafted into the nation's service. More and better live stock has become a military necessity and a national obligation and every possible means should be used to stimulate interest in this matter. The International Exposition has been a potent factor in the past in stimulating interest in better live stock. Tens of thousands of stockmen have attended annually where they have observed the highest type of meat and draft animals, carrying home with them the impressive lesson that the improved animal is the one to tie to.

Now that the exposition has been recognized as an arm of the government, advantage should be taken of its educational value by a larger number of stockmen than ever have attended in the past. The entries for this show closed November 1st and a report on the number of entries made will soon be forthcoming and furnished to our readers. There is reason to believe that the 1917 exposition will eclipse all former records in the character of the live stock that will be exhibited. We have passed through a successful state fair season and it is well known that our leading exhibitors have all been planning to end up the season at the International. In every class there will be a clash of blue ribbon winners and the contest will be one well worth witnessing.

Cleaning the Dairy Barn.

There is no time of the year that demands a more thorough cleaning up of the dairy barn than does the fall when the cows are brought in from the pasture fields. Scourges, such as tuberculosis and contagious abortion, greatly reduce the profits of the dairy business. The germ life which causes most of these troubles are harbored in the dust, cracks, crevices and cobwebs about the barns. A clean-up day is certainly in order at this season of the year.

There are two stages in thorough cleaning and disinfecting. First, all refuse and debris should be cleaned out, cobwebs and dust brought down, floors scraped and all litter removed. Unless this be done first fluids or liquids which carry the destroying agents into the cracks and crevices where the disease germs may be lurking will not strike the mark. The second stage of the operation consists in using a preparation that is a thorough disinfecting agent and applying it successfully. We usually use one of the standard advertised disinfectants. These give very pleasuing results when used according to directions.

Whitewash is very useful in two ways—it may act as a medium to convey a disinfectant and it also has disinfecting and purifying properties. Barns which are not painted would probably look better after a good application of whitewash and by putting in it a 5 per cent solution of crude carbolic acid or a 2 per cent solution of cresol would be an effective disinfectant, but there are other coal-tar products such as a cheap creolin which may be used with quite as good results. These preparations may be applied with a large brush, but this is rather a slow process and not an easy task when the whole barn is to be gone over. Most farms nowadays have some sort of spraying apparatus, but if one has no sprayer there is surely one in the neighborhood that may be borrowed for the purpose.

Where whitewash is being used strain the preparation through a fine sieve and apply with the hose, using as much force as possible. Cover every spot and get the liquid into every crack and crevice. After the operation is completed wash out the mangers and feed boxes. Sunlight is a great disinfecting agent. It is the cheapest one of all. Every dairy barn ought to have an abundance of fresh air and sunlight.

PROFITABLE HOGS
are the healthy ones; and the problem of the hog raiser is to keep them so.
For scours, thumps, distemper and other ailments, try Sloan's Liniment. Quickly effective and promptly relieves. Have it always handy. You will find many uses for Sloan's Liniment in your home.
At all dealers. 25c - 50c - $1.00. The $1.00 bottle has six times the amount of the 25c size.

Sloan's Liniment

Live Stock and Commercial Notes.

Gathered by Representatives of The Wisconsin Farmer.

Short-horns, Shires and Shropshires at Auction.

WM. BENNINGTON and Clara E. Bennington, administrators of the Bennington estate, Volga, Iowa, will disperse their entire herds of Short-horns, Shires and Shropshires on November 14th. The sale will be held at the farm, 13 miles northeast of Arlington, seven miles southwest of Elkader and three miles northeast of Volga. Free transportation to the farm from the above towns will be furnished those from a distance. Twenty-six Short-horns of superior individual merit, including the two-year-old roan herd bull, Conformation, a Marr Clara by White Rock, he by the celebrated Whitehall Sultan, should elicit the attention of Short-horn breeders. In few herds can be found such big, broad-backed, beefy matrons as will sell in this sale. The Benningtons were always very particular in selecting herd bulls. The bulls used previous to Conformation were Master Robin, a Marr Missie by Missie's Robin, and Imp. Clipper Czar, an Imp. Cruickshank Clipper bull weighing 2,450 pounds. There will be 11 registered Shires, nine of which are mares. Imp. Heckington Skipper, a seven-year-old roan stallion brought out by the Trumans, is included, and a number of mares sired by him are listed. He is a proved sire of excellent merit and should go at the head of some band of pure-bred mares. Our readers looking for high-class Shires can find several ton mares in this auction if they were in sale fix. Seven big grade mares of the same type as the registered mares will sell. Registered Shire stallions have been used on this farm for 35 years. Forty Shropshires of proper conformation, consisting of 20 ewes, an imported ram, three yearling rams and some ewe and ram lambs will interest the breeder and farmer looking for good, thrifty, good-wooled Shropshires of proper mutton form. This sale is one of the most important held in northeastern Iowa in several years and breeders of the above breeds of live stock will be highly pleased with the offering. See page 30 and write for a catalog, kindly mentioning this paper.—Adv.

NEXT WEEK'S SALE PROGRAM

Wednesday, November 14 — Short-horns, Shires and Shropshires, Wm. and Clara Bennington, Admrs., Volga, Iowa.

Friday, November 16 — Holsteins, Waukesha County Holstein Breeders' Association, Wm. Baird, Sec'y, Waukesha, Wis.

Holstein Breeders, Take Notice.

BREEDERS of Holstein cattle in need of registered females possessing individual merit and backed up by breeding that has made history, should be interested in the Tulloch Farms Holstein herd at Genoa, Wis. Heading this grand herd of A. R. O. cows is Rag Apple Pontiac, a beautiful animal, sired by the well-known Rag Apple Korndyke, that in turn is the sire of the $25,000 bull, Rag Apple Korndyke 8th. The dam of Rag Apple Pontiac is a 30-pound daughter of the one and only King of the Pontiacs. No bull in the state can claim a better pedigree. A. R. O. cows, or daughters of same, safe in calf to this herd bull are for sale at reasonable prices. Two nicely-marked heifer calves are also for sale at a reasonable figure. The breeding of the cows and the fact that they are in calf to this good bull would justify sales at a long price, but Mr. Tulloch has prices on them that are very reasonable. You will be interested if you will let the owner describe what he has for sale. Individually each animal is guaranteed in every respect. Write and in so doing, kindly mention The Wisconsin Farmer. See page 29.—Adv.

Anoka Farms Short-horn Sale.

THE sixteenth annual offering of Short-horn cattle from Anoka Farms, Waukesha, Wis., will occur Saturday, December 1st, and there will be presented to the public the strongest lot of cattle ever offered for public appraisal at this noted breeding establishment. Fifty head will be sold, 33 females and 17 bulls, all under two years old and representing the very last word in popular blood lines and individual excellence. This lot of cattle was recently inspected by a representative of this paper and in coming issues some particulars will be presented regarding their outstanding excellence. A handsome photogravure showing every animal in the sale is being prepared and a copy of this, together with the catalog, will be sent to those who write Anoka Farms, Waukesha, Wis., asking for the same. Kindly mention this paper when you write.—Adv.

Force Feeding Pays.

IN these days of high prices for feed it does not pay to waste it on stock, or to keep them a minute longer than required to get them in condition for market. The quicker you fatten animales intended for slaughter, the greater profit for you. As it is the nutritive value of a food that counts, the greater part of it turned into meat the greater profit. From 30 to 50 per cent of food is wasted because the digestive organs are overtaxed and it cannot be assimilated and turned into meat. Now, if you can add something to aid the digestion, you increase the feeding value and decrease its cost. The only way to profit by raising stock is to push them ahead until they reach a certain point and then dispose of them at high market price. Dr. Hess stock tonic added to the food aids digestion and increases the amount of food turned into meat and at the same time wards off disease and keeps stock generally tuned up and in condition all the time. The cost is low compared to value received. A little goes a long way. Among the ingredients are nux vomica, a nerve tonic; quassia, an appetizer; iron, a blood builder; sulphate of soda, a laxative, and several other well-known chemicals. They are just the same as used by the compounder —Gilbert Hess, M. D., D. V. S.—in his years of veterinary practice. There are in the United States and Canada over 28,000 dealers carrying the line of Dr. Hess & Clark. This is as great a recommendation that their products are right as any testimonial. All of these dealers have been authorized to refund the money for any of their products if they do not do all that is claimed.—Adv.

Vanderploeg Holsteins—La Crosse.

JOHN VANDERPLOEG, R. 1, La Crosse, Wis., is offering for sale, some well-bred Holstein bulls from five to 12 months old. Mr. Vanderploeg has a good herd of 60 head, 40 of which are registered and the balance high grade. Besides the few bulls, he also has nine yearling and heifers calves for sale. These are grade, but are nicely marked and from good producing dams and being priced worth the money. These bulls and heifers are sired by King Pontiac Asia 12th and he is out of Queen De Kol Johanna 109234, that has a seven-day record of 29.70 pounds butter, 117 pounds in 30 days. She also has a two-year-old record of 22:17. He is sired by a son of King of the Pontiacs. Besides the above stock, Mr. Vanderploeg has a few registered heifers for sale that are safe in calf to the above herd bull. This stock is priced for immediate sale and if interested it is imperative that you write at once. See page 29.—Adv.

Mississippi River Herefords.

THE Middle West appreciates good Herefords and L. M. Scott & Sons, Bagley, Wis., have a herd worthy of your attention. They have some 90 head of breeding cows, headed by bulls of the very best breeding and individuality. The young bulls that they have for sale are suitable to head pure-bred herds. They also have some good rugged bulls ready for the range. This firm can supply you with Herefords, at a price that will demand your consideration. Get in touch with them at once and when writing, will you please mention this publication?—Adv.

Marquarts Have Milking Short-horns.

MARQUART BROS., Milton Junction, Wis., advise that they have their cattle in fine shape to go into winter quarters and that the young bulls they have for sale are in nice condition for immediate service. These breeders have the goods and if you want a bull out of a good producing dam and sired by a milking bred bull—get busy. See page 30.—Adv.

Herefords.

WALTER BROS., Chippewa Falls, Wis., have a herd of Herefords that they have every reason to feel proud of. They are glad to show their cattle and visitors are always welcome. They have some very fine young bulls for sale and if you are interested in this good breed of beef cattle, write or visit these breeders, at once.—Adv.

Hillside Holsteins.

REMEMBER the Kirkpatrick Bros., of Reedsburg, Wis., if you want to buy a good cow or a promising young bull. This herd has come to the front rapidly the past few years, because they have produced the goods. They raise good cattle, have A. R. O. records and sell at "let live" prices. Write them. See page 29.—Adv.

J. F. Diley.

THOSE in need of big-type Poland Chinas should write J. F. Diley, Rush Lake, Wis., one of the pioneer breeders of the state and for several years one of the directors of the American Poland China Record Asociation. We do not hesitate to recommend Mr. Diley and his Polands. See page 31.—Adv.

Eastman, of Lancaster.

L. D. EASTMAN, Lancaster, Wis., will be glad to send you a description of the Poland China boars he has for sale. They are sired by several different boars and he can sell you a boar that will not conflict with anything you may have in your herd. See page 31.—Adv.

Schoenfeld & Son.

C. J. SCHOENFELD & SON, live at Fox Lake, Wis., and for years have been breeding Short-horn cattle and Poland China hogs. If you want anything in their line write them for details and description. See page 30.—Adv.

Frank Jordan.

THE above Duroc breeder of Oregon, Wis., has for sale six tried sows from one to four years old, some gilts and spring boars. The sows are open and if taken at once will be sold cheap. Write him.—Adv.

Short-horn Cattle.

Dec. 1, Anoka Farms, Waukesha, Wis.
Feb. 18-22, Short-horn Congress Sale, Chicago.

News of the Sale Ring.

(Continued from page 11.)

vincible gilts and the men that bought them are fortunate, for this great boar has just been appreciated. Ames Bros., Weaver, Minn., bought some of the good gilts and they will be bred to Pathfinder Disturber, and sold in their winter sale. The top sow went to McCormick, of Iowa, for $217.50 and she was a wonderful gilt. The boars did not sell as high as the gilts and some great prospects were sold. Eight gilts by "Giant" averaged $135. Fourteen boars averaged $71. It was a good sale and the buyers and Mr. Cain were well satisfied with the day's work. H. S. Allen sold the sale. Complete report follows:

No. 1, A. H. Anderson, Montevideo, Minn., $90; 2, W A. Meyer, Castalia, Ia., $92.50; 3, D. W. Blanksma, West Concord, Minn., $90; 7, J. Swindoff, Guckeen, Minn., $72.50; 8, G. A. Simons, Bloom, Texas, $50; 9, John Swenson, Willmar, Minn., $60; 12, Ames Bros., Weaver, Minn., $80; 13, J. H. Emerson, West Concord, Minn., $62.50; 14, Jas. Hanger, Gary, S. D., $70; 15, G. Carpenter-McDermott Short-horn Sale.

The Short-horn offering from the herds of Carpenter & Carpenter, Baraboo, Wis., and J. W. McDermott, Kahoka, Mo., at Chicago, October 31st, was well attended and the excellent lot of cattle offered was appreciated at good values by those present. Both Messrs. Carpenter and McDermott had drawn heavily from the best things in their herds in order to present an attractive offering possessed both of breeding and individual merit of the highest order. Much interest centered in the sale of the show cow, Maxwalton Queen, by Avondale, with a bull calf at foot by Imp. Lord Cullen and consigned by Carpenter & Carpenter. This magnificent cow went to B. F. Hales, Oak Park, Ill., for $4,200, the contending bidders being Bellows Bros., Maryville, Mo. At this price she holds the record for a Short-horn cow at public sale. Mr. Hales was a buyer of many of the top females in the sale, being a very important factor in the success of the sale. The top for bulls was $1,900, that price being paid by Alfred Swan, Dandridge, Tenn., for Cumberland Marshal 5th, a yearling son of the champion, Cumberland Marshal. This outstanding young bull came from the herd of Mr. McDermott and at the price was a decidedly conservative investment. The thousand-dollar mark was reached on fourteen animals. The cattle went to eight different states and many new names appear in the list of buyers, showing the ever widening demand for Short-horn cattle. The selling was done by Cols. Jones and Reppert in an excellent manner, assisted in the ring by "Scotty" Milne. The Carpenter & Carpenter cattle, 34 head, sold for $21,085, an average of $620. A number of young bulls not in condition to sell to best advantage kept the average down. Mr. McDermott sold 28 head for $23,250, an average of $830. The detailed sale list follows:

Consigned by Carpenter & Carpenter.

HOLSTEIN CATTLE

at his farm 4 miles east of FOND DU LAC, WIS.

TUESDAY, NOVEMBER 27, '17

50 HEAD, mostly cows and heifers bred for winter freshening to Model De Kol Burke Segis 86112, a 25-lb. bull of the noted Powell breeding. Catalogs ready November 15th.

S. H. BIRD, SALE MANAGER

H. E. A. OLSON'S HIGH-GRADE HOLSTEIN Dispersion Sale

BURLINGTON, WIS., NOV. 10

(Sale Commences at 12:30 Sharp)

100 HEAD

50 HEAD of milking age, 14 about ready to be bred, 12 due to freshen in April, 55 are daughters of Rag Apple Hijlaard (109759), that is by Rag Apple Korndyke De Kol that has 27 A. R. O. daughters, including a 30-lb. senior four year old, a 29-lb. junior four year old, a 28-lb. junior three year old and a 26-lb. junior two year old. We have used pure-bred sires of this quality for 25 years, so that the grades we are selling are practically pure-breds containing the best of blood lines. They are heavy milkers, a number of which are milking 60 lbs. a day with two milkings. Fifteen females are bred to a 20-lb. son of Sir Wayne Johanna De Kol and the rest to Rag Apple Hijlaard. Our farm, where the sale is to be held, is 4½ miles northwest of Burlington and 2 miles south of Honey Creek. Joe L. Walker, auctioneer.

THE MARKETS.

Union Stockyards, Chicago, Nov. 3:—Live stock producers and feeders have been given plenty of reason to regain whatever confidence they had lost in these industries by a statement by Food Administrator Hoover strongly reaffirming a previous statement to the effect that the government has no intention to fix the price at which the farmer shall sell his stock and by the splendid action of the market. Nothing could be more effective in stimulating production at this moment than the latter. Every branch of the market is giving a good account of itself. Beef steers sold here the first half of this week as high as $17.50, hogs to $17.35. Despite a materially increased run of cattle over last week and a 15@25c decline from the mid-week high spot, fat cattle are steady and prime higher than a week ago and the general beef cattle trade is fully 60c@$1 higher than two weeks back. Hogs have advanced irregularly $1@1.75 within a week and fat lambs are 10 to 25c higher than at last week-end. As all feeds are high, the consumer cannot hope for materially lower prices for beef, pork or mutton, at least while the war lasts.

In a statement designed to reassure the producer, Food Administrator Hoover says: "This department has repeatedly stated that it has no intention to fix the price at which the farmer sells his stock. The food administration does, however, have the duty of directing export purchases of beef and pork products, and we propose to use that power to stabilize the prices and to support remunerative prices to the farmer."

Administrator's Dispersion Sale

OF SHORT-HORNS, SHIRES AND SHROPSHIRES

AT THE VOLGA STOCK FARM

7 miles southwest of Elkader, 13 miles northeast of Arlington and 3 miles northeast of

Volga, Clayton Co., Ia., Wed., Nov. 14

26 SHORT-HORNS, consisting of two bulls, including the roan two-year-old herd bull, Conformation, a Marr Clara by White Rock, dam by Royal's Best, second dam by Imp. Royal Robin, and 24 cows and heifers that for individual merit would compare very favorably with the best in any herd. A number of the heifers are by Master Robin, a Marr Missie by Master Robin, dam by Imp. Fancy's Pride. A number of big, beefy, broad-backed cows are by Imp. Clipper Czar, a 2,450-lb. bull of the Cruickshank Clipper family. No better cattle can be found in any sale than those to be sold here.
18 SHIRES, 11 of which are registered, constitute an offering that merits the attention of the very best breeders and horsemen. Imp. Heckington Skipper, a seven-year-old roan sire, sells and the colts by him are of exceptional merit. Nine registered mares, all young, and several by the above horse, are big, heavy-boned and attractive from any point of view. They are the kind that weigh a ton in condition.
40 REGISTERED SHROPSHIRES, consisting of one imported ram, 20 ewes from one to four years old, seven ewe lambs, three yearling rams and nine ram lambs, are of excellent merit and are the right kind.
10 MAMMOTH BRONZE TURKEYS will be sold. Everything must sell, to settle the estate. E. S. Johnson, auctioneer. Write for a catalog to either

Wm. Bennington or Clara E. Bennington, Admrs.
VOLGA - IOWA

Mention The Wisconsin Farmer when writing. All trains will be met at Volga, Elkader and Arlington.

SHORT-HORN CATTLE.

Short-horn Steers Break World's Record

FORTY SHORT-HORN STEERS, weighing 1,692 lbs., bred in North Dakota, fed in South Dakota, topped the Chicago market July 9th at $14 per cwt., averaging $236.88 per head. They were part of a shipment of eighteen loads of Short-horns, 263 head, which sold for $55,025.39, averaging slightly under $210 per head. Market authorities pronounce this performance without a parallel for all time and regardless of breed. **The Short-horn is the breed for you.**
AMERICAN SHORT-HORN BREEDERS' ASSOCIATION 13 Dexter Park Ave., Chicago, Ill.

Do You Hunger for a Home?

1866 CURTIS WOODWORK

"The Permanent Furniture for Your Home"

Doors	Mantels
Windows	Window Seats
Window & Door Frames	Wall Panels
Storm Doors & Windows	Ceiling Beams
Screen Doors & Windows	Mouldings
Stairways	Porch Columns
Newels	Porch Rail
Sideboards	Porch Balusters
Colonnades	Everything in Woodwork
Bookcases	

THEN let us help bridge the pitfalls that lie between your desire and the proud possession of that home.

Your first step is to come to some definite decision as to the size and style of home you want. Right here you will find our Home Books of real service. Send for one—free.

After you have selected your plan you will want to choose your woodwork, the permanent furniture for your home. You want this woodwork to be suited in design to the style of house you build. Here again the Curtis Home Books will help. Look at the illustrations on this page. Notice how the long glass in the front entrance harmonizes with the long panes in the top sash of the windows. In the interior this feeling is maintained, but not monotonously, in the lines of the colonnade, in French doors, and in the trim.

So it is with every house shown in our Home Books. Every detail has been worked out carefully and completely. We have had our minds as much, too, on the ease with which the woodwork, especially in built-in furniture, can be kept clean.

The doors, windows, and other woodwork shown here are only suggestions. The Curtis dealer with his big Curtis catalog, filled with hundreds of designs, can show you other woodwork that goes as well with this style of house.

Yet this wide range of selection in CURTIS Woodwork is offered you without any of the delays and high costs of the special, made-to-order woodwork. They are known as Curtis Standard Designs, and your dealer can always get quick response to an inquiry and prompt shipment of an order. You can always tell CURTIS Woodwork, for every piece, large or small, bears this mark—CURTIS.

Go call on the Curtis dealer. He is our personal representative and will do all in his power and ours to help you build economically, speedily, satisfactorily.

Your Choice of Home Books FREE

For over fifty years we have been furnishing woodwork for the well-planned, better built homes of America.

We have made up three volumes of plans, each book containing about thirty homes. "Better Built Homes," Volume II, contains homes costing $3150 and less. "Better Built Homes," Volume III, contains homes costing $3150 and more. Each home is shown in faithful photographic reproduction with floor plans and suggestions for suitable trim.

With a Curtis Home Book and a Curtis dealer with his big catalog near by, we know of no other way by which the country or small-town builder can get such building service.

Remember your choice of these books is free. Just fill out the coupon and mail it to us today.

THE WISCONSIN FARMER

VOL. XLVI. NO. 46. THURSDAY, NOVEMBER 15, 1917. WHOLE NO. 1868

Report of Wisconsin Milk Commission.

Treats Costs and Distribution Problems and Recommends That the Legislature Investigate Making Distribution a Public Utility.

MILK is so necessary and important a food for all people that its price affects the general welfare of every community. From the standpoint of the consumer every possible effort should be made to reduce its cost to the lowest price compatible with justice to the producer and the distributor. The emergency in which this nation now finds itself has resulted in a widespread feeling that the general welfare must dominate the interests of any individual or class. Therefore, the committee has given primary consideration to this aspect of the problem. Last month the retail price of milk in the Chicago market jumped from ten to thirteen cents. To be warranted in these times, such an increase must rest upon absolutely justifiable grounds.

WISCONSIN'S MILK COMMISSION APPOINTED BY THE GOVERNOR.

Far side of the table, left to right—George Ela, producer, Racine county; L. Hause, producer, Waukesha county; John LeFeber, distributor, Milwaukee; Osmer B. Smith, Milwaukee Council of Defense; Mayor J. A. Fathers, Janesville; Dean E. Davenport, Illinois College of Agriculture; Dean H. L. Russell, Wisconsin College of Agriculture. Front of table, left to right—Mortimer Flack, producer, Walworth county; George Vincent, producer, Kenosha county; John L. Fisher, producer, Rock county; Mayor T. W. Thiessen, Racine.

The problem of finding a selling price for milk is not simply one of ascertaining the cost of production and distribution. That may be the price at which it should sell in order to pay expenses of production and delivery to the consumer, but whether he will take it at that price and how much he will take are entirely different questions.

The price which the consumer can afford to pay depends upon the food value of milk as compared with other staples, and which is far higher than is commonly supposed; it depends upon its peculiar value as food to the young, due to the fact that it contains specific substances that are indispensable to growth.

The price which the consumer will consent to pay depends not only upon its actual value, but also upon his attitude toward the price, and his habits of using milk; indeed, what may be called the psychology of the consumer is one of the large factors in the whole question. The consumer will take some milk at almost any price; he will take much more at a low price. If he calls for more than is produced he will have to economize in its use, and little or no harm will follow; but if he suddenly refuses to take the usual amount, waste ensues and the business is demoralized both for the producer and the distributor. The price at which milk will therefore sell, and sell freely enough for a normal supply to be consumed, is a composite of many elements, and a study of the prices for many years shows that they only roughly follow the cost of production. To determine what it actually costs to produce market milk is so complex a question, and one to which such a variety of honest answers can actually be made, that we have felt that reliance alone on cost data would fail to meet the real object of this investigation. There is no uniform cost at which milk can be made. The manufacture of milk cannot be standardized like the making of automobiles and put on a basis where the costs of production can be made uniform under conditions as they actually obtain. The farmer as a manufacturer is dealing not with inert materials that can be bought and handled as steel and fashioned in a machine, but with a living mechanism that is subject to all the variations of life itself.

Moreover, he has to contend with all of the forces of nature. His crops are subject to the blighting influence of storm and disease, so that his labor, however faithfully performed, may come to naught by reasons over which he has absolutely no control. This hazard factor must be paid for in some way. The costs of his raw materials therefore are subject to the widest possible variations. The silage put up this year by the Wisconsin farmer has cost much more than ever before. In many localities his hay crop has been so reduced that he is confronted with the condition that he must either sell some of his stock or purchase rough feeds at high prices. While the dairyman can and should be able to supplement his rough feeds by the addition of concentrates that will increase the milk flow, he cannot afford to produce milk for any considerable length of time if he is forced to buy coarse feeds at market prices. The concentrated feeds, such as bran, oil meal, and the like, which he is forced to buy in any event, have all advanced greatly in price during the past season and likewise the cost of labor. Not only is the wage $10 to $15 higher per month, but the cost of maintenance has sharply advanced. Under present conditions labor is now so scarce in the country as to make it a serious problem on many dairy farms whether present herds can be maintained without serious reduction in numbers.

The market milk producer is also obliged to incur additional expense to provide a reasonably uniform supply as between winter and summer. This compels him to engage in winter dairying when the

THE MAN IN THE PUBLIC EYE.

After all we must depend upon the farmer for the milk supply and it will pay to treat this producer right.

(Concluded on page 11.)

CURRENT EVENTS

AMERICAN soldiers shed their first blood in the fight for freedom and world-wide democracy, in the European war, last week. In an encounter with the Germans, three American soldiers of General Pershing's forces were killed, five were injured and twelve were captured. The Germans carried on a terrific artillery bombardment of the American trenches for hours and then charged with an overwhelming force, the evident intent being to frighten the American forces and to demoralize them. The American soldiers repulsed them with honor, however, carrying themselves splendidly under fire. The roll of honor of the American dead and wounded in this initial struggle is as follows: Killed—Private Thomas F. Enright; sister, Mrs. Mary Irwin, 6641 Premo street, Pittsburgh, Pa. Private James B. Gresham; mother, Mrs. Alice Dodd, 1001 West Ohio street, Evansville, Ind. Private Merle D. Hay; father, Harry D. Hay, Glidden, Iowa. Wounded—Private John J Smith; brother, F. D. Smith, Ludington, Mich. Private Charles J. Hopkins; brother, James W. Hopkins, Stanton, Tex. Private George L. Box; father, James L. Box, Altus, Okla. Private Homer Givens; father, William F. Givens, Cloverdale, Ala. Private Charles L. Orr; mother, Mrs. Sarah Regnell, Lyons, Kan. The grain-belt boy who was killed, Merle D. Hay, was a farm boy who enlisted at Des Moines, Iowa, less than six months ago. Among the captured are five more boys from the grain belt, as follows: Private Dewey D. Kern; mother, Mrs. Eva Tilton, Collins, Iowa. Corporal Edwin H. Haines; mother, Mrs. Elizabeth Haines, Woodward, Okla. Private Vernon M. Kendall; father, Sam Kendall, Moll, Okla. Private Herschel Godfrey; father, William C. Oberst, 709 Ridgeway avenue, Chicago, Ill. Private Harry Laughman; mother, Mrs. Ada B. Laughman, 461 Oakwood boulevard, Chicago, Ill. The soldiers have now had their baptism of fire and are ready to return the deadly attack in good measure.

THE American troops in France are reported as being eager for another encounter with the Germans, hoping to repulse them this second time with heavy Teutonic loss. Heavy rains have been falling for days, however, so that there has been little opportunity for much more than long-range artillery duels. Dispatches giving the details of the first fight in which the American troops participated state that it opened with a heavy artillery bombardment by the Germans. "Soon after the Germans to the number, according to the report, of 210 rushed through the breaches and wire entanglements on each side of the salient, their general objective barrage in the forefield having lifted for a moment. The Germans went into the trenches at several points. They met with stout resistance. Pistols, grenades, knives and bayonets were freely used. For many minutes there was considerable confusion in the trenches, the Germans stalking the Americans, and the Americans stalking the Germans. In one section of the trench an American private engaged two Germans with the bayonet. That was the last seen of him until after the raid, when a dead American was found on the spot. Another was killed by a blow on the head with a rifle butt from above." The fate of the men who were taken prisoners is not known, but measures are already being taken to send them food and hospital supplies. All the wounded are reported as doing well, although some of the wounds are quite serious.

NOTWITHSTANDING the fact that we are engaged in the greatest war the world has ever known and that American blood is being shed on a foreign shore, President Wilson calls upon the people of America to observe Thanksgiving this year, as usual. In his proclamation, issued last week, he says: "We have been given the opportunity to serve mankind as we once served ourselves in the great day of our declaration of independence, by taking up arms against a tyranny that threatened to master and debase men everywhere and joining with other free peoples in demanding for all nations of the world what we then demanded and obtained for ourselves. In this day of the revelation of our duty not only to defend our own rights as a nation, but to defend also the rights of free men throughout the world, there has been vouchsafed us in full and inspiring measure the resolution and spirit of united action. We have been brought to one mind and purpose. A new vigor of common counsel and common action has been revealed in us. We should especially thank God that in such circumstances, in the midst of the greatest enterprise the spirits of men have ever entered upon, we have, if we but observe a reasonable and practicable economy, abundance with which to supply the needs of those associated with us as well as our own. A new light shines about us. The great duties of a day awaken a new and greater national spirit in us. We shall never again be divided or wonder what stuff we are made of. And while we render thanks for these things let us pray Almighty God that in all humbleness of spirit we may look always to Him for guidance; that we may be kept constant in the spirit and purpose of service; that by His grace our minds may be directed and our hands strengthened; and that in His good time liberty and security and peace and the comradeship of a common justice may be vouchsafed all the nations of the earth."

WOMAN suffrage was victorious in the election in New York last week by an overwhelming vote. New York will be the fourteenth state in the Union to give women the right of ballot and the first state east of the Mississippi river (excepting Illinois, where partial suffrage prevails) to enfranchise women. In the same election John Purroy Mitchel, who has been mayor of New York City for the last four years, was defeated for reëlection by Judge Hylan, the Tammany candidate. Mayor Mitchel is one of the strong men in the democratic party and would have been a formidable candidate for the democratic nomination for president had he been reëlected. On the same day elections were held in Ohio and unless there are discrepancies that are not known at this time or unless the official vote varies to an extreme extent from the unofficial, state-wide prohibition in Ohio has carried by a majority of approximately 1,600. With every county in the state with two exceptions, complete and with a majority of the precincts in these two counted, a lead of 1,601 for prohibition was recorded. The vote with 5,727 precincts out of 5,756 showed 515,972 for prohibition and 514,371 against it.

AMERICANS responded to the call for a second liberty war loan by subscribing $4,617,532,300, an oversubscription, by 54 per cent, of the $3,000,000,000 asked and only $383,000,000 less than the $5,000,000,000 maximum fixed by the treasury. Tabulations completed eleven days after the close of the nation-wide bond selling campaign showed that every federal reserve district exceeded its quota, and 9,400,000 persons subscribed in the big war financing operation, which Secretary McAdoo described as the greatest ever attempted by any government. Half of the oversubscribed sum will be accepted, making the actual total of bonds to be issued $3,808,766,150. Ninety-nine per cent of the subscribers will receive the amount for which they bargained, all subscriptions for $50,000 or less being allotted in full, and those above that amount being pared down in varying proportions, ranging from a 90 per cent allowance on subscriptions between $50,000 and $100,000 to 40 per cent for the largest single subscription of $50,000,000.

AN immediate investigation of charges that coal operators and dealers are not carrying out the orders of the fuel administration fixing prices and governing distribution will be started by the department of justice. Orders have been prepared directing all federal district attorneys to study the fuel administration's regulations and to see that they are enforced. The directions will call for a careful sifting of charges and prosecutions wherever it appears that the law has been violated. Directors of the National Coal Association conferred with Dr. Garfield in an effort to find a solution for the shortage of cars and other transportation problems. Car shortage, Dr. Garfield was told, has cut production during the last ten days by 400,000 tons. The advisability of giving coal shipments priority in certain districts and the necessity for more efficient coöperation between railroads in handling coal shipments and empty cars was discussed. The National Coal Association is organizing a transportation department to assist the government and the railroads in relieving the situation.

THE Italian army was continuing to retreat before the victorious Germans and Austrians at the close of last week. An overwhelming force compelled them to do this, but at last reports they were retreating in order and were not becoming demoralized. It is expected that when they reach a favorable position they will make a stand and attempt to hold the Teuton's back until troops can be rushed to their aid from France and England. At last reports, however, the Germans seemed to be overwhelming the Italians just as they did the Russians. While this is going on the French, English and American troops are holding the western line tight and are even making good ground gains at the expense of the Germans. The manner in which this warfare in northern France is being carried on is well told in this dispatch from the front: "The French advance in pursuit of the Germans beyond the Chemin des Dames has attained an average of a mile and a half, the southern bank of the Ailette being reached everywhere. Altogether about eighteen square miles of territory have fallen into French hands. Many points in the line were bombarded by the German big guns during the French advance, especially in the neighborhood of Ailles, where numerous mustard gas shells somewhat delayed the progress of the French troops. The French are displaying the greatest prudence in their movements in consequence of the frequency of the caverns on all sides of the hills. As a result of this caution the troops, while going forward, discovered a number of traps for the unwary. In Cerny a steel helmet hung on a pole was found on examination to have an electric wire connection running into a mine which would explode in the event of the helmet being snatched away."

AN American mission landed in England last week on the eve of the opening of the first great war conference in which the United States will participate. Col. Edward M. House, President Wilson's personal friend and adviser, is the officially designated representative of the United States. He is accompanied by a staff representing every war agency in the United States, including Admiral Benson, chief of naval operations, and General Bliss, chief of staff of the army. In a statement Secretary Lansing emphasized the fact that this gathering is to be a war conference and nothing else, charged with mapping out a plan of campaign against Germany to "bring the conflict to a speedy and satisfactory end." There have been many indications that the conference was called at the request of the United States. In selecting its representatives, the United States has provided in advance against becoming involved in any discussion of peace terms or political questions. There is no diplomatic representative with the mission. The business at this time of every member of Colonel House's staff is war making and there can be no discussion of any matters not having to do directly with the prosecution of the war.

CASE

Values Impossible Elsewhere

Because Case has been building Steam Engines for over forty years, because its plant covers 140 acres and employs over 4000 skilled mechanics—because of all of this experience and these manufacturing facilities, it is possible for Case to include values in Case Steam Tractors that would be impossible for a lesser organization.

You profit because of these reasons and because of quantity production. You get the best possible Steam Tractor at a reasonable price. You are assured of satisfaction for years to come.

The Case line of Steam Tractors is complete—8 sizes. We have not neglected the development of our Steam Tractors because of the popularity of our Kerosene Tractors. In some parts of the country and for certain uses, men prefer steamers to gas engines.

A pictured description, with specifications, of the complete line of Case Steam Tractors, will be mailed free upon request. Write for your copy today, or for any other information as outlined below. It is all free.

The Wisconsin Farmer

THURSDAY, NOVEMBER 15, 1917.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

The Farmer and the Selective Draft.

I HAVE often expressed the opinion that the drafting of farmers for military service at this time is a mistaken, stupid and shortsighted policy, from the standpoint of national welfare, and a blunder for which we will all pay dearly before this war is over. It seems to me that the greatest obstacle in the way of a clear vision on this matter is that those who are opposed to such exemption start with the theory that a question of patriotism is involved. I have no patience with such an attitude, because it is based on a false assumption. I assume that every class of men in this country is equally patriotic—farmers, day laborers, professional and business men—and that the only thing to be considered is the welfare of the whole nation. I care nothing about the selfish advantage of any class or any individual in this connection; I am thinking only of the broader interests of the nation as a whole, which, I am proud to believe, all are willing and anxious to serve in the best way they can.

Modern warfare is a business proposition, and there are two things which will help the United States prosecute the present war to an early and victorious peace. They are man power in our armies abroad and producing power in our industries at home. The one is just as essential as the other. There is no need to send soldiers to the trenches unless they are supplied with arms, ammunition, clothing and *food*. I emphasize *food*, because it seems to have been somewhat neglected in the calculations of those who were responsible for the draft.

In order to keep history straight in this matter, a few fundamental facts should be remembered. When war was declared almost the first word that went out from Washington to the nation was that America's greatest and most pressing duty was that of feeding the armies and civilian populations of our own country and our allies. A great national campaign, in which federal and state governments joined, was started to encourage increased crop acreages and yields. Conferences of farm publishers with Secretary of Agriculture Houston, with Mr. Hoover and other government officials were held, which resulted in the farm press joining in the propaganda for increased crop production. President Wilson publicly expressed the belief that on the farmers hinged the fate of nations.

Farmers Respondedto Government's Appeal for Larger Crop Acreage.

The result of all this unprecedented propaganda for bigger crops was a largely increased crop acreage, especially in the corn-growing sections of the grain belt. This was done in spite of the fact that for years the farm labor supply had been ridiculously inadequate, and, where one man should have been caring for not more than forty or fifty acres of corn, the average farmer was attempting to handle nearly double that amount. The high wages paid by industrial concerns since the war started had drained the farming sections of a large part of their help, but the farmers of the grain belt figured that by working longer hours (already far too long, in most cases) and by pressing all possible help into service, even at high wages, they would be able to get through somehow and answer the government's call for more food—ever more food.

Then came the selective draft, with the accent on the *selective* feature, which was hailed as a wonderful advance over the draft of civil war days, because it would enable the government to put every man in the place where he would be of most service to the nation, keeping the munition workers and food producers at their work here, while calling for military service the non-producers of the country, who would not be missed at home. Exemption boards were appointed to choose between those who could best serve the needs of the country at home and those who could do their bit most effectively abroad, and the demands of agricultural necessity were included in the grounds for exemption. Up to this point, where theory ended and practice began, all was well and good, and the farmers of the nation went ahead with their work of preparing to harvest the largest crop acreage in the history of the government, which was to be their great contribution to the cause of liberty and democracy in the world.

It was when the boards of exemption began to act that the lie was given to all the propaganda that had been indulged in for increased crop production and the government entered upon the foolish and shortsighted policy which failed to discriminate between the producer and the non-producer, the worker and the loafer, the man who could best serve the country's needs at home and the one who could best serve them abroad.

How the Beautiful Selective Draft Theory Worked Out in Practice.

I will let a New York farmer tell how the selective draft worked out in practice, as stated in a letter to a widely read eastern metropolitan magazine. What he says of conditions in New York are typical of conditions, as I have learned them from a voluminous correspondence with my readers, throughout the grain-belt states. He writes:

I desire to direct your attention to the present procedure of promiscuously drafting farmers for the new Federal army. Last spring, when war was declared almost at the same time as the planting of crops, there was an hysterical panic to increase the agricultural production of the country, varying in its manifestations all the way from the planting of potatoes on the lawns of New York City to the exhortations of the President and his Cabinet to redoubled efforts on the part of the farming element. Even some of the "fire-eating" New York journals suggested that "conscientious objectors" be sent to the farms in lieu of military service. Everyone seemed unhesitatingly to agree that our agricultural interests had the honor of holding the key to the success of our military efforts. However, now that the harvest for 1917 is practically finished, the nation seems completely to have forgotten that another and still larger one will be even more urgently needed a year hence.

The report was persistently circulated at the time of the enactment of the selective draft law that the section on industrial exemptions was prepared primarily for the benefit of the agricultural and munition industries. What the attitude of the draft boards has been in regard to the exemption claims of munition workers is not known to the writer, but he has the best authority for stating that practically no respect is being shown to claims for exemption based on agricultural occupation. In central New York, the region best known to the writer, the claim of a farmer for exemption on the basis of having dependents, or for exemption on the basis of participation in the agricultural industry, not only receives no consideration from the exemption boards, but even subjects the applicants to personal ridicule and humiliation. I have received similar information from other parts of the state and from the Middle West, so it may be assumed that this procedure is somewhat general. The local exemption boards are constituted in the main by residents of cities and villages, and the district boards are almost entirely composed of city dwellers, with the well-known contempt of the townsman for the rural element. This traditional prejudice is allowed to obscure the broader interests of the nation.

Again, the exemption boards take the curious position that the greater the land holdings of the farmer, and, hence, the greater his importance to the agricultural industry, the less valid are his claims to exemption. Young men who are owners or managers of one or more large farms are naively directed by the exemption boards to "rent" their farms. They are not told, however, to whom they are to do the renting. With every available farmer and farm hand strained to the utmost exertion to handle the situation as it now exists, there is no one who can rent a farm without leaving vacant the one which he at present occupies. The specific land represented by every drafted farmer must of necessity be left to indifferent cultivation or be completely idle. There can, thus, be no doubt that unless the shortsightedness of the exemption boards can be curbed in some manner, the agricultural production of the country is bound to be seriously lowered in 1918 by the mere impairment of the working force available. To this must be added the psychological effect of this procedure upon the farmer, who is not so mentally obtuse but that he is able to see the injustice and inconsistency involved in urging him to greater exertion and the next moment proceeding to deprive him of the most indispensable and non-replaceable element in his equipment—MAN POWER—or even to take the farm owner himself, if he happens to be under thirty-one. It is inevitable that the farmers will be discouraged and disgruntled, and in either case will diminish their productive activity.

This procedure of the draft boards would be dangerous, even if the nation had just been enjoying "seven years of plenty;" it is little short of criminal when we are facing a desperate shortage of farm labor, food shortage, and the highest agricultural prices we have had since the Civil War period.

It is not to the point to argue that it is no worse for the farmer to be shot than the clerk. However true this may be from the standpoint of abstract logic or transcendental ethics, it is certainly a most specious argument from the standpoint of national economics in wartime. Nor is there any satisfaction in the thought that the farmer will have his grim revenge in contemplating a starving nation. Such an issue of the problem is too horrible and stupid to consider for a moment. Rather let us hope that the administration will not belie its words with its acts, and let us expect that steps will be taken to urge the farmers to more strenuous and enthusiastic exertions by causing them to feel that the nation regards them as an indispensable element in the war machinery, and not as the lowest and least essential rung in the industrial and military ladder of efficiency.

The theological cast of the administrative mind was evidenced by the section of the draft law exempting clergymen and divinity students. It is to be hoped, however, that Mr. Hoover, able man that he is, is not credited by the administration with the ability to duplicate the feat which Jehovah is credited with having performed for the Children of Israel in the Wilderness, or of that which is traditionally assigned to Elijah in perpetuating the meal and the cruse of oil for the widow of Zarepthah. The photographs of the President's cabinet which appear from time to time in the Sunday papers reveal a secretary of agriculture. Where is his influence directed in the present situation?

New York's Experience Duplicated Throughout the Grain Belt.

What the writer of the above letter has said of New York is equally true of Iowa, Illinois, Wisconsin, Minnesota, Nebraska, the Dakotas, Kansas, Missouri, Oklahoma and other states, where the stupid policy of refusing to exempt farmers will result in decreased yields, wasted crops and abandoned farms. It will be just as effective in diminishing the supply of foodstuffs which America could produce for our army and for our allies as the activities of many German submarines. It has made a mock of all the talk (in which I confess I joined) of increased crop yields, and it has dealt a blow at American military successes, not only this year, but in the pinching years to come, that will be felt as seriously as a shortage of ammunition in the blood-stained trenches of Europe.

I have tried to put myself in the place of those who were responsible for so colossal a blunder and to figure out by what processes of reasoning they have taken men who were producing on the farms of America and left the idlers in the city saloons and town pool halls. No one can take the place of the farmer on his farm, while anyone can take his place on the firing line. So I confess that I cannot understand why such a blow at our national strength was permitted in the house of well-meaning but foolish friends.

Perhaps the silliest apologies or excuses, that are offered in this connection, are those of idle theorists and irresponsible publicists, whose knowledge of farming conditions is limited to automobile trips through the country, who now and then arise sagely to remark that the farmer can rent his farm to someone else if he has to go to the army, or can hire some of the town loafers left behind, if his hired help is taken away. It is hard for anyone who knows farming conditions in the Central West to be patient with such silly suggestions. Renters are not hanging around looking for farms these days, and modern farming is a very specialized form of work. It requires brains and experience, as well as strength and brawn, to be successfully carried on. A green farm hand can do more damage with a team of horses or a tractor in an hour's time than he could make up by a year's work, and the average inexperienced youth of our cities and towns would be more of a nuisance on the farm than he was worth, even if it were possible to compel him to work, which it is often not. It would be just as practical to say that the farmer should run the doctor's office, while the latter was away, as to suggest that the farm work could be done by inexperienced and unskilled help.

Calling of Farmers for Military Service a Shortsighted Policy.

I might prove all the statements which I have made above by hundreds of letters, which I have received from farmers all over the grain belt, each telling its story of official folly on the part of those who are directing the nation's destinies in this critical hour, and from time to time I shall do so in these columns, using specific cases to demonstrate

THE WISCONSIN FARMER, Madison, Wisconsin

Winter Program for Wisconsin Institutes.

Farmers' institutes are being arranged for now by numerous counties. The program has not been completed as yet, but a tentative list of dates has been given out by E. L. Luther, superintendent of farmers' institutes, for the first and second weeks in December. All localities desiring institutes for their neighborhood must send in their petition to Mr. Luther at an early day. Institutes are of course arranged along certain routes to prevent unnecessary crossing and re-crossing of territory. The dates thus far worked out are: December 4th and 5th, Washburn, Wilson, Stockholm, Springbrook, Farmington and Grantsburg; December 6th and 7th, Bayfield, Baldwin, Waumandee, Hayward, Centuria and Danbury; December 11th and 12th, Mountain, Zachow, Dunbar, Klondike, Maribel and Wolf Creek; December 13th and 14th, Gillette, Cecil, Pembine, Lena, Rosiere and Evergreen.

It is very difficult for the department in charge of the institutes to promise an institute at a later date, as it often means a rearrangement of the entire schedule of future weeks.

Accounting Systems for Wisconsin Farmers.

Wisconsin cow-testing associations, having 2,500 members, are in position to show the values of farm bookkeeping and good business methods.

That these groups of farmers should put in systems of farm accounts if for no other reason than to let more people see the good they can do is what O. A. Juve, college of agriculture, University of Wisconsin, thinks should be given a trial as soon as possible.

The first step in giving the plan a trial would be for the cow-testing association members to meet and select some standard set of forms for general use. The method of keeping entries of the different deals taking place on the average dairy farm could then be explained by an authority. If possible, looking after the accounts and the work of keeping up interest among the members by giving suggestions or explaining problems as they occur might rest with the association's official tester. Many of these field men have some spare time to give to this important thing in their business—a thing, it is pointed out, which goes hand in hand with milk sheets and feed records as a vital index of conditions. Most testers would be glad to see the association business thus placed on a sound nd sane footing in all particulars.

Even should it be found impossible for the tester to direct the farm accounting within the circle, the hiring of an extra man, on full or part time, would in the end be profitable for the association. To show the sense of taking such a step, if found necessary, Mr. Juve points out that a modest salary paid to an accountant would mean far less spent in business administration than the ordinary commercial house deems absolutely necessary to success.

"For instance, suppose the bookkeeper could be obtained for $1,000 to $1,200 a year—this sum would represent only a small per cent of the total capital investment which the average Wisconsin cow-testing association has," said Mr. Juve, "showing the sum of $300,000 is easily a safe average to credit to such organizations, numbering from twenty to twenty-six members, many of them having modern barn equipment and milking purebred or high-grade cattle."

To produce the greatest, to save the most and to stop all small leaks is the goal sought in this work, and it is the foundation of Wisconsin cow testing. Some day, at no distant time, either, these farm bookkeeping circles will be formed and soon become a fixed part of the business—a needed side line to the "banishing of Badger boarders," the gentle operation which is now separating so many cow swindlers from the public feed trough.

Suggestions relative to trying out this scheme for advancing farm accounting into its true position through the state will be gladly received by Mr. Juve. Criticism and discussion are welcome.

President Wilson's Thanksgiving Proclamation.

IT HAS long been the honored custom of our people to turn in the fruitful autumn of the year in praise and thanksgiving to Almighty God for his blessings and mercies to us as a nation. That custom we can follow now even in the midst of the tragedy of a world shaken by war, an immeasurable disaster, in the midst of sorrow and great peril, because even amidst the darkness that has gathered about us, we can see the great blessings God has bestowed upon us, blessings that are better than mere peace of mind and prosperity of enterprise.

We have been given the opportunity to serve mankind as we once served ourselves in the great day of our Declaration of Independence, by taking up arms against a tyranny that threatened to master and debase men everywhere and joining with other free peoples in demanding for all the nations of the world what we then demanded and obtained for ourselves. In this day of the revelation of our duty not only to defend our own rights as a nation, but to defend also the rights of free men throughout the world, there has been vouchsafed us in full and inspiring measure the resolution and spirit of united action. We have been brought to one mind and purpose. A new vigor of common counsel and common action has been revealed in us. We should especially thank God that in such circumstances, in the midst of the greatest enterprise the spirits of men have ever entered upon, we have, if we but observe a reasonable and practicable economy, abundance with which to supply the needs of those associated with us as well as our own. A new light shines about us. The great duties of a day awaken a new and greater national spirit in us. We shall never again be divided or wonder what stuff we are made of.

And while we render thanks for these things let us pray Almighty God that in all humbleness of spirit we may look always to Him for guidance; that we may be kept constant in the spirit and purpose of service; that by His grace our minds may be directed and our hand strengthened; and that in His good time liberty and security and peace and the comradeship of a common justice may be vouchsafed all the nations of the earth.

Wherefore, I, Woodrow Wilson, president of the United States of America, do hereby designate Thursday, the twenty-ninth day of November next, as a day of thanksgiving and prayer, and invite the people throughout the land to cease upon that day from their ordinary occupations and in their several homes and places of worship to render thanks to God, the great ruler of nations.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done in the District of Columbia, this seventh day of November, in the year of our Lord, one thousand nine hundred and seventeen, and of the independence of the United States the one hundred forty-second.

WOODROW WILSON.

By the President:

Robert Lansing, Secretary of State.

Production and Price Uniformity for Potatoes.

Fall prices for potatoes in Wisconsin have been ranging from 80 cents to $1 per bushel in bulk. When so sold they give the farmer a fair return for his crop, as he is relieved of all further risks from frost or a breaking market.

The majority of our farmers are not in a position to put their entire time to hauling potatoes to market. Nor would it be well for them to do so. There are many other things to be attended to which require attention. The Department of Agriculture, however, calls attention to a very important point to be considered by those having potatoes on hand. According to Commissioner Norgord our tremendous crop of potatoes not only in Wisconsin, but in the United States, is bound to cause low prices unless the marketing of the crop is done more uniformly steady than has been the case in former years.

The normal crop for the United States in potatoes is around 350,000,000 bushels. Whenever the yield of our country exceeds this figure prices are apt to break either in the spring or fall, but particularly in the spring. The accompanying table shows this to be true with great regularity. In 1909 it will be seen a yield of nearly 400,000,000 bushels was harvested. Fall prices ranged from 20 cents to 58 cents per bushel and dropped in the spring to a range of 16 cents to 34 cents per bushel. The same was true in 1912, when the price dropped from 40 cents to 33 cents from fall to spring. The 1917 crop for the United States has been estimated at about 425,000,000 bushels after deducting all losses for frost and field rotting. The crop for Wisconsin is estimated at better than 35,000,000 bushels

	Chicago cash price per bushel, fair to fancy			
			Following	
Production Bushels	December Low	December High	May Low	May High
	1909			
389,195,000	20c	58c	16c	34c
	1910			
349,032,000	20	48	35	75
	1911			
292,737,000	70	100	90	200
	1912			
420,647,000	40	65	33	70
	1913			
331,525,000	50	70	60	90
	1914			
409,921,000	30	66	34	150
	1915			
359,721,000	53	95	80	110
	1916			
285,437,000	125	190		

The remedy for this depression of prices occurring either in the fall or during the spring months lies in the rearrangement of marketing practices. The farmer is entitled to use his own judgment of selling now or waiting for a bigger price in the spring. However, it is evident that the abnormally large supply of potatoes will force prices down sooner or later unless the present war situation, the demand of the American soldiers and of our allies, the shortage of wheat and the agitation for the consumption of more potatoes by the American households, can absorb this oversupply.

If the stream of potatoes going to market is fairly divided between fall and spring there is a chance of prices remaining stable. If too many potatoes are held in storage to be dumped upon the market in the spring the surplus will be too large to be absorbed and the price will drop. If a fair percentage of the potato crop is marketed this fall and the remainder stored over winter until spring perhaps this oversupply at one or the other season could be avoided. Prices would tend to remain uniform in accordance with the supply, which would then be uniform.

For the marketing of potatoes this fall there is some necessity of immediate action on the part of the growers. Cold weather will soon set in and make it impossible to haul potatoes to market. The shipping season usually closes down about the beginning or middle of December. Buyers become cautious lest the product they bought be frozen. They are not able to detect this until the potato has been in the storehouse for some time. Experience has taught them to be careful at certain seasons of the year in order to avoid large losses of this kind.

There is some advantage also for the grower if he can dispose of his crop at a fair price during the fall. He has then no longer the risk of storing the crop and he does not suffer the losses from accidents, frost or evaporation. The spring price for potatoes may or may not be better than the fall price, but in either case it is only wisdom to realize a small profit from part of the crop, rather than risk all in the hope of receiving unheard-of prices which rarely if ever materialize

About fifty to sixty-five per cent of the potato crop sold this fall with the balance kept in storage for next spring would be a fair proportioning of the year's harvest.

Soil Enriched by Keeping Dairy Cows.

One of our subscribers brings up the question of soil fertility and its maintenance in its relation to the main industry of the farm. He points out especially the change that is effected in soil productiveness on farms where dairy cows are kept. His letter follows:

Dairying is a constructive line of agriculture. Scarcely has there been a farm devoted to dairying which has not had its productiveness increased. In a certain corn-belt community notable for its poor soil and run-down farms there is one man who is securing fifteen tons of silage per acre. He is not only able to grow alfalfa while his neighbors believe it impossible, but is harvesting very handsome yields. Upon investigating the reason for the success of this man the answer was found to be very simple. The whole thing had been accomplished by twelve years of dairying. In the beginning the soil of the farm was no more productive than the other farms of the community. The return of manure to the field, the use of alfalfa and clover for hay and the pasturing of parts of the fields had accomplished very marked results.

Any good system of dairying will return more fertility to the fields than is taken from the soil. This is because there is scarcely a dairy that does not purchase some feed either concentrate or roughage and because the amount of fertility sold off in butter is very little and even in whole milk the fertility removed from the farm is conceivably small. Such is the case with special reference to chemical elements that go to make up fertility.

Humus, which is decayed and decaying vegetable matter, in the soil is greatly increased by dairy farming. In the manure this humus is returned to the fields in great abundance. Humus is very necessary to the soil. A field might have all the mineral elements of fertility in great abundance, yet were there no humus no production would be possible. The addition of humus to the soil has changed many a farm from the unproductive to the productive and profitable class. With dairying there is made available large amounts of manure which go to in-

crease the fertility and productiveness of the farm. In one of our western states where fruit growing is conducted on a very intensive scale and where land sells for as much at $1,000 per acre part of the farms of more progressive men is devoted to dairying in order that the fertility shall be kept up to a high state.

Those who contemplate entering the dairy business do well to consider the possibility of keeping up or increasing the fertility of the farm thereby. To many readers of your paper the matter of keeping up fertility is a new feature the necessity of which has not been made extremely apparent. Yet just as surely as farmers in eastern states have been forced to pay very careful attention to keeping up fertility and have spent large amounts of money in so doing so must our corn-belt farmers finally adopt some policy of keeping up the farm fertility. The forehanded man on our rich prairie soils will do well to consider this feature of the dairy business. Keeping up the fertility is a by-product of the dairy business yet it is worth hundreds and thousands of dollars to the dairy farms of our land. Those who stay in the dairy business regardless of the present strenuous conditions will in the future have a more fertile farm. Dairying is to be recommended for the great work that it does in keeping up soil fertility.

We have passed through a period during the last few months when there seems to be little direct profit in handling dairy cows and those who are apt to become discouraged over the matter should bear in mind some of the things pointed out by this subscriber. The gradual enrichment of the soil brought about by the restoration of fertility and the addition of humus-making material means greater production in years that follow, so that profits that may not appear to be immediately in sight are, after all, available, providing one will stay in the business so as to reap the benefit of soil enrichment.

Care of the Idle Tractor.

It is estimated that some 55,000 tractors passed into the hands of farmers in 1917. In most cases it was the first investment ever made by the purchaser in this form of power. As a result, much must be learned about the mode of operation and also about the care of the tractor when it is idle. On this point Power Farming comments as follows in a recent issue:

Usually when one buys an automobile his first thought is to have it properly housed. So the minute the ownership of a new machine is a certainty, up goes some sort of a shelter for it; usually a rather pretentious building as such buildings go. And so a moderate-priced machine may have caused another investment of well up to half its cost for suitable housing.

And that is all right! But what about the tractor? One can get a pretty desirable automobile for the cost of even a moderate size tractor; but does the tractor get the housing? Sometimes it does. More often it is run into any old kind of a shed; not infrequently it is left in the open to take care of itself

And yet a tractor will depreciate for lack of good shelter just as rapidly as an automobile. While the tractor has not the satin finish in its painted spots that an automobile has, it is just as highly developed a piece of mechanism, it needs just as much careful attention as the automobile does, and it should be kept in a well-lighted, roomy garage, with a cement floor. It is not only easy but pleasant work taking care of a machine when it is stored in a comfortable place to work in. The reverse is true in any other kind of a shelter, and the result is that the machine is allowed to wear out and deteriorate much faster because of the inconvenience of giving it attention than would be the case if it were properly housed.

We have already seen enough tractors standing in the field or in the yards about the buildings to convince us that there is need of agitation along this particular line. Though constructed mostly of steel parts, it must be remembered that the elements act as effectively in working destruction through the medium of rust as is ordinarily the case in destroying wood by rot. It is shortsightedness to invest in a tractor unless one is prepared to get service out of it ranging anywhere from seven to fifteen years, and this cannot be done if it stands outside month after month.

The United States Department of Agriculture experts have estimated that the war gardens of the United States have added more than $100,000,000 to the country's wealth. They at least have acquainted many with gardening and outdoor life who did not appreciate either before.

THE HOME GUARD PREPARES FOR RENEWED ACTIVITY

Official Statement—Indications today were for increased artillery action on the home guard front. General Hi. Costof Living's forces were expected to bear the brunt of the attack, with heavy losses in the rabbit division. This division is noted for its rapid retirements and the fact that it never surrenders. The morale of the home guard forces is said to be excellent and they are anxious to get into action.

BADGER FARMER'S MAIL BAG
FARM EXPERIENCES

Likes His Truck for Farm Use.

To the Editor:—I have used an automobile truck for the last six years and now find it to be practically a necessity in my farm work. I am able to use this truck practically the whole year round, but as I have also a team I find it more economical to use the horses at such times of the year when the roads are very bad either on account of snow or mud. It is usually the case that at such time of the year the horses are not busy and they need a little exercise anyway and it saves considerable wear and tear on the car to use them. I am now using a two-cylinder, one-ton truck and I am able to utilize it for all manner of hauling. A big part of my work is hauling fruit, but I have also hauled hogs and heifers in the truck. I find also that in returning from town there is always something to bring back as feed, building material, cement, etc. My truck also comes in handy for attending a picnic, fishing trip, or family reunions, as you can take a big load of truck along. I have carried as many as eighteen or twenty persons in my truck. If I had it to do over again and were buying a new truck I should get a car with more horse power. I would say this, that a farmer who has a truck should learn how to do repair work himself. This saves a considerable expense besides lengthening the life of his car. A. K. Bassett.
Sauk Co., Wisconsin.

FINDS TRUCK A PROFITABLE INVESTMENT FOR HIS FARM.

Mostly Dairying in Waushara County.

To the Editor:—This section of the country is not run very heavily with hogs just now and there are not a very great number of steers. Unfortunately the past three years the corn crop has been very light and the number of hogs around here is only about half of what it used to be, owing to the high price of grain and the shortage of the corn crop. We are depending now largely upon the dairy business and are attending to raising all our heifer calves and keep just enough hogs to eat up the skim milk and whey. Mostly ground oats and corn are used in the tankage. We have not done any hogging down corn in this neighborhood, but our corn is cut, shocked and husked and we use the stalks for feed, sometimes feeding them whole and again running them through the feed cutter. We feed the corn on the cob to hogs. Of course, a very large number of our farmers have silos and they put in their corn for winter feed of their dairy herd.
Henry T. Olson.
Waushara Co., Wisconsin.

Winter and Spring Wheat.

To the Editor:—I did not raise any winter wheat this last year, though I have had considerable experience with it in former years. I think the best crop can be gotten on clover. Plow the field right after the hay is off, then go over with the harrow twice or oftener, then leave the field until the last week in August and then work it up with a harrow and then sow one and a half bushels to the acre, and this will cover the ground nicely and will not be easily winter or frost killed. I raised this year spring wheat which went twenty-eight bushels to the acre, machine measure; by weight I think it would be three or four bushels more. I had a field of winterkilled alfalfa and manured and plowed it for corn. Clover sod would have been almost as good. I got a good crop of corn on this piece last fall and then plowed it in the fall. This last fall I went over it twice with the harrow and sowed one and a half bushels to the acre the first week in April. I got the above results. It takes a very good stand of winter wheat to beat it, and you don't need to be afraid of winterkilling. A. G. Oelke.
Green Lake Co., Wisconsin.

[Editor's Note.—Mr. Oelke says if any of our readers know a better way to raise wheat he would like them to tell it through the Mail Bag Department of The Wisconsin Farmer.]

Believes in More Hogs.

To the Editor:—It seems to me that there are a good many farmers in this part of the state who have not studied hog raising or feeding, especially feeding, but who have been inclined to fall in with the general plan of growing potatoes and raising cattle. Too few of our farmers have arrangements for hogs, although they are slowly beginning to realize that great profits can be made from hogs if they are properly handled. We are firm believers in having good hogs on a Wisconsin farm. Chas. E. Constance.
Waupaca Co., Wisconsin.

Don't Feed the Hogs too Much.

To the Editor:—I am a farmer born in the Grand Duchy de Luxemberg, Europe, and give you my view about feeding hogs. It will be a hard proposition to have heavier hogs this year with the soft corn we have, but at the same time I did not have any corn for the last three years that is matured corn. I think tankage at $90 a ton is too much money to invest and it will not pay. I had thirty-five old hogs on my farm during this summer and nothing but a good clover pasture to give them. I sent them to Chicago last Monday. They averaged 300 pounds and sold for $16.75 per hundred. I swilled them and fed them soft corn. I think regular feed, good care and a clean sleeping place are the main things about raising hogs. I think the man who has the help does better to not turn hogs in the corn and save the stalks. I would recommend anyone feeding young hogs to swill them and have good judgment about the corn given them, not to give more than they can eat. Give a good, clean sleeping place, plenty of salt and ashes and cut out all the tankage. However, I do not include oil meal in this. I have 135 shoats and I am not afraid but what I will have a good weight on them. Mike Mergen.
Grant Co., Wisconsin.

MEAT ON THE FARM

A PULLEY SHOULD BE USED IN HANDLING THE HEAVY HOGS

SAUSAGE MAKING AN IMPORTANT ITEM AT PIG KILLIN' TIME.

IN THE patriotic effort to conserve and increase the meat supply of the nation, there is a way in which the farmer can render valuable assistance and at the same time derive a decided benefit for himself. It consists in preparing the meat needed for his own use right out on the farm. By this plan he eliminates extra feeding and shrinkage entailed in marketing, he saves the extra work of hauling his animals to the packers and bringing the meat back to his farm, and without doubt he gets a much better quality of meat for his household at smaller cost. For these reasons farm butchering may be urgently advocated, especially this year when every economy in the use and handling of foodstuffs is of vital importance.

In most cases the slaughter of cattle is impractical on the farm unless several neighbors work together and each takes a share of the carcass, because the average farm does not have facilities for storing fresh beef. But practically every farmer can butcher a few hogs and cure the meat with such equipment as he already has on hand. Well-cured pork will keep for a long time, on some farms it is kept from one butchering to the next, and its flavor is even better than that of the fresh product. The tools and other equipment necessary for butchering and curing pork need not be elaborate. A six or seven-inch curved knife for skinning, a good butcher knife or six-inch sticking knife, a candlestick hog scraper, an ax or cleaver, a meat saw, a gambrel for hanging the animal by its hind legs, a twenty-gallon iron kettle for heating water and a scalding barrel make up the list. For convenience in scraping and cleaning the carcass a low table or platform like that shown in the drawing will be found desirable. The scalding barrel is leaned against the table or platform, so that the hog may be pulled onto the table easily after it has been scalded. A hook can be put in the animal's snout and one man can drag it onto the table. All of the equipment should be arranged as compactly as possible. For instance, if the water is heated in the iron kettle over an open fire near the scalding barrel, it will not have to be carried far and will have little chance to cool before it is used.

The first step preliminary to slaughtering consists in selecting animals that are in good health. It is not economy to butcher diseased or weakened animals, because the meat from them may cause serious sickness and the risk is not worth taking, no matter how high the price of pork soars. The next step is to withhold feed from the animals for from twenty-four to thirty-six hours. Perhaps the best way is to confine them in a comfortable pen with plenty of fresh water available. An animal allowed to rest and remain quiet under such conditions will make a much better colored and more attractive carcass than one which can move about and feed. Withholding feed empties the digestive tract and prevents danger of fermentation setting in at the time of killing. Keeping the animals quiet prevents a rise in body temperature and prevents a tendency toward souring of the meat, which sometimes occurs during the curing process.

A hog may be killed by sticking or shooting. Those who have had no previous experience may prefer to shoot the animal, using a .22 rifle. Sticking, however, is not difficult for two men if one will hold the hog while the other uses the knife, and it has the advantage of causing the animal to bleed more freely. In sticking the hog, let one man reach under the animal and grasp the fore and hind legs on the far side, then quickly turn the animal over onto its back and hold it there by the fore feet while the other man forces back the snout with one hand and uses the knife with the other. The knife should be thrust into the animal's throat just above the breast bone with the sharp edge upward and the point directed toward the root of the tail. A twist of the blade to the left cuts the arteries just inside the breast bone. Care should be taken to insert the knife straight or the shoulder cuts will be injured.

After the hog has bled thoroughly, it is dipped head upward into the scalding barrel. The scalding barrel should be filled about one-third full of water heated to a temperature of about 185 or 195 degrees Fahrenheit; if hotter than this the hair will set and cannot be easily removed, while if colder it will take much more time than necessary to do the scalding. Since a thermometer is not usually available, the right temperature may be reached by heating the water to very near the boiling point, then pouring it into the barrel and letting stand for a few seconds. When the temperature is right, from one-half to three-quarters of a minute should be sufficient time to loosen all the hair. Be sure to scald all parts uniformly. A shovelful of ashes or a tablespoonful of lye in the water will loosen dirt and scurf on the skin.

When scalding is finished, lift the carcass out of the barrel onto the scraping platform; then scrape off the hair from the feet and head first, since these parts are the hardest to clean. If the hair or scurf cannot be removed easily from any part, gunnysacks may be applied and hot water poured over them. Occasionally this method is employed to scald the whole hog. After the skin is well scraped, it is soaked with hot water and shaved with a sharp knife in order to remove all traces of hair and dirt.

The next step is to hang the carcass up. If the work is done in a shed it may be suspended from a rafter or beam, and if outdoors from the limb of a tree. A gambrel made of an old wagon singletree works splendidly if the ends are sharpened so that they may be inserted under the tendons of the hind legs of the carcass just below the hocks. If the rope from which the gambrel is suspended runs over a pulley, the carcass can be raised or lowered to any desired height, which is very convenient in dressing and cleaning. After hanging the carcass, wash it well and shave away any dirt that was missed in scraping. To remove the entrails, split directly through the joint between the hind legs with a butcher knife and cut down the belly line, taking care not to penetrate too deeply and thereby open the stomach or intestines. In cutting direct the left hand over the back of the knife blade and hold the sides of the blade with the first two fingers, so that the point cannot sink below the desired depth.

After the carcass has been opened, loosen the rectum and pull downward toward the stomach and intestines. Then pull up the gullet through the diaphragm and remove all the loose parts together, cutting the supporting tissues whenever necessary. Next, cut the breast bone with an ax or cleaver, just a little to one side of the middle, and remove the pluck, which consists of the heart, lungs, windpipe and liver. The gall bladder attached to the liver contains an offensive greenish fluid and must be cut away carefully without spilling this fluid on the meat. The carcass is now ready to cool for from twelve to eighteen hours. The best temperature for this is between 34 and 40 degrees, but a lower temperature must be avoided. If the hog's mouth is pried open with a block of wood the circulation of air and drainage of blood will be improved. Sometimes in hot weather the head is cut off just back of the ears and the backbone split with an ax or cleaver so that cooling will be more rapid. The gut fat attached to the intestines must be removed before it cools. Be sure to keep it separate from the leaf and back fat, since it has a strong flavor.

When the carcass has cooled thoroughly, lay it on a cutting table or block and remove the head and split the back if these operations have not already been done. Then cut through the carcass between the fourth and fifth ribs and remove the shoulders. These parts should be trimmed up carefully to the shape shown in Figure 1. The neck and rib bones are both removed in trimming and also all flesh down to the top of the shoulder blade. The lean trimmings should be placed in a convenient vessel and saved for sausage, while the fat is saved for lard. To remove the foot from the shoulder, cut the tissues apart just above the knee joint. Next remove the hams from the middle by making a diagonal cut beginning at each flank and extending toward the root of the tail, passing about two inches in front of the hip bones. Figure 2 shows this cut, while Figure 3 shows how the ham is trimmed up and the cut made just above the hock to remove the foot.

When this is done, remove the leaf fat from the middle piece and cut away the spareribs, leaving as much lean meat as possible with the

bacon and back strips. This improves the quality of the bacon. Now separate the bacon strip from the back strip by making a cut parallel with the backbone, so that one-third of the total side strip is left for the loin and fatback, while two-thirds is cut off for bacon. This, of course, is done on each side of the backbone. Trim the bacon strip to the shape shown in Figure 4, b, and separate the lean meat from the fat on the back strip, saving the lean meat for chops and roasts and the fat for lard.

The tongue is removed from the head by cutting the muscles at its base and pulling it loose with a sharp upward jerk. After this is done, remove the brain, ears, skin and snout and cut the head into quarters. The snout and ears may be saved and pickled with the feet. Then soak the meat left on the head in cold water over night to remove dirt and cut up finely to be made into head cheese.

When the various cuts are trimmed up properly, there is considerable lean meat left over in the trimmings that must be saved by making sausage. In fact, sausage making is a very important part of butchering. The procedure consists in taking three pounds of lean meat trimmings to every pound of fat, mixing thoroughly by chopping or running through a meat grinder and seasoning. To season, spread the mixture out on a flat surface and add one ounce of pure fine salt, one-half ounce of ground black pepper and one-half ounce of pure leaf sage, rubbed fine, for each four pounds of meat. Work the seasoning in well by grinding or chopping. Sometimes a little lean beef added to sausage improves its flavor. Since sausage usually is made in considerable quantities, pro-

Fig. 1—Pork shoulders: Untrimmed and trimmed with trimmings.

vision must be made for storing it. The most common method is to fry it down well and pack in air-tight jars or muslin bags that are made air tight by rubbing well with melted lard. Sausage packed in the muslin bags and then smoked for four or five hours takes on a very desirable flavor.

Next comes lard making. First, cut up all fat meat, except gut fat, into small pieces about one and one-half inches square and remove all the attached lean meat possible. Put the squares into a kettle containing a little water and cook slowly with frequent stirring. The water prevents burning, which would injure the flavor of the lard. When the cracklings or bits of lean meat turn brown and come

Fig. 2—Carcass of pork: Head, shoulders, middle, hams.

to the surface the lard is cooked. At this point, remove the kettle from the fire, let stand for a short time and then strain the melted lard through a muslin cloth into a large jar. If the lard is stirred while it is cooling, it will become smoother and whiter.

In order to keep the hams, shoulders and bacon strips until ready for use they must be cured. For farm conditions the brine cure has given best results. The dry cure takes a longer time, requires considerable labor at regular intervals in rubbing in the curing materials, demands more favorable conditions of temperature and moisture and gives less protection from insects and vermin. Therefore, only the brine method will be outlined here. The brine consists of eight pounds of common salt, two pounds of brown sugar and two ounces of saltpeter dissolved in four gallons of water. These proportions will cure

Fig. 3—Hams: (a) Untrimmed; (b) trimmed.

100 pounds of meat. In warm weather the mixture will have to be boiled in order to make it keep well, and if at any time it becomes ropy, the meat should be taken out and the brine boiled again. Before putting the meat in the brine, rub each piece thoroughly with salt and let stand over night. Then pack in a water-tight barrel, placing the hams and shoulders in the bottom with the skin side against the sides and bottom of the barrel and the bacon strips on top. Put a heavy weight on the meat to hold it down and then pour on the brine. The bacon strips should remain in the brine from four to six weeks and the hams and shoulders from six to eight weeks.

When the curing is finished, the meat is ready to be soaked. Smoking aids in preserving it and adds to its flavor. A smokehouse is the best place for this process, but oftentimes large boxes give first-rate results. The only requirement is that the boxes shall be large enough so that the meat may be suspended seven or eight feet from the fire to keep it from getting discolored. It is a good plan to hang the meat on pieces of No. 9 wire so that no two pieces can touch. Hickory wood makes the best fire for smoking because it gives a particularly good flavor to the meat, but any hard woods, such as maple or walnut, may be used, and some farmers re-

Fig. 4—Sides of pork: (a) Loin; (b) fatback; (c) spareribs; (d) bacon strip; (e) trimmings; (f) leaf.

port entirely satisfactory results with corncob fires. The fire should not flame up, but rather smolder in the nature of a smudge.

You Get *More* Than Just the Battery

Our business is more than making and selling batteries. It's maintaining a continuous personal interest in you and your battery. Helping in every way we can to assure you of reliable starting, lighting and ignition.

We show you how to take care of your battery and help you do it. This keeps it on the job, and the battery keeps your car on the job.

When repairs or recharging must be done, we tell you where to have them done by reliable battery experts, who will provide you with a rental battery so that your car is not laid up.

When at last you need a new battery, we can supply you with the newest and finest Willard product—the Still Better Willard with Threaded Rubber Insulation.

This is more than battery service—it's insurance of car use.

Write for booklet on battery care, A-3, and list of Willard Service Stations.

my points. But here I merely wish to say, in a general way, that by just so much as the crops have been and will be cut down through the drafting of farmers for military service, by just that much has America's effectiveness in winning the war been diminished and just that much has been added to the useless load of the nation.

A wise man is one who learns by the experience of others, without having to pay the cost for such wisdom himself, yet the United States stubbornly refuses to learn from bitter English experience in the matter of food production. At the beginning of the war, when the business of war was new and it was men that were needed most to stop the onrushing German armies, voluntary enlistments in England resulted in tremendously depleting the farm labor supply, and it required the passing of one crop season to demonstrate the folly of such misplaced patriotism. Food production soon became as serious a question as soldier and ammunition production. Immediately England saw the error of her way and began withdrawing from military service men trained in agriculture. Directly production began to increase, and in 1917 England's crop acreage was 3,000,000 acres larger than in 1915. The same policy has been pursued in Canada, and the king's proclamation, establishing a real *selective* draft, is frankly based on agricultural necessity, in its preamble, which reads:

Whereas, By reason of the large number of men who have already left agricultural and industrial pursuits in our Dominion of Canada in order to join our expeditionary force as volunteers, and by reason of the necessity of maintaining under these conditions the productiveness or output of agriculture and industry in our said dominion, etc.

Who can doubt what the British and French food situation would have been today, had it not been that these governments have learned the lessons of experience in exempting farmers from military service! Their condition is bad enough at best, which adds to the burden which America must bear in furnishing them as well as our own people with foodstuffs, but excepting for the change in policy which they adopted they would now be hopelessly out of the war, while America faced the triumphant German armies alone. Let us learn from their experience instead of buying it for ourselves with American lives and misfortunes, when it may perhaps be too late.

Welfare of the Whole Nation the Only Thing Worthy Consideration.

Again I repeat that I am not asking for any special consideration for the farmer, as a class or as an individual, on sentimental or selfish grounds. He is no more entitled to consideration on those grounds than the business man or the day laborer. But what I am considering is the stern duty of winning this war; I am thinking only of the nation's interest; I am pleading only for the greatest good of the greatest number—for the army at the front and the families they leave behind—for our allies as well as for ourselves. It is when I think of these higher considerations; when I consider that it is going to take bread as well as bullets to win this war; when I realize that any man will make as good a soldier as the farmer, while no man can take his place on the farm, that I want to raise my voice in protest at thus crippling one of our chief sources of strength against the common enemy by the mistaken course we have pursued.

If the time should ever come when all the non-producers of the country, who either cannot or will not be of service at home, have been called to the colors, and more man power is needed in our armies, I shall be the last to raise my voice against calling on the farmers for military service. I believe that should that time come, the farmers of the nation will respond without being drafted, even as did the embattled farmers at Lexington, New Orleans, Appomattox Court House and San Juan Hill. Patriotism burns just as hotly in the breasts of American farmers today as it has in those other hours of national peril. They always have and they always will follow their chosen leaders in defense of our flag and our American ideals. But the important thing now, from the purely cold-blooded, business standpoint of modern warfare (for it is both cold-blooded and businesslike, if it succeeds) is that our leaders shall possess greater wisdom to direct the farmer's willing efforts along the most effective lines of national welfare. I pray that this increased wisdom may be granted before we blunder further to our cost.

LOANS FROM LAND BANKS.

I AM advised that on the first of October (almost six weeks ago) the four federal land banks here in the grain belt had actually approved loans, and furnished farmers the actual money, to the extent of $23,246,580. The manner in which this was divided between the four grain-belt land banks is as follows:

Wichita bank..	$8,643,245	Omaha bank. ..	$3,976,490
St. Paul bank..	7,423,600	St Louis bank.	3,203,245

The total amount of loans approved for the entire country, at that time, was $64,063,604. It will thus be seen that two-fifths of the patronage of Uncle Sam's new banks comes from the Middle West, the center of agricultural production.

These figures verify the statement I made a few weeks ago, that the new banks were taking up 4 or 4½ per cent of the existing farm mortgages. The farm-mortgage indebtedness of the ten grain belt states, at the last federal census, was $898,480,286. The new land banks have already actually loaned 3 per cent of this immense total, while applications for an equally large amount are still pending, to be examined and the loans actually made as time will permit.

I want to impress this one thing upon my readers: there is considerable red tape to the new law and it takes time to get loans. Most farm notes and mortgages are renewable or payable the first of March. It is not too early to begin organizing farm loan associations, as the law requires, and taking the necessary steps so that the money can be had from Uncle Sam, as desired, by the first of next March.

A REAL CHARITY.

A FORTNIGHT ago I printed the letter of a big-hearted farm woman who, while she had not enough of this world's goods to entitle her to be called rich, still had enough so that she could divide with the less fortunate. She offered to send outgrown children's garments which were no longer of any use to her, but which she thought would be of great help in many a home. Her idea was to have some charitable organization in the city distribute the garments, but it appears that there is need in the country, too. Witness this letter which I have just received and which I shall publish without name or address, in order not to embarrass the writer:

Dear Mr. Pierce:—We are real readers of your splendid paper. I saw in one of your articles where there was a woman had a few garments to give away to the poor. Now, we are poor, and since my boy went to the colors it is hard to get along, and it will be a great help to me if you will see her about sending these garments to me. I am feeble and have twelve children. Most of my children are young. If you will do me this favor I shall never forget it. My children have to go a mile and a half to a country school and they need clothing of all kinds badly.

I sent the name and adress of this farm mother to the one who had offered the outgrown clothing. I have no doubt but that by this time the two have gotten together—in spirit and charity, even if not in person—and that the surplus of one farm home has gone to make good the deficiency in another.

The country is prosperous, the farmers are making money; yet with the boys called to the colors in harvest time there may exist many cases of actual want, which we might relieve very easily and quickly. Will those of you who have an abundance of things which others might want write and tell me? Will those of you who need do likewise? I shall keep your identity hidden, save from those who relieve your wants and share their abundance with you. Let us all play Santa Claus to the needy and less fortunate, to the end that the spirit of Christ may permeate our lives, from one year's end to the other.

MERLE HAY, HERO.

I WONDER what that base libeler of the farmer, E. D. Hulbert, president of the Merchants Loan and Trust Co., of Chicago, will say, now that a grain-belt farm boy has been one of the first three American soldiers to be killed in France. You may recall that I paid my respects briefly to Mr. Hulbert a few weeks ago, after he was quoted as saying "the farmer doesn't want to buy Liberty Bonds, he doesn't want to fight and he avoids his income tax." The words were hardly cold before a boy who had quit his father's farm near Glidden, Iowa, enlisting in the regular army, at Des Moines, not six months ago, paid the great price, in human life, that the world may be made safe for democracy. Mr. Hulbert was in his luxuriant home, enjoying every comfort which money can buy; the farm boy was falling face forward in that shell-raked field known as No Man's Land, giving up his life that such as Mr. Hulbert might remain at home and enjoy peace, prosperity and the profits that accrue from war.

It makes my blood boil when I read such base libels against the farmer; it makes the tears flow from my eyes when I think of how Merle D. Hay, farm boy, died in France, partial payment of the debt we owe because Lafayette and Rochambeau brought their gallant Frenchmen to our shores, when the fires of liberty were about to flicker out, during the Revolutionary war, and, shoulder to shoulder with the farmers who fought at Lexington and Bunker Hill, made this world free forevermore. Merle Hay was "only a farm boy," but he leaves an imperishable name. He was far from home; he had dropped the plow handle for the rifle; the corn knife for the bayonet. Duty ordered him "over the top" of the sheltering trench and he went forth, in the same spirit that he had risen in the dim light of early dawn and had gone forth from his farm home to do the farm chores; that spirit of duty and devotion to detail which makes us so great and so rich as a people and as a nation. Merle Hay will never come back, but the spot where he fell "is forever America;" it is hallowed by American blood—the blood of a grain-belt farm boy.

Yet Mr. Hulbert, in his slippered ease, says the farmer will not fight. I hope he will drop a tear over the bier of Merle Hay and repent the words which are such a base libel, uttered at a time when there should be unity and patriotism from ocean to ocean.

A FARM MOTHER'S SACRIFICE.

I AM in receipt of a touching letter from a farm mother whose boy has been taken from her, but who cheerfully and prayerfully tries to do her best. The letter speaks for itself. The writer asks me to withhold her name, and I have done so, althought I think it deserves to be printed. She writes me as follows:

Dear Mr. Pierce:—I have been a reader of your fine paper for the past three years and always find something good in it. I thank you for the piece you wrote telling how the boys are treated in the army camps. I hope you will write other such articles and keep us mothers posted.

I wish you would publish this letter and try to find how many heartbroken mothers will join me in fasting one or two days each week. My darling boy left the fifth of the last month to join the colors and I fast every Tuesday and Friday and pray for him all the time. I have lots of work to do, but I pray while I work; pray for the war to end before our dear boys have to go to France. If our Lord fasted we can, too, and I do wish other mothers would join me. I would rather you would not print my name, for some might think I am foolish, but I love my darling boy and I do so want him back with me.

There is certainly nothing foolish about any sacrifice or self-denial which will either help the object of our love or assuage our own grief. In this case, fasting does both. The world faces a meat shortage; it is up to all of us to save, so that the boys in the trenches, field and training camps can have plenty of sustaining food. We are not yet upon a food-card basis, but we may be before the war is over. The government has asked us to save meat and wheat, and we know that every ounce which we save is going to relieve the situation in the army. Certainly, this farm mother is justified in fasting, on the ground of helping her own boy and his millions of fellow fighters.

On the other hand, aside from any religious symbolism attached to the fasting (I do not know the religious or denominational affiliations of my correspondent) there is a satisfaction which comes from a sense of duty done, of sacrifice made for loved ones, of a scourging of the flesh either for our sins or as expiation for the shortcomings of others. This good woman need not fear that any one will call her foolish; let her fast every Tuesday and Friday until her boy comes safely home to her; it will do her good and it will help the food situation.

May we hear from other farm mothers; will they write me from the depths of their hearts? I shall respect their wish to withhold their name, if they so desire. But cannot we make this a heart-to-heart meeting of real, true friends, each speaking freely and frankly, without fear of being called foolish, to the end that we may counsel together and help one another with suggestion and inspiration?

THE RIGHT TIME TO BUILD.

I CONTINUE to receive many interesting letters on the subject of the advisability of erecting new farm homes and outbuildings, now that the price of farm products has advanced so much more than the price of building materials. I am convinced that thousands of my readers realize that the opportunity is an exceptional one and are resolved to take advantage of it. As I pointed out, in a recent issue, farm products have advanced something like 100 per cent, while the price of building materials has advanced only about 25 or 30 per cent, so that it takes only one-half the number of bushels of corn or wheat to erect a new farm building today that it did a few years ago. I saw this matter of prices expressed most strikingly in a little paragraph in one of our large eastern magazines recently, in this manner:

A western manufacturer says that a buggy which twenty years ago could be purchased for $60, the equivalent of 300 bushels of corn, now costs $90, while the 300 bushels of corn at market prices will buy a buggy at $90, a farm wagon at $75, a suit of clothes at $20, a dress at $20, a baby dress at $5, a baby crib at $5, a box of cigars at $3, sugar at $10, tea $10, gasoline $100, lubricating oil $15—a total of $353.

While this applies to buggies, the same is literally true of farm homes, barns, silos, cribs, and so on. I doubt if there has ever been a time—not in my recollection, at least—when a bushel of corn or wheat, or a fat hog or steer, would buy so much that the farmer needs, from implements to modern houses with every convenience, as now. It is good economy to spend money at the time when the most can be bought for it. Will you take my advice, investigate this matter thoroughly and write me your experiences and observations?

James M. Pierce

The Dry Barn and Fresh Air.

Dodge County Farmer Installs Ventilating System and Gets Rid of Damp Atmosphere and Dripping in His Dairy Barn.

FOR a good many years Theo. Lehman, of Watertown, Wis., milked his cows in a damp cow barn into which little fresh air ever entered. His was a basement barn and for this reason the heat on the inside produced by the cows during the winter time caused a frost deposit to adhere to the stone walls. The result was a constant dripping of melting snow and a damp atmosphere at all times except when the windows and doors were thrown wide open. During the winter this was not possible owing to the cold and snow.

In 1916 Mr. Lehman decided to install a ventilating system in his barn to do away with the dampness and at the same time provide his herd of producing Holsteins with plenty of good clean air at all times. He did not make the mistake of expecting too much from his system nor was he satisfied with any kind of an installation, just so it resembled in form the ventilating systems on the market. He was careful to plan for adequate ventilation for the entire barn and to follow the dictates of common sense in attending to the system according to the seasons of the year and the prevailing weather conditions.

His success and his satisfaction are great after trying out the system during the past year. His neighbor, well acquainted with the troubles Mr. Lehman previously had in keeping his barn warm and providing fresh air for his stock, has this year installed a similar system in his barn with the full expectation of never regretting it. Neither one of the men has any doubt as to the profitableness of such a system. The health of all live stock is such an important factor for farm profits that the question of ventilation must naturally be taken up by the careful husbandman of today.

Mr. Lehman did not make the mistake of crediting his system with supernatural powers of self-operation. Even the 13-year-old boy who is helping his father in taking care of the dairy herd was eager to explain that on windy days the intake must be closed more than on the quiet days. The same is true when the cold weather commences. If on cold or windy days the fresh air intakes are allowed to be wide open the air entering the barn does so at a faster rate than it is possible for the cows to warm it with the heat which they exude from their bodies. All that the fresh air intake intends to do is to keep up a steady flow of pure air entering the barn at approximately the same rate at which the foul air is drawn up and out of the stable by means of the foul air flues and the ventilator on the roof.

Bad air sinks to lower level. The fresh air coming from above gradually mixes with warm air which naturally seeks the ceiling. This in turn becomes moisture laden and heavier and sinks lower, being replaced by new fresh air which comes in by means of fresh air pipes from the side of the barn. The foul air flues which are located at various points in the barn and about one foot distant from the floor, lead to the ventilator on the roof which draws up this foul air by means of the suction created by the winds which blow through the cupolas.

The first farm buildings which were in general use in the corn belt states in the early days were of necessity of a poorer type than we see at present. Cracks and crevices and ill-fitting doors and windows emitted enough air to ventilate the barn. Where no ventilation took place it did not matter much, either, for in those days stock was not held of such importance nor tended with as much care as in these days. Dairy stock in particular was of the moolie kind, with only here and there a pure-bred sire of a dairy breed. But Wisconsin has made gigantic strides in improving her agriculture during the last two decades. In her dairy work she has surpassed every other state in the Union and she bids fair to add to her laurels in other lines. The fact that Wisconsin has been so progressive in improving all types of agriculture and especially dairy stock is due in a large degree to hard-working and farsighted citizens of the soil. Wisconsin farmers have improved their acres faster and their stock more noticeably and successfully because they were ever willing to do the profitable thing a few years earlier than any other people.

With higher priced stock, higher yielding cows and higher bred sires have also come better and bigger buildings in which to house them. More and more the monster barns which are going up or which have been built during the last few years in Wisconsin are provided with an abundance of sunlight, concrete floors and modern barn equipment. More each year are also introducing modern systems of ventilation. Nearly all dairy barns in particular have some system of providing fresh air for the herd in winter quarters.

Ventilating systems have been greatly improved during the last few years and improve at a rate fully as fast as we have witnessed in all lines of agriculture. The makers of these systems have developed during the last few years after much study and expensive experimentation systems which will rid the dampest barns of all excessive moisture and insure a steady provision of fresh pure air at all hours of the day. It is not too much to say that in perfecting the ventilating systems these men have succeeded in supplying one of the few remaining essentials for successful dairying.

Years ago the laws were not as stringent in regard to the production of milk as they are today. Perhaps it would be better to have fewer laws and better ones instead of those with which we are burdened, but it is certain that what laws there are must be obeyed until they are repealed. One law in particular concerns itself with the importance of producing clean milk. This specifies that ventilation be considered more carefully in the construction of dairy barns. Unsanitary milk, it is argued, results from a lack of ventilation, which causes damp, unclean barns where the likelihood of contamination is greater than in clean, well-aired stables. Concrete floors and gutters and modern equipment cannot be considered the only essentials in the production of sanitary milk. Ventilation is as much necessary for correcting the bad air and drying out of the barn as feed is for the production of the milk. Sunlight can do a whole lot for drying up the ever-present accumulation of wet spots in the barn, but on bad days where no sun is shining the ventilating system will do it properly.

A large barn which is ordinarily kept warm when there are fifty cow stanchions in it during the year cannot be expected to be warm when only twenty-five cows make up the herd, even though it is supplied with the best ventilating system in the world. One cow can only heat a certain small space by her body. To expect a ventilation system to supply warmth is unreasonable. It is not meant to do this. It will conserve the natural animal heat of the cow to the best advantage while at the same time it is carrying off foul air and introducing pure air.

Sufficient foul air flues and fresh air intakes must be provided for each barn so that no one flue is overtaxed. Where these points are taken into consideration and the modern system operated with a little intelligence it will prove all its claims to the entire satisfaction of the most critical stockman.

About Aberdeen Angus Cattle.

Interesting Volume Recently Published by Association.

Under the title "Supremacy of Aberdeen Angus Cattle," there has recently been published by the Aberdeen Angus Breeders' Association an exceedingly interesting and valuable volume. It contains a large number of illustrations of noted Doddies, and, in addition, a number of valuable contributions by men who are regarded as authorities on the Doddie breed. Attention is given in this volume to breeding cattle as well as to prize-winning steers, and a comparison is made of the winnings of all breeds in the steer classes at the leading shows and expositions. This volume is beautifully printed and is worthy of a place in any stockman's library. The statistics of prize-winning animals given in this volume are exceedingly valuable and those who obtain a copy will have these at hand in permanent form. While the supply lasts one volume will be sent to each stockman who applies for it to Chas. Gray, secretary, 817 Exchange Avenue, Chicago, Illinois.

Work of the Naples Club.

To the Editor:—I am corresponding secretary for the Naples Social Club, Buffalo county, Wisconsin, and I will try to give you an outline of our work in this club. The first meeting this year was held in September and we had an exhibit of garden vegetables and products. It was a fine display. The display was kept for a week and then made into a booth, which was shown at our county fair. This booth won first prize, as well as a goodly number of compliments from the passersby. We hope to make this a special feature of our club work each year. In October we held our second meeting and at this time we discussed the second liberty loan and appointed a committee to have charge of the crow, gopher and sparrow contest, which we expect to carry on throughout the year. The club will offer prizes for the one killing the most during the year. At our next meeting the Y. M. C. A. boys are intending to give a minstrel show. We are considering the matter of doing quite a bit of coöperative buying this winter.

H. C. Seyforth,

Corresponding Secretary Naples Social Club, Buffalo Co., Wisconsin.

Bean Seed Prices High.

Although no large amounts of this season's bean crop are available at present, farmers and others who wish to plant beans next season are advised to get their seed supply as soon as possible and then dry it well during the winter.

"Beans would be too green now for seed, and would need to be thoroughly cured out in a dry, well-ventilated place," stated Henry Lunz, college of agriculture, University of Wisconsin, temporary food agent for Columbia county.

"Bean seed is bound to be high next spring, and the present average price of $9 a bushel of sixty pounds may not be the top notch to be reached," added Mr. Lunz.

"Farmers see the advantage of getting in a good supply of bean seed for themselves, and will get busy at it right away. Beans do not require the care in curing for seed that corn does, although they should be carefully sorted and kept dry."

According to men in the bean-growing regions of Wisconsin, the acreage planted to this crop last spring was large. The early snows of late October covered about half the crop, however, and the work of harvesting and threshing the beans will be delayed somewhat. In some places, authorities state, the value of the bean crop to be harvested will actually exceed the estimated value of the land on which it was grown.

You can afford a California Vacation

THIS booklet tells how. It throws Southern California open to you in a new way. It explains how you can go *when* you want, *where* you want, *as economically as you please.*

Southern California, with all its beauty and variety, is the land of plenty. Fruits, vegetables, fowl and fish are abundant and cheap. A wide selection in hotels, bungalows and furnished apartments may be had to suit your purse. There are many reasonably priced boarding places. Numerous and inexpensive one-day excursions are offered by a network of electric lines. Balmy California climate saves fuel.

Two great railroads have established a bureau of travel experts to tell you how you can live in Southern California as economically as at home—or more so. This bureau is the Department of Tours. Its service is free.

The Department of Tours makes you and California acquainted before you go, and sees that you are comfortable while there. It confers with you, learns your desires, shows you how to fulfill them, and through its representatives in California, finds accommodations and even engages them.

To learn *all* that the Department of Tours can do, read the booklet, "Making California Easy." Please ask us for it today

Department of Tours

State Holstein Convention to Burlington.

At the meeting of its board of directors, held at Milwaukee, November 7th, it was decided to hold the next annual meeting of the Holstein-Friesian Breeders' Association of Wisconsin at Burlington. The meeting will take place on January 9 and 10, 1918. Headquarters will be at the Hotel Burlington. With the new interest aroused among the Wisconsin breeders by the decision of the Holstein-Friesian Association of America to hold its 1918 convention in Milwaukee next June, it is expected that the state meeting at Burlington in January will be the largest and most enthusiastic ever held by the state Holstein breeders.

At its meeting in Milwaukee the board of directors of the State Holstein Association also took steps toward making ready for the National Holstein convention to be held in Milwaukee next June. A committee on arrangements consisting of twelve members was selected to make every effort, and to coöperate to the fullest extent with the National Association, to make the convention the largest and best in the history of the National Association. The members of this committee are as follows: S. S. Cramer, Milwaukee, chairman; Fred Pabst, Oconomowoc; A. A. Schlesinger, Milwaukee; Wm. Everson, Lake Mills; W. L. Baird, Waukesha; M. J. Norton, Oconomowoc; W. J. Gillett, Rosendale; A. P. Kaye, Walworth; F. J. Bristol, Oakfield; J. P. Torrey, Kenosha; Emmons Blaine, Lake Mills; Geo. J. Schuster, Mukwonago.

C. J. Schroeder, Racine, secretary of the Holstein-Friesian Breeders' Association of Wisconsin, was delegated to direct the state publicity in connection with the national convention in cooperation with the director of publicity of the Holstein Association of America.

A big feature in connection with the annual June convention of the Holstein-Friesian Association of America is the sale of pure-bred Holsteins held on the two days following the convention. According to established custom, the breeders of the state in which the convention is held make all arrangements for the holding of this sale. Accordingly the board of directors of the state association also provided a committee to take charge of such arrangements. The members of this committee are F. H. Everson, Lake Mills, chairman; S. E. Jones, Watertown; S. H. Bird, South Byron.

Protect Cow's Teats and Udder.

Prevention of injury to cows' teats and udders is most important, says M. H. Reynolds, veterinarian, University farm, St. Paul, Minn. Injury may be caused by dragging over high door sills, by hurrying the cows from pasture when the udder is full, and by allowing them to lie on cold, bare cement floors. The teats, especially the hind teats of low-hanging udders, are sometimes injured between the cows' hocks and the floor when the cow rises.

If the injury is slight, there may be only a bit of dry blood on the end of the teat and the cow may be a little harder to milk than usual. Such cases usually heal promptly, but if the bruised end becomes infected the teat canal and the udder may become inflamed. Sometimes the end of the milk duct is permanently damaged. A severe bruise may result from a teat's being stepped on by a cow in a neighboring stall, while the cow is lying down, and if she jumps up suddenly actual tearing may result.

The treatment varies greatly according to the case. Conservative treatment will often save teats that are only slightly injured. Long continued bathing with hot water and gentle massage, if given early, will often open a closed canal. Much less damage may result from leaving milk in an injured quarter for twelve or even twenty-four hours than from an attempt to force open the end of an injured teat with a milk tube or probe. When teats are badly damaged a competent veterinarian should be called.

Repeated chiling of cows' udders, especially by washing and then exposing them to the cold air, often causes trouble, says Dr. Reynolds. The canal becomes partially blocked, making milking difficult. Small masses of flaky material appear in the milk. In some cases the end of the canal is partly or wholly closed by a scablike formation. Considerable irritation of the skin, particularly around the base of the teats, will usually be noticed. The remedy is, of course, a different method of cleaning the udder, in cold weather.

Cow Testing Reports.

Records on Cow-Testing Champion.

To the Editor:—I am sending herewith four months' record of Minnie, grade Holstein cow. She calved the 25th of June and I think milked considerably more the first of July than she did when I tested her on the 21st. I think the fact that she freshened in splendid condition with surplus soft fat was the principal reason, aside from the fact that she is a typical dairy cow, as are all of Mr. Ney's herd. The fact that she was on short pasture after the middle of August and Mr. Ney could get no rich protein grain, outside of the thirty pounds fed in August, explains the reason why she fell off at that time. As the grain will soon be in the market here we expect to be able to report a fine record for her by the end of the year. Mr. Ney has other cows capable of high records, one other, just freshening and although not at full flow of mik, making over sixty pounds at this time.

Chas. D. Wetmore.
Official Tester, Dunn County No. 1 Cow-Testing Asociation.

Month.	Testing day.	Number of days in test.	Number pounds milk per day.	Pounds milk per month.	Per cent of test.	Pounds of butterfat.	Price paid per pound.	Net value of product.	Days in pasture.	Lbs. of grain.	Value of roughage.	Value of grain.	Total value of feed.	Net profit per month.
July	21	31	60.7	1881	4.8	90.3	$0.425	$38.37	31	..	$1.50	.....	$1.50	$36.87

51.35 lbs. of milk, 115.99 for butter fat, without skim milk. Male calf sold for $45 when four weeks old.

[Editor's Note.—In the compilation of cow-testing reports for July Mr. Ney's grade Holstein cow had the state record with 90.3 pounds butter fat. Her records for August, September and October are also shown herewith, together with the total value of her production, total cost of feed and net profits per month.]

In Taylor County.

To the Editor:—The highest cow in the Chilton Cow-Testing Association for the month ending October 28th is a grade Holstein owned by John Salm. This cow produced 1,473 pounds of milk, 61.82 pounds of fat. The forty-five-pound list for the thirty-day period ending October 28th is as follows:

Owner, name and breed.	Age.	When fresh.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
Arthur C. Peik					
Leita King, G. J..	9	2-21-17	834	5.6	46.70

JESSE C. WOLF, Official Tester.

Chilton Association.

To the Editor:—The Taylor County Cow-Testing Association has practically completed its first year's work. Of the forty who signed up last year only a few will not stay in for the coming year. When bran is $40 a ton and labor almost impossible to get it certainly does not pay to milk cows of questionable production. Don't be one of the farmers who labors all year on profitless cows for the sake of saving the association fee. Don't be one of those who fails to buy feed because he thinks it doesn't pay. Don't be one of those who just naturally stands off and declares that he doesn't believe in "book farming." When you join a cow-testing association you pay for service and you more than get your money's worth.

R. A. Kolb,
County Agricultural Representative,
Taylor county, Wis.

Winnebago Association.

To the Editor:—The forty-pound list of the Winnebago Cow-Testing Association for the thirty-day period ending October 31st is as follows:

Owner, name and breed.	Age.	When fresh.	Lbs. milk.	P.C. fat.	Lbs. b'fat.

ARTHUR BARTHELS, Official Tester.

New Holstein Cow-Testing Association.

To the Editor:—During the month of September 388 cows were tested in the New Holstein Cow-Testing Association, Calumet county. H. J. Duecker carried off the honors for September. His twenty-one registered and grade Guernseys averaged 655 pounds of milk containing 33.7 pounds of butter fat. One cow of his herd is the champion individual for the month, for both milk and butter fat. She produced 1,321 pounds of milk and 52.8 pounds of fat. This is a very good record, considering the time of the year, when the change is being made from pasture to dry feed. Thirteen cows produced over forty pounds of fat in this month. Feed prices in September were as follows: Bran, $30.50; gluten, $50; linseed meal, $53 per ton, and oats, 60 cents a bushel. Prices for butter fat run from 56 to 65 cents per pound, the condenseries going slightly higher than the cheese factories. Our forty-pound list for the month ending September 30th is as follows:

Owner, name and breed.	Age.	When fresh.	Lbs. milk.	P.C. fat.	Lbs. b'fat.
Joe Schmitz					
Wina, G. H.....	10	7-4-17	1182.0	3.5	41.3

NANDER NELSON, Official Tester.
EDW. HASS, Secretary.

Grinding Costs Cut In Two

SAVE half the gasoline you ordinarily use in grinding your feed. Grind a wagon load of grain in one hour at a cost of 15 cents. The modern, scientific roller process of feed grinding will do all this for you.

HOWELL
Roller Feed Mills

have been on the market for a quarter of a century and are replacing thousands of other mills every year. The corrugated rollers shear the grain instead of crushing it—lighter draft, less power and no more heated meal. Built like custom mills. Will grind Graham and Rye flour as well as feed.

Made in 13 sizes—any capacity—a size for any engine.

R. R. HOWELL & CO.,
14 Malcolm Avenue, S. E.
Minneapolis, Minnesota.

TAKE A **Business Course**

A TREMENDOUS DEMAND for trained young men and women. Salaries $900 to $1,250 per year. This school is known all over the Northwest for its superior training and ability to place its graduates. High school and teachers' courses. Also correspondence courses. Write at once for beautiful new catalog.
AUSTIN SCHOOL OF COMMERCE, Austin, Minn.

Seed Corn

HIGH GERMINATING, northwestern Iowa grown, 1916 crop. Reid's Yellow Dent, Dakota Gold Mine, Wimple's Yellow Dent, Silver King, Pride of North and Minn. No. 13. Price $6 per bushel. Guaranteed to please. Seed corn situation is serious. Order early.
L. N. CRILL SEED CO. Westfield, Iowa

BOOKKEEPING, accounting, shorthand by mail. Earn $100 to $300 monthly. Women, too, in big demand. Write today for special low rates. R. Haubrich, B. C. S., A. B., Wisconsin School of Accountancy & Stenog'y, C9 Wisconsin, Milwaukee.

IOWA AGRICULTURAL COLLEGE OATS will yield you 10 to 30 bu. more per acre, and this year seed should be ordered now. Write me for record of my oats in Miss. Valley States. F. E. Jamison, Oakville, Iowa.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word per insertion. See page 18.

Report of Wisconsin Milk Commission.

(Continued from page 1.)

costs of feed are actually much higher than is the case if he could produce the maximum supply on pasture in the summer. To this condition is added the expense of municipal regulations under which he must produce his milk to safeguard the public from disease.

These two latter conditions make it considerably more expensive to produce market milk than milk for creameries or cheese factories, and therefore justify a higher price being paid for fluid milk intended for city consumption than for that manufactured into dairy products.

In view of all these variable factors concerned in the cost of production, it is apparent that cost of making milk cannot be represented by a point, but is a range. In the more efficiently handled herds, this cost will be lower than the average, but many herds are contributing their quota to the market supply of every city that are below average efficiency. How many of these are necessary to produce an adequate supply will be based upon the public demands. It is certainly a fact that the price which is paid the producer must be above the average actual cost to all producers, in order to encourage a reasonable number of the less efficient to contribute their supply. Yet the public cannot be asked to support all of those who are producing at the highest costs of production.

An analysis of the facts presented to the committee showed that the price of $2.30 per hundred pounds which prevailed last August and September was too low for this period. During the past year milk has been sold in the Chicago market at a premium by those farmers who did not contract their output at the beginning of the season, showing that the terms of the contract were against the producer. Under such conditions, the farmer quite rightly feels that he has just cause for complaint, and it was this situation that had much to do with the final conclusion which resulted in setting the price of milk at $3.42 for October.

The sudden advance in retail price from 10 to 13 cents per quart brought into play the operation of a subtle but very important factor in the whole situation. Consumption dropped off at once. Not only from those who could ill afford to pay a 30 per cent increase in the cost of this essential food, but thousands of well-to-do people cut down their consumption, not to save the few cents per quart, but because they made up their minds to retrench in this matter. This is the inevitable result when retail prices of such a staple commodity fluctuate violently. The testimony of distributors is that custom lost in this way does not quickly come back even though the price may be reduced. It is this psychological factor that exerts a most important influence on the matter of retail price. Not only from the standpoint of general welfare of the public, but from that of the dairy industry, stability in retail price is highly to be desired.

The committee recognizes that the interests of both the public and the dairymen would be best subserved if it was possible to sell milk this winter in Chicago on a 12-cent basis, a reduction of one cent from October prices. This is no time for the energies of the people (either public or producers) to be spent in acrimonious discussion. We have a more important job before us right now than squabbling over the price of any single food and the last thing in our food supplies we can afford to cut out, especially with the young, is the milk supply. The committee directed its energies toward the problem whether a 12-cent milk was a possibility and whether in these times both the producer and distributor would be able and willing to make the necessary sacrifice to accomplish this result. We believe that stability in retail price will insure consumption of this food, which is yet the cheapest form of animal protein that we can use, that will in the long run be an advantage to the dairy interests of the state.

A tentative finding was finally reached by the committee in which it was agreed to allow the $3.42 figure for October (as this month had already passed) and to consider a $3.25 price for the coming month, if definite assurance could be secured from the Chicago distributors that the benefit would go to the consumer in the shape of a 12-cent per quart price. This proposition was communicated to the Chicago office of the Milk Producers' Association Thursday afternoon in order that they might have knowledge of the situation. Efforts were also made to reach the office of the Distributors' Association Thursday evening, but they could not be communicated with at that time.

The committee then decided to go to Chicago so that a personal conference could be had with the distributors. This was had on Friday forenoon, Mr. H. A. Wheeler, United States Food Administrator of Illinois, being asked to sit with the conference. Mr. Wheeler then stated that he had laid the matter before some of the directors of the Illinois branch of the association late the night before, and that a tentative agreement had been made with them on the basis of $3.22 for a two months' period, with the understanding that a commission would be appointed by the United States Food Administration which would fairly review the whole question as applied to the Chicago supply, and if upon such analysis it was later found that the price fixed for milk had led to any loss for November and December, either on the part of the producer or the distributor, these losses would be made good for these two months by an adjustment of the price over the next six months. If any adjustment is found to be necessary, manifestly it should be added not to January or February prices, when the actual cost of production is high, but to later months, in the spring, thus making it more likely that a stable retail price may be maintained.

This arrangement was finally agreed to by both the Wisconsin and Illinois representatives of the Producers' Association and was later accepted by the Chicago distributors, and is also approved by this committee.

If milk is to continue to occupy the advantageous position of being the cheapest form of animal protein, which it has for a long time enjoyed, then we must address ourselves to the task of studying more thoroughly than ever before the possibilities of effecting economies. These need to be studied on the part of both the producer and distributor. In spite of all the educational work that has been done there are altogether too many cows producing milk at too high a cost. It does not always follow that the largest producing cows are the most profitable. Much turns on the cost of the feed consumed. Milk can be expensively produced under high-grade conditions, as well as under poor conditions. But the important and necessary thing is to know where one stands. Accurate records are as necessary to know costs as the compass to know direction. While better feeding methods and better cows would undoubtedly raise many milk producers from the lower marginal group into a class where profits were increased, it is also true that the distributive processes need improvement with the view of lowering costs of production.

It has not been possible for a study to be made of the cost of distributing milk in cities, but it is common knowledge that the manner in which the business is conducted at present results in large overhead expenses that are duplicated in each bottling plant and that the cost of delivery is greatly increased by the multitude of small dealers who peddle a small quantity. In Milwaukee the aggregate mileage covered by all the milk delivery wagons is 5.7 times the total populated street mileage, although 45 per cent of the entire business is carried on by one company. In Worcester, Mass., Cance and Ferguson have just reported that the milk wagons travel probably ten to fourteen times the length of the populated streets.

The idea has already been advanced (see Governor's Tri-State Milk Com. Report, 1917, covering Pa., Md. and Del.) that "The distribution of milk should be carried on as a public utility, not only because of the economies in large scale distribution, but also because competition, as in railways and other public utilities, is ruinous if real, and worthless as a price protector to farmer and consumer if unreal." There are, of course, alternative propositions which might be considered which would make for reductions in distributive costs, such as municipal pasteurizing plants, coöperative delivery such as is now practiced in retail distributing.

It is not our purpose to attempt to decide whether these methods are to be recommended or not, but it is our belief that this problem is of sufficient moment so that it should engage early legislative attention and we recommend it to your consideration. Some aspects would require legislative sanction which might be given in case a special session was called this fall.

We shall doubtless do, in the next few years to come, many things for the public good which might not have come so quickly under more normal conditions.

The milk commission as appointed by Governor Philipp was made up as follows: H. L. Russell, chairman, Madison; E. Davenport, Urbana, Ill.; Mayor J. A. Fathers, Janesville; Mayor T. W. Thiessen, Racine; O. R. Smith, Milwaukee; George Ela, Racine county; J. L. Fisher, Rock county; M. C. Flack, Walworth county; G. E. Vincent, Kenosha county; L. W. Hause, Waukesha county; John LeFeber, Milwaukee.

Year tests that Count

These wonderful semi-official records are only a few of a large number of genuine high production tests made under normal conditions with UNICORN DAIRY RATION used as the entire or largest part of the grain ration. They are in no sense forced or freak records as shown by the normal fat percent and the perfect health of these cows and all herds fed on Unicorn Dairy Ration.

Every breeder knows Ajax Flakes (made exclusively by us for years.) Conditions forced us to withdraw it from the market except as one of the ingredients of Unicorn. You will find Unicorn equally efficient as your ration or ration base.

If you have good cows that you want to make even better

Unicorn Dairy Ration

offers you the chance, without exta cost, in fact most likely at a considerable saving.

With an average cow we guarantee a reduction in the feed cost of you milk. Give them a chance - if fed right with Unicorn Dairy Ration they will surprise you.

Unicorn can be obtained by any dairyman or breeder east of the Missouri river no matter where located. Every bag is equally uniform and good no matter where you get it.

Inter-County Holstein Sale.

The Inter-County Holstein sale, held at Watertown, Wis., November 8th and 9th, was generally conceded to be the best ever held under the auspices of this association. The facts for basing this assertion were not dependent upon phenomenal sales, although there were 14 head that sold for $500 or above, but upon the price of the average bred stuff sold. The young stock and heifers sold particularly well. One daughter of Oak De Kol Ollie Homestead brought $675 and another, $600. One hundred and seven head averaged $273.28 and eight animals sold for $600 or above. The principal buyers for the especially good stuff were Lisle Farms, Lisle, Ill.; S. E. Jones, Watertown; Milwaukee County Board of Administration, Wauwatosa; Harry Newell, Marion, Wis.; Chas. Anton, South Randolph and L. C. Birkenstock, Fall River, Wis. The Rhoda, Reed & Kruser consignment was the largest in the sale, and had much to do with the high average attained. The two two-year-old daughters of Oak De Kol Ollie Homestead, the twice National Dairy Show grand champion Holstein bull; the 31-pound four-year-old, King Pabst Pontiac Hengerveld, and also Pabst Maplecrest King, senior herd sire, used in the Rhoda, Reed & Kruser herd, as well as their 28-pound bull calf, sired by this bull, were features of the sale and are the class of animals which help to establish a favorable reputation for any sale compnay to handle. Mr. Pabst's 21-pound bull calf topped the sale at $1,250 and went to Lisle Farms. Mr. Howard Barker, who purchased for the Lisle Farms and who is in charge of the dairy work on this large Illinois farm, used exceptional good judgment at the sale by invariably buying the good stuff offered. It was he who purchased the two daughters of Oak De Kol Ollie Homestead, as well as a number of excellent daughters of Pabst Maplecrest King De Kol, an outstanding individual and a sire that has proven his prepotency through his offspring, which were sold through this sale. Goldthorpe's 32-pound bull sold for $810 to Swoboda Bros. The sale company took a few minutes the afternoon of November 9th to sell a Red Cross calf and raise money for this worthy cause. The Inter-County Holstein sale pavilion offered much more agreeable quarters for holding this sale than had been formerly used at the state fair ground and it is their intention on April 4th and 5th to hold another high-class, two-day sale. Following is a list of sales:

BULLS.

Pabst Maplecrest King, Mar., 1914; H. Lepier, Hartford, Wis. $600
King Pabst Pontiac Hengerveld, Nov., 1913; M. Dement, Lake Mills, Wis. 900

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 25th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends. **THE PATHFINDER, Box 70, Washington, D.C.**

RENEW NOW

Now that EVERYONE is trying to conserve EVERYTHING, suppose we get together and conserve time and money—both for YOU and for us.

Note the date on your paper and if it reads "Nov. 17," your subscription expires in November, 1917, and you should send your renewal at once. Send $1.50 for THREE YEARS, or $1.00 for one year.

You save time and bother if you renew for three years and get the matter off your mind. And you save time and bother for us if you renew early, before the big rush of renewals comes, later on.

During the winter months tens of thousands of readers send in renewals. They come so fast that our regular force cannot handle them promptly. We must use "new help," and this causes many errors, giving trouble and annoyance to you and to us. Please bear this in mind, watch expiration date on your address tag, and renew several months before your subscription expires, if convenient. It will not cost you a cent more, and will be a great accommodation to us.

We are planning big things for our readers this season. We will try to give you better service than ever before. You will confer a favor if you renew promptly. Will you co-operate? Write today.

LEARN STEAM AND GAS Engineering

A GREAT DEMAND—$7 to $11 per day. This is the largest and best equipped steam and gas school in America. Also AUTO mechanics courses. Write for big new catalog.
ENGINEERING COLLEGE,
Dept. S. G. Austin, Minn.

Free Help to the Homebuilder.

CURTIS home books are a wonderful help to anyone planning to build or remodel a home. They are published by the Curtis Companies, who have been in the woodwork business since 1866. They include a vast amount of practical information gained by this institution's years of experience in home planning. Every detail has been worked out carefully with the aim of securing the greatest benefits for the least money. The interior woodwork, which is so important in the home, is described and illustrated in a great variety of styles and designs. Everyone planning a home should have one of these books. If you are interested in homes costing $3,150 and less, you would want Vol. II of "Better Built Homes." If interested in homes costing more than $3,150, you would want Vol. III. Either book may be obtained absolutely free by filling in the coupon in the advertisement on page 32 of last weeks issue of Wisconsin Farmer and sending it to the Curtis Companies, Service Bureau, 1846-1946 South Second street, Clinton, Iowa. Write for your copy today.—Adv.

George, of Evansville.

WALTER GEORGE, Evansville, Wis., is the man that owns Rainy Day and if you could see the pigs sired by this boar you would say that he is one of the good breeding boars of the state. The boars that George has for sale are long, stand up well, have good backs and are big. George's Chesters can be classed as near the big types as any we know of in this state. We wish you could see this good herd of Chesters. If you want a boar, just send your check. Don't worry about what you will get—he will be a good one or none at all. See page 22.—Adv.

FARM MECHANICS

Questions and Answers.

Setting Valve of Case Engine.

Please give instructions for setting the steam valve on a Case compound engine. What is the difference between a high-pressure compound and a low-pressure compound engine?

Answer.—We assume that your engine has the Woolf reverse gear; if we are mistaken, write us again or send to the J. I. Case Threshing Machine Co. for their book, "Science of Successful Threshing." The following instructions for setting the valve is taken from the above book. The setting of the valve for a simple engine is exactly the same as for the compound engine, both valves of the compound engine being moved by the same valve stem:

Before setting the valve it is necessary to find the dead centers of the engine. An engine is on its dead center when the piston has reached the extreme end of its stroke. At the crank dead center, the piston is nearest the crank shaft; the other dead center is called the head center. Case engines are usually set to run "under," that is, the top of the flywheel rim runs toward the cylinder. When timing an engine, the flywheel should always be turned in the direction in which the engine is to run, so as to take up the lost motion. Never turn the flywheel in the other direction; if you run past the mark, turn the wheel around until you come to the mark again.

Obtain a rod or heavy wire about twelve inches long and sharpen the ends. Bend the ends to form a U-shaped tram, the distance between the points being eight and three-sixteenths inches. Take up all lost motion in the connecting rod brasses, crank shaft bearing, and crosshead shoes. Turn the engine until the piston lacks about one inch of completing its stroke. Make a prick punch mark at any convenient place on the crosshead, insert one point of the tram in the mark and with the other end make a scratch on the engine frame to locate a second prick punch mark. The tram points should be the exact distance between the two marks and when the tram is applied, it should be nearly parallel to the piston rod. In the same manner, a mark should be made at any convenient place on the frame near the crank disk, so that the tram measures the exact distance from this mark to another mark made on the crank disk. Next, turn the engine in the direction in which it is to run until the crosshead comes back to same place. Place one leg of the tram in the mark on the frame near the crank disk, and locate another mark on the disk by the tram. When this is done, find the point midway between the two marks on the disk, and mark it clearly, destroying the other two marks. Find the other dead center in the same manner. Now, when the crank disk is turned around until the tram point drops into one of the marks on it, the engine will be on dead center. The flywheel is often used instead of the crank disk for locating dead centers.

The original setting of the valves of Case engines may be determined from marks on the engine. The eccentric hub and shaft are marked with a chisel so that the marks meet when the eccentric is in proper position. There are two marks on the valve stem, and they should be on top. When the reverse lever is at the rear end of the quadrant and the engine is placed on one of its centers, the distance between a mark on the stuffing box and one of the marks on the valve stem should be four and three-sixteenths of an inch, which may be measured by a tram.

If it is necessary to reset the valves, proceed as follows after having found the dead centers as given above. First, see that the reach rod from the reverse lever to the block guide is of such a length that the valve moves the same distance during a revolution of the flywheel in one direction that it moves during one revolution in the opposite direction with the reverse lever in the corresponding end notch of the quadrant. If valve travel is more for one motion than for the other, it shows that the reach rod is too long or too short. The length of the rod can be adjusted by taking the pin out of the lever and turning the fork end of the rod. Be sure to tighten the jam-nut.

See that the eccentric has its point of greatest throw nearly opposite the engine crank pin on all Case engines except the 110 horse power, on which the eccentric is in line with the crank pin. The movement of the valve when the lever is moved from one end of the quadrant to the other with the engine on dead center is called "slip." When the eccentric is properly located, the slip will be the same for both head center and crank center positions. The slip should be in the same direction that the lever is moved. If the slip is with the lever on one center and against it on the other dead center, the eccentric is not in the proper position, and should be rotated until the slip is the same direction as the motion of the lever for both dead centers. If it is impossible to get this, the pedestal is not the right height. Having determined approximately the position of the eccentric, clamp it temporarily with one set screw.

See that the pedestal is the correct height. The amount of "slip" indicates this, and if it be one-sixteenth for both dead centers, and in the same direction in which the lever is moved, the pedestal is the proper height. If the pedestal be too high, the slip will be more than one-sixteenth; if too low, the slip will be less or none at all; or, if very low, the valve will move in the direction opposite to the motion of the lever. The pedestal may be raised by placing shims of sheet iron between it and the frame. It may be lowered by taking out shims or dressing off the bottom of the pedestal.

When you know that the reach rod is the correct length; that the eccentric is in proper position and the pedestal the correct height, give the valve three-thirty-seconds inch lead on the crank end for the threshing motion. The slip of the valve, in throwing the lever over to the road motion, will reduce this lead by one-sixteenth, so that the leads will be nearly alike for the road motion. The lead should be obtained by adjusting the length of the eccentric rod, allowing the nuts on the valve stem to remain undisturbed. The valve is now properly set and the eccentric should be securely tightened.

The Toy Steam Engine.

I noticed in the Farm Mechanics Department a toy steam engine that drew my attention. In my opinion, it cannot run the way the valve is set regardless of whether it cuts off the steam at one-fourth, one-half or three-fourths of the stroke. For instance, if the steam is cut off at one-half the stroke, it is again let in when the steam is half way back on the return stroke. I made a steam engine myself when I was only fourteen years old, and you can bet that I had some fun with it. It was only a small one, made of four-inch gas pipe two feet long for a boiler; wooden plugs being pounded in the ends with a sledge hammer. The cylinder was single stroke, made from a nice smooth piece of brass tube from a round burner lamp, one end being plugged with wood. For the exhaust I filed a crack in the cylinder just at the end of the stroke. I used a common valve to which I riveted a piece of iron so as to form a handle. To this handle I connected a stiff wire to the crank shaft to operate the valve as shown by the sketch. It was in August and the watermelons were ripe when the news was spread to the neighbors of the invention, and no less than twenty-five boys came that night to convince themselves. Of course not one of them thought it was even possible to make a steam engine at home. That night we boiled seven boilers full of water! Four years later I made a larger steam engine with which we could run a one-hole corn sheller and have power to spare. If you care, I will give you a full description of it.

Answer.—From the number of letters we have received, we think that the interest in steam engines is not yet dead. We would be pleased to have your description of your larger engine. We are publishing the sketch of the small engine, and the above description is so complete that a further description is not necessary.

You are mistaken as to your engine being superior to the single-acting engine, the sketch of which we recently published. The action of these two engines is exactly the same. Your valve cuts off the steam at one-third or one-half stroke, as the case may be, and admits it again at almost exactly the same point on the return stroke; therefore, all the power you gain comes from the expansion of the steam.

FIGURE 1.

An indicator card applying to either of these engines may be of interest to our steam engineers. See Figure 2. For the benefit of our readers who are not engineers an indicator card is a diagram, the distances up and down representing steam pressure in the cylinder and the length of the diagram represents the length of the piston stroke. In the diagram shown in Figure 2 we will assume that the piston begins its stroke at E at about sixty pounds pressure. As the piston travels the pressure is nearly constant until it reaches the point of cut-off where the valve closes. As the steam expands the pressure falls. When the piston nears the crank end of its stroke the exhaust opens—point G on the diagram—and the pressure falls very rapidly. At H the piston starts back on the return stroke and the pressure is only a few pounds above atmospheric, atmospheric pressure being represented by the straight line, MH. When the piston reaches the point, I, in the stroke, the exhaust valve closes and the piston begins to compress the steam in the cylinder; therefore, the pressure rises. When the piston reaches J the valve begins to open, and the pressure rises rapidly to nearly boiler pressure. The amount of useful work done is represented by the area enclosed by the solid lines. The dotted lines show how much more work would have been done if the valve were a good slide valve.

Girls Club Work in Wisconsin

ENTHUSIASTIC YOUNG COOKERS AND CANNERS.

Upper group at left—Royce School Canning Club, Beloit, Wis. Upper group at right—Bell Canning Club, Bloomfield, Walworth county, and their pressure cooker. Center group in oval—East Nelsonville Canning Club, Portage county. Lower group—Gaston School Canning Club, Rock county. The clover leaf design is the official National Boys' and Girls' Club emblem.

GIRLS' clubs will be taken care of in a new way this year by Miss Elizabeth Amery, who has charge of the girls' club work in Wisconsin. The splendid work which was done during the summer months by the hundreds of girls' clubs in the state has proved that interest in club matters is great providing the work can be made instructive and attractive.

The girls' clubs will be classified by Miss Amery according to clans. There will be a club for those having domestic science studies in the schoolroom, a club for those with no domestic science work in the school, and a club for older girls who have had at least one year in club work in the state and who have had instruction for one year in the arts of cooking and sewing and who have done home work.

The first of the clubs is the Homecraft Club. This club will hold regular meetings and have officers elected to conduct such meetings. The program of the work will be so arranged as to fit in with the school work in domestic science. They will be organized and ready when the spring work of gardening and canning begins. None of the work which they are asked to do is to be done at home out of school hours.

The second clan is to be named the Girls' Homecraft Club and will consist of girls between the ages of ten and eighteen years who have no domestic science work in the schoolroom. They will sign a project to do the work outlined in sewing, food emergency, gardening and canning which the club undertakes. During the months of November, December and January this work will consist of sewing. During February, March and April food emergency work will be practiced. From May to October gardening and canning will be the chief object of attention.

The club has at least six members and they elect officers to conduct the meetings. Each club will have an adviser, either a woman from the city or one of the teachers from the local school. This adviser will meet with the club, help to arrange the exercises, prizes, achievements and in general be active in arranging the work.

The third club will consist of older girls, possibly between the ages of twelve and eighteen, and will be known as the Wisconsin Homecraft Club. Younger girls will not be eligible because of the requirements which call for at least one year of domestic science work in the schoolroom, a year of cooking and sewing at home and a previous record in some club organization of good standing.

The work these members must do will be performed at home. A list of subjects is given out which will be followed in detail and each subject must be finished before a new one is undertaken. Achievements will be acknowledged by the state leader, Miss Amery. They will be known as honors and the recipients will have something to show for each honor that has been awarded.

So that each girl may be known according to the honors she has received Miss Amery has decided upon a uniform to be worn by the members of the club at their meetings. When a girl receives an honor in sewing she is entitled to wear an additional stripe on her uniform which will serve to establish her rank in the club according to her achievements. As one subject after another is passed an "apprentice" becomes a "craftsman" and finally a "master craftsman" either in sewing, cooking, gardening or canning.

This plan of rewarding each girl for work done by service stripes on her uniform shows the revival of the old craft guild system when people worked through various stages on a trade and

Standard Sanitary Mfg. Co.
Department 207 Pittsburgh

finally emerged as master craftsmen, able to conduct a business of their own.

But in the first two clubs rewards will not be lacking for the industrious ones. There will be scholarships and various other forms of rewards, such as trips to Madison for a week with expenses paid and a good time assured.

The club movement is a worthy one and entitles those at the head the hearty coöperation of every parent in Wisconsin. It will teach the girl the simple household duties during the time when it is easy for the girl to learn, when it will be fun and not drudgery. During all the time she is learning the results in the form of clothes and foods will add to the wardrobe and pantry new and inexpensive things to wear and to eat.

There are 100 clubs now actively engaged in the work just described, but that is hardly anything to boast of in such a progressive state as Wisconsin. There ought to be a thousand.

International Sunday School Lesson.

(By REV. P. B. FITZWATER, D. D., Teacher of English Bible in the Moody Bible Institute of Chicago.)
Lesson for November 18, 1917.

Nehemiah's Prayer Answered.

LESSON TEXT—Nehemiah 2:1-11.

GOLDEN TEXT—Ask and it shall be given unto you.—Matthew 7:7.

It was four months after Nehemiah learned of the desolation of Jerusalem that he had the opportunity to make known his request to the king. Just why he did not test the king's attitude toward him and his project earlier, we have no information. Perhaps there was no great function at which he was called upon to minister in this interval, or his turn of service had not arrived, or his duties were so exacting that no opportunity was afforded for him to unbosom his grief to the king.

I. Nehemiah's Request to the King (vv. 1-8). (1) Its occasion, v. 1. As cup-bearer he was ministering before the king. The cup-bearer was more than a mere valet. He entered very closely into the life's interests of the king, so that the inner life and spirit of the cup-bearer was known. It was expected of such servants that they manifest perfect happiness while in the presence of the king. To appear in his presence otherwise would likely be to the displeasure of the king. Nehemiah's sad countenance while thus serving awakened the king's suspicion. The matter was serious, for Nehemiah was afraid under the circumstances.

(2) The King's inquiry, v. 2. The king perceived that Nehemiah's countenance was sad, though he was not sick, and he knew that something extraordinary had come into the life of his cup-bearer.

(3) The effect upon Nehemiah, v. 2. His heart was filled with fear. He did not know but what this impropriety was so great as to cause his dismissal. His fear was more than that of losing his position; to be dismissed from being cup-bearer would mean the loss of an opportunity to present his request to the king; and, without the king's sanction and aid, his enterprise would fail.

(4) Nehemiah's tactful reply, v. 3. He seeks to conciliate the king by expressing a deep interest in the royal life and person. He says: "May the king live forever," and then tells that the cause of his grief was the desolation of the city where his fathers were buried.

(5) The contents of Nehemiah's request, vv. 5-8. (a) To be sent to Judah to build the walls of Jerusalem, vv. 5, 6. This request virtually meant to be granted a leave of absence from the Persian court and to be appointed military governor of that part of the kingdom of Artaxerxes. The king, doubtless, saw that such a move would be of particular benefit to his kingdom politically, owing to the strategic position of Jerusalem, between Babylon and Egypt. In the case of the breaking out of hostilities between these powers, to have a fortified city in Palestine would be of immense importance. At the king's request, a definite time was set for this leave of absence, v. 6. He remained in Jerusalem for twelve years. A side light on the king's gracious attitude toward Nehemiah is given in this: "The queen also sitting by him." She is not named, but in all probability it was Esther.

(b) For letter to the governors beyond the river v. 6. Doubtless the path of his journey was a dangerous one, and the travelers' safety depended upon having credentials from the king. These letters were more than mere credentials. They were orders for actually conveying him and his party to Judah. Ezra, years before, had desisted from asking a band of soldiers, but Nehemiah was free to ask such a favor. It was right in both cases, but not expedient in that of Ezra. Many problems are clear, if we distinguish between that which is lawful and that which is expedient.

(c) A letter of requisition for supplies of timber, v. 8. This timber was needed, first for the palace or castle, that is, for the fortress near the temple; second, for the walls and gates of the city; and third, for the king's official residence.

II. Nehemiah's Request Granted, v. 8. Nehemiah was a tactful diplomat. He exercised sound sense and prudence in all things, but he supremely depended upon God and prayed for God's disposal of the king's heart as he made his request known, v. 4. The king granted his request "according to the good hand of my God upon me," v. 8. He ascribes the success of his undertaking to God.

III. Nehemiah's Journey to Jerusalem, vv. 9-11. He journeyed from Shushan to Jerusalem under the protection of a military escort. This was of double value: protection and safety. When it was known that Nehemiah was undertaking this work with the consent of the king, Sanballat and Tobiah were greatly grieved. It always is a grief to the enemy when that which will further the interest of God and his people is being made to succeed. When he reached Jerusalem, he did not at once make his purpose known. He waited for three days and then viewed the situation at night.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Enclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date fall and winter 1917-1918 catalog, containing 550 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating thirty of the various simple stitches), all valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, Madison, Wis.

1477—Ladies' combination, corset cover and skirt. The pattern is cut in 3 sizes: Small, medium and large. It requires for cover, 1 yard and for skirt with ruffle 2⅜ yards of 36-inch material for a medium size.

1506—Dolly's set of short clothes. The pattern for this attractive combination is cut in 6 sizes: 14, 16, 18, 20, 22 and 24 inches in height. It will require ⅝ yard for the drawers, ⅞ yard for the petticoat, and 1 yard for the dress of 36-inch material for a 24-inch size. Price 10 cents. This pattern also comes in children's sizes: 1, 2, 3 and 4 years. Price 10 cents.

1652—Girls' dress, with sleeve in either of two lengths, and collar in either of two outlines. The skirt is a three-gore model. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 2¾ yards of 44-inch material for a 6-year size.

1894—A dainty set of ladies' aprons. These aprons are cut in one size only. It will require ⅞ yard of 36-inch material for No. 1 and 1¼ yards for No. 2.

2260—A very pretty dress for mother's girl. Pattern is cut in 4 sizes: 6, 8, 10 and 12 years. Size 8 requires 3⅝ yards of 36-inch material.

2263—A unique and stylish model. The pattern is cut in 3 sizes: 16, 18 and 20 years. Size 18 requires 5¼ yards of 44-inch material.

2274—A becoming model for mother's girl. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 requires 3½ yards of 44-inch material.

2277—A good seasonable style. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 6⅛ yards of 54-inch material.

2284—A smart set of neck accessories. The styles here illustrated are cut in 3 sizes: Small, 12 inches; medium, 14 inches, and large, 16 inches neck measure. Size medium requires for No. 1, ⅝ yard of 36-inch material, for No. 2, ¾ yard of 27-inch material, for No. 3, ⅝ yard of 36-inch material, for No. 4, ⅞ yard of 36-inch material.

Waist 2286-Skirt 2280—A pretty gown. The waist pattern 2286 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt pattern 2280 is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. To make this dress as illustrated will require 8¾ yards of 44-inch material. Two separate patterns, 10 cents for each pattern.

2287—Children's night drawers. If desired, the foot portions may be omitted. The pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 3 yards of 36-inch material for a 6-year size.

2289—A simple dress for home or work. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 6½ yards of 44-inch material.

UPPER WISCONSIN

Looking into Seed Corn Situation

Mr. J. W. Hicks, emergency demonstration agent of Chippewa county, has inaugurated a plan of coöperative distribution of the available supply of seed corn. He has asked every farmer in Chippewa county who has any good old seed corn, or any 1917 corn which may be good for seed, to apprise him of the fact, stating the quantity, variety and germination test of the old corn. Those who desire to purchase seed corn are also asked to notify Mr. Hicks. In this way the emergency agent will be able to get a correct line on the situation. If it is necessary to send outside for seed corn, as seems probable, he will know how much to send for and will be able to advise the varieties which should be purchased. It may be that this same plan, as Mr. Hicks is attempting to work out, is also being suggested by other emergency demonstration agents and county agents. If so, we strongly advise our readers to coöperate with the county man. Let the county agent know if you have some good seed corn, and also let him know if you haven't any. Part of his business is to help you out in this very important matter, and you will find that the county agent will be pleased to do it.

May Have County Agent.

Oconto county is seriously discussing the question of a county agent. The majority of the members of the county boar are successful farmers and the question is to come up for d - cision in the near future. There is a great deal of good land in Oconto county. Much of this is being taken by settlers, and these settlers can well profit by a county agent. Furthermore, there are a few pure-bred herd. being started in the county, and a good county agent would help to increase the number of pure-bred sires in the grade herds.

Brood Sow for Every Farm.

R. A. Kolb, agricultural representative of Taylor county, has written a letter to the farmers of the county calling attention to the grievous mistake which Germany and other European countries have made in slaughtering so many meat animals. Mr. Kolb writes that we ought to take a lesson from the experiences of the countries of the old world. We will face a meat and fat famine, too, unless we are very careful to keep up our herds and flocks and to increase them. There should be at least one brood sow to a farm, and brood sows should be kept four years. The farmer who sells a good gilt or brood sow may realize a good price, but, as Mr. Kolb puts it, he is "selling the goose that lays the golden egg." A brood sow can be wintered cheaply on clover hay, roots and cull potatoes with a little grain before farrowing time. Keep the brood sow and save her for spring litter. Mr. Kolb is starting out on the right track and his slogan is "A good sow on every Taylor county farm."

Jersey Breed in Langlade County

In Langlade county there are now fifteen members of the County Jersey Breeders' Association, and these men are having great success with the Jersey cow under Upper Wisconsin conditions. Jerseys were the first well-bred cattle brought to Langlade county. A railroad conductor by the name of Chas. Beattie, who owned a farm southwest of Antigo, was the first man to bring in Jersey cattle. It was in the early 90's that he secured his first grade Jersey and a few years later he bought a pure-bred sire and a pure-bred female. Forty dollars was paid for the sire and at that time this was considered a good price. Langlade county farmers and residents of Antigo bought cows and young stock from Beattie and as a result a number of new herds were soon started. Mr. Jos. Guenthner imported Jerseys from southern Wisconsin in the late 90's. With careful breeding and selection he and his wife built up the highest producing Jersey herd in the county. In 1915, under the management of Harry Guenthner, this herd averaged 381 pounds butter fat. The Jersey breeders' association of the county was organized in January, 1915. Jersey cows had been showing up well in the cow-testing associations. The monthly honor roll of forty-pound cows appeared regularly in the local papers and this helped to swell the interest in the Jersey, which always has a prominent place in these reports.

The second annual summer meeting was held in June, 1916, at the Chas. Schotte Farm. Pres. F. F. Showers, of the state association, in two addresses aroused further interest in the Jersey breed in Langlade county. Within a year after this meeting five splendid pure-bred sires were brought into the county. The annual reports of the testing association show $2, $2.50, $3 and sometimes as high as $4 earned from Jersey cows for each $1 expended for feed. This caused members of the association to feed liberally and splendid production records, up to 475 pounds butter fat, have since been the result. That Jerseys are persistent producers is proved by the records of several Langlade county cows, the records being available for a period covering three years:

Susie, owner Chas. Schotte:

	1914	1915	1916
Milk	4562.8	8424	8195.
Butter fat	259.1	466.3	478
Net proceeds	$34.48	$92.34	$100.95

Jennie, owner Henry Ings:

	1914	1915	1916
Milk	6932	7150	7186
Butter fat	399.9	453.2	423
Net proceeds	$80.31	$88.48	$100.57

Seven Up, owner H. Guenthner:

	1914	1915	1916
Milk	8115	8556	7649
Butter fat	399.5	429.7	364.1
Net proceeds	$67.20	$59.44	$70.28

Explanation of the great difference between the records of Susie for 1914 and 1915 is found in the fact that this cow was sick in 1914 and produced normally on but half her udder.

Winter Wheat.

To the Editor:—My experience is that the main things to do to get a good crop of winter wheat are to plow your land early, select the very best seed, drag the ground thoroughly and in the spring drag it again with a light drag. A good plan is to sow wheat in sod. Then it stands a better show in heavy frost. My wheat yield this year is about thirty bushels to the acre. John Kaatz.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Wormseed.

How much wormseed can I give a seven-months-old pig?

Wormseed itself is very seldom used in the treatment of hogs, but its active principle, santonin, is usually used instead. From three to ten grains may be given to a hog of seven months.

Bloody Milk.

Would like to know what is the matter with a cow I have. Once in a while her night's milk is bloody and when it stands leaves a sediment resembling brick dust. She appears well and has not failed much in the flow of milk. She runs on a pasture and is fed bran, shorts and alfalfa. Other times her milk seems all right. She is about four years old.

Feed less shorts and give one rounded tablespoonful of Glauber's salts in feed every one to two days. This milk should not be used for human food, but should be used for calves or pigs.

Swellings.

I have a mule with both hollows over his eyes swollen out nearly as large as a hen's egg, and two lumps behind the jaw bone on each side. One is about the size of a hen's egg, the other the size of a walnut. He also has a lump under his jaw about the root of his tongue. He is a little lame in the stifle joint in his left hind leg. Nothing runs from his nose or eyes. He seems to be all right every other way and has a good appetite. I feed him oats and good timothy hay.

In some cases these swellings can be reduced and in others not. Try tincture of iodine (pure) on these swellings once every one to two days, being careful not to get it in the eyes.

Scours.

My pigs are dying at the rate of two or three a day. They are about six weeks or two months old. We feed them all the oats, with some wheat in it, that they will clean up, and swill them with separator milk and ground wheat and oats. They also have some corn twice a day. Those that are not sick are fat and large for their age. Scours seems to be the cause of death. What can I do for them? I have been feeding lye, about one-fourth can to a barrel of slop, three times a week.

Scours in pigs may be due to irritating food or food too rich either for the pigs or their mothers if they are nursing them, or from the effects of cholera. An effort should be made to determine if the scours is due to cholera or not. If not, it is quite likely due to feed that does not agree with the pigs. It may be they are getting too much wheat in their ration. Also avoid any extra feed, lye, etc., at present. Do not let the pigs pile up in their sleeping quarters. Make each sow and her pigs sleep in a separate pen. Getting very warm and cooling suddenly may cause scours.

In And Around Wisconsin.

Ross N. Root, formerly tester for the Westby, Vernon county, Cow-Testing Association, is now with Uncle Sam's fighting forces. His present official title is Corporal Ross N. Root, Company A, Thirty-fourth Infantry.

Dane county now has four cow-testing associations, all of them having been organized since April, 1917, the month the United States decided to enter the war. These associations are known as the Pleasant Springs, Stoughton, Black Earth and Cambridge.

F. L. Aderhold, of the Wisconsin Dairy and Food Commission, judged the cheese at the recent National Dairy Show at Columbus, Ohio. A few of the high scores were as follows: American cheddar cheese, H. J. Kuschel, Coleman, Wisconsin, 98; Andrew Peterson, Lone Rock, Wisconsin, 97; brick cheese, Fred Moser, Wisconsin, 96½; creamery butter—whole milk, W. E. Redman, Minnesota, 96; creamery butter—hand separated, B. J. Linvig, Wisconsin, 95; dairy butter, C. F. Klinger, Connecticut, 94½.

Owing to unfavorable weather conditions the Equity Coöperative Packing plant at Fargo, North Dakota, will not be finished this year. It has been difficult to obtain machinery for the Equity plant and the farmers of North Dakota are quite disappointed that they will not be able to use their plant before some time next summer.

Apparently the sale of good farm land at high prices is not a spasmodic event in Washington county. We find reported again this week the sale of the Bernard Brierton farm near Mapleton. This is a 200-acre tract one mile from the village and sold for $32,000. This farm had been owned by Mr. Brierton or some member of his family for fifty years.

A meeting was recently held in the village hall at Milton, Rock county, to discuss the subject of hemp growing. Several farmers had visited Brandon, Fond du Lac county, and made investigation of the hemp business there. About 200 acres have been promised near Milton. To establish the necessary equipment for preparing hemp for market it is necessary to have at least 300 acres and it seems probable that this will be secured.

The annual convention of the State Horticultural Society will be held in Madison December 11th, 12th and 13th. "War Gardens for 1918" will be one of the main topics for discussion. Two officials of the United States Department of Agriculture will address the convention. Delegates from Illinois, Minnesota and Iowa will attend. Twenty-five speakers will participate, covering all important horticultural topics. Attendance is not confined to members and an invitation is extended to everyone in the state. For full information concerning the convention, membership in the society, etc., address, Frederick Cranefield, Secretary, Madison, Wisconsin.

At a meeting of a number of Calumet county Guernsey breeders, held in the court house, Chilton, Wisconsin, November 3d, an organization was effected with the following officers: Lewis McGrath, president; Herman J. Deucher, vice president; Royal Klofanda, secretary; Edw. Hass, treasurer. There are nine charter members who own approximately seventy-five pure breds and 150 grades. Mr. Ansrud, field representative of the American Guernsey Cattle Club, spoke at the meeting. The next session of the county club will be held December 8th, at which time talks on appropriate subjects will be given by the best speakers obtainable. A special drive will be made for new members and a campaign of advertising will be carried on.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Farmer and Fancier.

To the Editor:—Like the church and the world, the farm poultryman and the fancier must be reconciled if we would do our best at either. The time has passed when anyone says "fancier" we cudgel up a mental picture of a chicken with beautiful plumage, offset by a weedy, willow-legged weakling, carrying a big comb and a score card that means little.

Almost any pure-bred fowl is all right for the farm, as Mr. Lawrey says in a recent number of this paper. But, you see, if a clean-legged chicken carries feathers between his toes, why he is not pure bred. And regarding the defective ears, well, that is a mistake, too. The writer knows from a trying experience, and it required many years to eliminate this very defect that crept into our flock from using a single pullet of this kind, that otherwise was very good.

"What difference does it make?" is insisted. Just this "difference:" Pure-bred poultry is the first thing that gave the world the industry that today has every other beaten for the investment. Our "practically pure" fowls came from this source, and only for the Standard of Perfection and the people who rise to its requirements, the pure-bred stock would soon degenerate and go to the "bow-wows."

The writer not long since happened to be sitting near a couple of farmers, neighbors of ours, who have been very successful. They have acquired lands, and one of them has a modern house with all of the conveniences to be found in a city home. They were talking about our farm adviser, who is an exceptionally alert, intelligent man for the situation.

The men themselves were "fit." They had done thus and so. Then, meaning their adviser, "I wouldn't pay a bit of attention to anything he says!" "'Me' neither!" grunted the other. "No one on this earth could do anything and pay any attention to his foolishness!" When, as a matter of fact, they had done the very things that the adviser is advocating today. Those misguided souls really think that they themselves thought first of how to seed alfalfa, build silos, rotate the crops, build up a dairy large enough to keep up running expenses at least, when it all came originally from the same source—the state experiment station.

This may seem like a roundabout way to illustrate, but it about tells it all. Just watch a poultry judge of today. Other things being equal, or nearly so, he will award the prize to the bird that carries either the heaviest meat-making points, or, if the egg breed, the one that gives promise of grinding out eggs galore. The pure-bred flocks are a part of, and not apart from, the farm.

Then there is another reason why we should keep to one type. The demand has never yet been filled for stock and eggs to head the flocks of farmers who raise commercial poultry. If kept right up to the standard and the owner will only advise people that he has a flock of pure-bred chickens that he is selling at from $2 to $5 each, and eggs for hatching at from $1 to $3 per sitting, he will have to buy his fries and eggs for Easter. We know, have tried it, and it seems to take a lot more when we must buy them.

Subscriber.

More on Milk Costs.

The Milk Producers' Association of the Chicago district recently asked Prof. F. A. Pearson, of the University of Illinois, to make a statement as to the approximate cost of milk production, based on facts worked out at the Illinois Agricultural Experiment Station. Professor Pearson made the following statement:

The department of dairy husbandry has prepared the following method of determining the approximate cost of milk production with a given set of facts under the conditions that usually prevail in the milk district tributary to Chicago. This method is based on data and represents approximately 1,000 cows.

Amount of feed and forage and labor entering into average herd costs of milk production per hundredweight:

Grain	44 lbs.	Bedding ...	39 lbs.
Silage	188 lbs.	Man hours.	2.42 hrs.
Hay	50 lbs.		

In addition to the above debits are horse labor, interest, buildings, equipment and miscellaneous costs. Credits not included are increased in stock manure and miscellaneous items. The studies indicate that the above debits not included are approximately offset by the afore-mentioned credits, and, therefore, both may be disregarded in making a practical rough estimate for the cost of production of milk. The desirability of this is obvious, as it minimizes the amount of calculations.

This data represents year costs from which the monthly price may be secured. The average price paid in the past per month for milk in the Chicago district is taken as an indication of the proper distribution of price by months to keep up the supply of milk.

The percentage deviation of the monthly price from the mean price as computed from average prices for the past ten years, is as follows:

Table 1—Percentage Deviation by Months from Average Price.

January	119.0	July	83.7
February	114.3	August	94.2
March	106.5	September ...	96.7
April	94.2	October	109.2
May	73.2	November ...	118.3
June	70.6	December ...	120.3

Example: Grain, $52.50 per ton; hay, $17 per ton; silage, $8 per ton; bedding, $7 per ton, and man labor, 22.5 cents per hour.

Grain, 44 pounds at $52.50.....	$1.15
Silage, 188 pounds at $8	.75
Hay, 50 pounds at $20.....	.50
Bedding, 39 pounds at $7.....	.14
Man labor, 2.42 at 25 cents.....	.60
	$3.14

From Table 1 will be noted using 100 per cent as average yearly price, that the October price is $109.2 per cent. The October price would then be $3.14 times 109.2 or $3.43 per hundredweight.

(Signed) F. A. Pearson.

It will be very readily seen that this gives the price of $3.71 for 3-5 milk for the month of November, and $3.78 for the month of December. When translated into the can price, gives $2.73 per eight-gallon cans, f. o. b. Chicago, for the month of November, and $2.78 for the month of December.

Farmers Warned of Oats Fraud.

The Minnesota Crop Improvement Association has received word of a seed salesman operating in southeastern Minnesota who is offering farmers seed of a new kind of oats "that will not lodge." The man is said to have persuaded not a few farmers to buy at exorbitant prices. C. P. Bull, secretary of the crop improvement association, warns the public against such traffickers.

The most fascinating thing about the deal is the price, $3 per bushel, and the contract plainly states that the verbal statements of agents are not to be relied upon. Everyone knows that there is no such thing as a variety of oats that will not lodge, when planted on rich or heavy soil, and when market oats are selling for from 50 to 60 cents there should be a good profit in selling at $3.

If the people would only realize that the experiment station could and would give valuable advice in regard to fake varieties, there would be fewer agents getting rich.

Protect trees and shrubs from rabbits now. Some of the wire or wood protectors are good. Burlap, paper, or even corn fodder, may be tied on with good results.

160 ACRE FARMS IN WESTERN CANADA FREE

Canadian Farmers Profit From Wheat

The war's devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and wheat at over $2 per bu. offers great profits to the farmer. Canada's invitation is therefore especially attractive. She wants settlers to make money and happy, prosperous homes for themselves by helping her raise immense wheat crops

You can get a Homestead of 160 a. FREE

and other lands at remarkably low prices. During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to acre. Wonderful crops also of **Oats, Barley and Flax.**

Mixed Farming as profitable an industry as grain raising. The excellent grasses full of nutrition are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent.

There is now an extra demand for farm laborers to replace the many young men who have volunteered for service in war. The government is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or

GEO. A. HALL, 123 Second St., Milwaukee, Wis.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Anoka Farms Short-horn Offering.

THE 16th annual offering of Short-horns at Anoka Farms, Waukesha, Wis., will take place Saturday, December 1st, at which time there will be offered 50 head, the superior of which, numbers considered, has never been in a sale ring. The 33 heifers and 17 bulls cataloged for the sale may well be called the last word in Short-horns. There have been many high-class offerings at Anoka, but in the coming sale all previous efforts have been outdone. A study of the catalogs reveals representatives of practically every Scotch tribe of note. Five are imported, four females and one bull, and balance are Anoka productions. The Harding establishment has always been looked upon as a fountainhead for the best bulls the breed affords and this year's offering pesents some remarkable bull propositions. The Short-horn bull sensation of this year, Anoka Champion, is a dark roan, sired by Sultan Stamp and belongs to the Autumn Queen tribe. He was first in class and futurity champion at Des Moines this year, first at Hamline and first and grand champion at Milwaukee. He is one of the greatest prospects ever bred at Anoka, and there is no herd in the country but what he would grace and give added strength to. An extra good young bull is listed in Royal Stamp by Crystal Stamp. He belongs to the Crocus family, and carries the Anoka stamp of excellence from end to end. In head, top line, depth, thickness and handling qualities he is all there. Merry Stamp by Crystal Stamp, is a white bull of much excellence, with quality and smoothness. Some good young bulls by Imp. Rusper Champion are in the sale. Clipper Perfection is out of a dam by Sultan Stamp, and will certainly suit any person looking for a red bull and a cracking good white calf will be found in Rosebud Champion, a Campbell Rosebud. This calf is exceptionally good, taken from any standpoint. Anoka Stamp by Regal Stamp is a good one, as is also Anoka Proud Star, a Secret, Nonpareil Crystal by Crystal Stamp, and so on through the entire list. A better quartered lot of cattle one will seldom find, as they are remarkable for their depth and thickness. A number of the calves in this sale have been entered at the International Live Stock Exposition, and will be shown there if the purchasers wish. The Anoka management has had prepared a very handsome photogravure showing every animal in this sale and one of these, together with a copy of the catalog will be sent to those who write for it. Address Anoka Farms, Waukesha, Wis., as per the advertisement on page 21. Kindly mention this paper when you write.—Adv.

Roberts Live Stock Bureau.

J. A. ROBERTS, the genial live stock judge located at Waukesha, Wis., has just launched a new business that he terms the "Roberts Live Stock Bureau." The business of this bureau is to buy and sell live stock on orders, and with the unlimited experience that Mr. Roberts has had, we feel confident that the new venture will prove satisfactory to all concerned. For several years Mr. Roberts has been filling orders for Holsteins and Guernseys and the only difference now, is that he is going to give all his time to this business and take in a bigger field by buying and selling all kinds of live stock. If you have registered or high-grade stock to sell or if you wish to buy, investigate this bureau. Mr. Roberts has 25 representatives and their business is to work in conjunction with Mr. Roberts. Their address is 2918 Michigan Ave., Chicago, Ill., and if you want further information address your correspondence accordingly. We gladly recommend Mr. Roberts.—Adv.

Merriman's Guernseys.

S. A. MERRIMAN, Fort Atkinson, Wis., is now offering for sale some choice pure-bred Guernsey cows as well as young bulls ready for service. These young bulls are from A. R. dams having completed very creditable tests. We have had the pleasure of looking over Mr. Merriman's Guernseys several times during the last six months and we consider that he has done some of the best A. R. work which has been accomplished in Jefferson county. Since his son, Clifford, has come home from the university much more interest has been taken in A. R. work, as Clifford has been devoting a great deal of his time towards this particular phase of boosting his father's herd. The last time we looked over the Merriman herd there were about ten as nice cows on A. R. work as we have seen in many a day. See page 20.—Adv.

Roy Horsfall, of Grant County.

ROY HORSFALL, Mt. Hope, Wis., (Grant county) bought one of the good boars in the Atwater sale, being sired by P. S. Wonder out of Proud Helen 2d, the grand champion sow at Milwaukee. This boar will be used on some good King the Col. and Defender-bred sows in the Horsfall herd and these will be offered for sale. If you are going to want a few gilts, Roy can fill your wants. He also has some fine fall pigs that he will sell worth the money, if taken at once. In boars he has a few left that he will ship out on order and guarantee satisfaction. We recommend this breeder. Write him and mention The Wisconsin Farmer.—Adv.

Grahamholm Bargains.

MR. W. J. BOYNTON, manager of the Grahamholm Farm, Rochester, Minn., has just written us that they are offering for sale Gover's Pauline Segis Grahamholm 185290. While visiting the Grahamholm herd a few months ago we had an opportunity of inspecting the individuality of this animal, as well as his sire and dam. This young bull was born February 22, 1916, and is a handsome individual, well grown and ready for active service. As indicated by the cut which is used in the advertisement now running it can be seen that he is also well marked. His sire, Sir Winona Beets Segis, is in our opinion one of the greatest herd sires that has been used in the Northwest. He is a worthy son of the great King Segis and has already to his credit 14 A. R. O. daughters, three of which are above 28 pounds. His dam, Pauline Govers De Kol 2d, is a remarkable cow, having produced 30.03 pounds butter from 569.50 pounds milk in seven days; 122.18 pounds butter from 2,442.50 pounds milk in 30 days, her average per cent fat for her 30-day record being 4 per cent. She also won the 32d association prize in 1914. Pauline Govers De Kol 2d also has three other good seven-day records besides the one mentioned; 28.36 pounds at 12 years; 27.16 pounds at eight years; 26.23 pounds at seven years. She is not only a phenomenal producer herself, but she has six A. R. O. daughters and one A. R. O. son and is a full sister to the Annie De Kol Butter Girl, a three times 30-pound cow that is one of the most conspicuous members of Mr. Powell's noted Model family. We believe that anyone looking for correct breeding, high A. R. O. backing, good individuality and desirable markings will find them all in this young bull which the Grahamholm Farm is now offering for sale.—Adv.

Attention, Chester White Breeders.

THOSE who wish to sell bred gilts or sows in the combination sale to be held in Madison, February 20th, should send in their entries at once. The sale is assured and it is very necessary to know how many entries there will be. It is impossible to say at this time how many each man can sell, but very likely each breeder will be allowed two entries. It is the intention to sell 50 head—there may be more entries than this number and there may be less. If so some of the breeders will be asked to consign more, or enough to make the 50 head. The important thing is to send in your entries at once. You don't need to send the breeding now. All they want to know at this time is the name of the breeder that wishes to list Chesters in this sale and whether he will have one or two to enter. At a later date they will ask you to send breeding, etc., on a form that will be sent to those that list their gilts or sows. No inferior sows will be accepted. This is a breed promotion sale and no animal will be accepted that will be a detriment to the welfare of the breed. It is impossible to say just what the expense of the sale will be, but this will be pro-rated among those selling and this will be around $10 a head. Send in your name at once—this is your sale, a breeders' sale, and you must do your part. Write A. H. Kuhlman, Juneau, Wis., or T. P. Shreve, Janesville, Wis., and your entries will have proper attention. This is the year to boost the Chesters. Will you do your part?—Adv.

Cole Offers Good Gilts and Fall Pigs.

WE have just had a letter from A. W. Cole, Lodi, Wis., in which he advises that he has had a brisk trade in Poland China boars and has sold down to five boars left. He writes that these weigh over 200 pounds and are good in every respect. He also offers 18 spring gilts, litter mates to the boars that have sold so rapidly as well as 30 good early fall pigs. You should be interested in some of these Polands and if you will write Mr. Cole and let him describe what he has, we feel that he can fill your wants satisfactorily. Mention The Wisconsin Farmer when writing. See page 21.—Adv.

Information Regarding the Madison Duroc Entries.

WE have just had a letter from J. D. Gant, in charge of the Duroc Jersey sale to be held at Madison, February 21st, in which he says that several of the breeders have neglected to advise him how many sows and gilts they expect to sell in this sale. He has enough entries now so that the sale is assured and if those that wish to enter this sale will advise him at once, it will help materially in making plans, etc. Write Mr. Gant at Delavan, Wis., and do this at once.—Adv.

J. D. McDonald at West Salem.

J. D. McDONALD is now getting settled in his new quarters at West Salem, Wis. No doubt many are familiar with the Stubbs farm where so many Guernsey cattle were bought and sold. If so you know just where McDonald is located. The farm is inside the city limits and a natural place for the good Polands and Holsteins owned by J. D. McDonald. Mac has a few good spring boars for sale and a couple of choice fall boars that were in his show herd during the past season. Mr. McDonald has also recently purchased a litter of ten pigs—five gilts and five boars—sired by the $6,600 Gerstdale Jones. These pigs are out of a sow that Wm. Wrigley, Jr., paid Peter Mouw $310 for. Mr. McDonald is reserving the gilts for his bred sow sale February 6th and also one of the boars that he wishes to use. The other four boars are offered for sale. There is not much difference in the five boars and any breeder in the state could well afford to use one of these boars. Gerstdale Jones is going to be well advertised and his get and breeding is going to sell at a premium and if you have some gilts to sell bred to a son of Gerstdale Jones, you will be able to sell them at a premium, which will more than pay for the boar. Mr. McDonald also has some very fine fall pigs and he is making a special price on pairs and trios if taken at once. Don't forget February 6th, the day of McDonald's winter sow sale. This will be his first sale and for this event he expects to catalog and sell the greatest lot of Poland China sows ever listed for a sale in the Northwest. We have no doubt but what it will be "some hog show." In the meantime write the owner relative to the boars he has for sale. Don't forget to address the letter to West Salem and not North Bend. See page 21 for advertisement.—Adv.

W. C. Scheibe's Chester White Winnings.

AT the Minnesota State Fair this fall Mr. Scheibe, of Burlington, took one first, three seconds, six fourths, one fifth, one sixth and two Wisconsin specials. At the Walworth County Fair he took 11 firsts, six seconds and three thirds, and at the Winnebago Fair, six firsts, six seconds and two champions. At the Beloit, Fair, Perfect Prince 37749 was placed champion boar over Pay Stretch, the grand champion boar of the Wisconsin State Fair. Mr. Scheibe now has spring boars and sows of the best type and breeding sired by Perfect Prince and Guy's Comet for sale. He also has a junior yearling boar that was fifth prize at Minnesota, third at Wisconsin, second at Elkhorn and first at Beloit for sale. Likewise Guy's Comet himself and Tomson's Model, a fall yearling is for sale. Mr. Scheibe has 45 fall pigs that will be for sale at weaning time. Readers looking for a chance to buy the correct type of Chester Whites will do well to get in touch with Mr. Scheibe, as we have seen his herd upon several occasions and know that they are worthy of the numerous prizes which they have won at the various state fairs this fall. See page 22.—Adv.

The Best Scotch Bulls in the State.

NO breeder in the state has a better lot of Scotch bulls for sale than J. E. Kennedy, Janesville, Wis. From time to time during the past year, the agricultural press has commented on the high-class herd of Short-horn cattle that Mr. Kennedy has congregated at Oaklawn Farm. We say again that no breeder has 40 head of Scotch cows that are better individually or better bred than the Kennedy herd. He has for sale a number of choice bulls. These bulls are mostly roans in color and are out of these great cows in the Kennedy herd. Many of them were in calf when purchased and some of these bulls are by the noted sires of the breed. If you want a Scotch bull, you need not go out of Wisconsin to find them just as good as grows. Write for further information and in so doing please mention The Wisconsin Farmer. See page 23.—Adv.

Grundy's Bates Short-horns.

A. T. GRUNDY & SONS, of Oshkosh, Wis., are offering bull calves nine months old and younger sired by Monarch 429070 and from good milking cows. Knowing the tendency of the Bates Short-horns, farmers looking for animals which are capable of producing both milk and beef we feel confident that you will find what you are looking for in Grundy & Sons' herd. See advertisement on page 23.—Adv.

Aberdeen Angus Sale.

AN important Aberdeen Angus sale will be held during the week of the International at the Union Stockyards, Chicago, Wednesday, December 5th. It will be managed by the American Aberdeen Angus Breeders' Association and the sale will include 40 head of the most meritorious animals ever cataloged by the association. There are 18 Blackbirds, seven Trojan Ericas, seven Prides of Aberdeen, four Queen Mothers, one Coquette, one Barbara, one Heather Bloom and one Easter Tulloch Margaret. Two of the Blackbirds are of the Blackcap branch and three of the Prides are of the K. Pride branch. The names of the consignors are as follows: Hobart Ames, Wm. R. Blake, Arthur Cecil & Sons, W. H. Cooper, Dwight Cutler, Clarence W. Eckardt, Escher & Ryan, John H. Fitch, John S. Goodwin, Harrison & Harrison, J. W. McClung & Son, J. & W. D. Mobley, Wm Phares, F. J. Roberts, D. K. Robertson & Son, J. Garrett Tolan, Julius Tudor & Son and Ed Watkins. There are ten bulls and 30 cows and heifers in the offering. Many of the cows have calves at foot. Several of the animals have not had an opportunity to compete for prizes. However, all possess show-yard merit. Illustrated catalogs are ready for distribution and those interested should apply at once to Chas. Gray, 817 Exchange Ave., Union Stockyards, Chicago, Ill.—Adv.

Write Derenthal for Chesters.

H. A. DERENTHAL, Wykoff, Minn., advises us that he is sold out of fall boars and March boars. He writes that he has some good April and May boars, with plenty of stretch and frame and plenty of size for their age. These are priced for quick sale. He has 32 head of these and they must be sold within the next 30 days to make room for the brood sows and fall pigs. Here is your chance to get a boar worth the money. We are glad to refer you to this firm, for they produce a type of Chesters that are in demand and that more people should try to raise—the big kind with quality, with good backs. Let Derenthal describe his boars to you. See page 22.—Adv.

Special Train to Harding Sale.

F. W. HARDING has arranged for a special train from Chicago to Waukesha, Wis., Saturday, December 1st, over the Chicago & Northwestern railroad. The train will leave Chicago at 8:40 a. m. arriving at Waukesha at 11 a. m. Returning will leave Waukesha at 5 p. m., reaching Chicago at 7:30. The time of departure is set so that connections can be made from nearly all trains arriving in the morning, so that parties from all sectios can attend the Short-horn sale at Anoka and return to Chicago in ample time for the International. Train will leave from the Nothwestern Station, Madison and Canal streets, Chicago.—Adv.

Constance's Duroc Boars.

MR. CONSTANCE, of Waupaca, has on hand a particularly fine lot of spring boars for sale sired by many of the leading prize winners of the breed—such as King Defender, that was grand champion at the Wisconsin State Fair in 1916—King Orion, grand champion Wisconsin and Minnesota State Fairs in 1917, and Mae's Long Defender, a splendid son of Lee's Defender, grand champion at the Wisconsin State Fair in 1914. Breeders looking for high-class spring boars will be sure to find them in the lot that Mr. Constance is now offering for sale. See page 22.—Adv.

Crites Bros.' Holstein Calf.

CRITES BROTHERS, Honey Creek, Wis., are now offering a bull calf sired by Portage Pauline King 73779. It will be remembered that Crites Brothers bought the senior herd sire of Pinehurst Dairy last spring at the Lake Mills sale. This animal was senior champion at the Elkhorn Fair this fall and is one of the good bulls of the state. It is the intention of Crites Brothers to do some testing this winter and we make the prophecy that it will not be long before they will be heard from in the Holstein world. See page 23.—Adv.

Grant County Angus.

REMEMBER, Grant county, Wisconsin, leads the state in beef cattle and especially Aberdeen Angus. Some fine herds of this breed are in the southwestern part of this state and if you want one or more females or a bull to place at the head of your pure-bred or grade herd, investigate the Grant county Angus by writing Walter J. Steinhoff, secretary, Platteville, Wis. He can tell you just where you can buy a bull or some heifers that will fill the bill. See page 20.—Adv.

Norton Polands at Brooklyn.

WE recently saw 15 very choice Poland China boars owned by C. E. Norton, Brooklyn, Wis. These boars are in fine condition, will average 200 pounds or more and will please the man that buys them. Their breeding is big-type, being of the Big Bone and Longfellow blood lines. We know these boars will please at the price Mr. Nor-

SIRED BY ALDOW CLIMAX, 1917 grand champion Minnesota and Wisconsin State Fairs. This advertisement will appear but once.
WHITMORE BROS. :: :: :: :: **Lyons, Wis.**

HEREFORD CATTLE.

HEREFORDS

JUST DROP us a line if you want a bull, we have them to sell. Have ninety cows in the herd, headed by outstanding sires. We invite correspondence and inspection.
L. M. SCOTT & SONS (Grant County) **Bagley, Wis.**

ABERDEEN ANGUS CATTLE.

RAISE BABY BEEF

ABERDEEN ANGUS THE PREMIER BEEF BREED. Grant County is Wisconsin headquarters; 800 head of registered Angus cattle. Let us supply you with a bull or some females. Write Walter J. Steinhoff, Secretary Grant County Aberdeen Angus Breeders' Assn., Platteville, Wis.

TOO LATE TO CLASSIFY.

FOR SALE

FIVE head of Shetland ponies: three mares in foal, two colts. Will sell one or more to a party, but prefer to sell entire herd to one man at once. Prices right.
CHET MILLER, JR. **R. 18, Evansville, Wis.**

ton asks for them. Write him if you need a Poland China boar. See page 21.—Adv.

Meinking Polands.

R. MEINKING, Bangor, Wis., is one of the "old timers" that has a big trade in Poland Chinas. We have no doubt but what he has sold as many pigs during the past three months as any breeder in the state. He has a trade worked up and sells to many men year after year. He sells them a good pig worth the money. A man could not be in one business 30 years and get by with it if he didn't give his customers value received. He breeds Polands—if you are interested in that breed write Meinking. See page 21.—Adv.

Short-horn Bulls for Sale.

IF you are in the market for a Short-horn bull, write W. J. Bernd & Sons, New Richmond, Wis. Just at this time they have several youngsters around a year old that are ready for immediate service. They are sired by Highland Sultan and Muchon Marshal, both International prize winners. The breeding is the best and the price is reasonable. Write or visit this good herd. Please mention The Wisconsin Farmer. See page 23.—Adv.

Babcock Has the Goods.

WE saw the boars that B. H. Babcock, Evansville, Wis., has for sale and we are glad to say that they are as good as any we have seen. If you want a good Chester White boar with good feet and a good back and well grown, do not be afraid to order from Babcock. They are good and if they are not as represented write this paper and we will see what the trouble is. The Babcock boars will please anyone. See page 22.—Adv.

Durocs at Delavan.

PHILLIPS BROS., Delavan, Wis., offer Duroc boars that come from a line of breeding that is most popular. They have a large assortment and if you place an order with them they feel that they can supply your wants to your satisfaction. Kindly write them and mention The Wisconsin Farmer. See page 22.—Adv.

Red Polls For You.

ARE you interested in Red Poll cattle? J. W. Salter & Son, Unity, Wis., will be glad to give you any information you wish to have relative to this good breed of cattle and if you wish to buy a good bull they have some for sale. Write them and please mention The Wisconsin Farmer. See page 23.—Adv.

Herrling's Duroc Trio.

MR. R. B. HERRLING, Glenbeulah, Wis., is offering two well-bred Duroc Jersey boars and one gilt for sale. Considering the individuality and breeding of these animals they should go quickly at the price at which Mr. Herrling is holding them. See advertisement on page 22.—Adv.

Walter George's Recent Purchase.

WALTER GEORGE, of Evansville, Wis., has just written us that he has purchased a $100 six months old boar at Guy Smith's sale that is an outstanding individual. We trust that this hog will develop into such an animal as will warrant Mr. George's present enthusiasm.—Adv.

Chief Defender.

DO you realize that Roy Church, Elkhorn, Wis., has one of the largest yearling Durocs in the state? His name is Chief Defender and he is sired by a son of Cherry Chief. Church offers boars that are sired by Chief Defender for sale at a reasonable price. See page 22.—Adv.

No Money in Advance.

F. H. BURT & SON, Brodhead, Wis., will sell you a Duroc boar on the "no money in advance" plan. They have a large number to select from

ANOKA FARMS' SHORT-HORN OFFERING
WAUKESHA, WIS., DECEMBER 1

THE sixteenth annual offering of Short-horn cattle will be made at Anoka Farms, Saturday, December 1st, and at that time there will be presented to the public one of the most remarkable lots of Short-horns ever sent forward by a breeder on either side of the water. Fifty head will be sold, 33 females and 17 bulls, and no animal in the list leaves anything to be desired from the standpoint of either breeding or individual excellence. The cattle in the sale are an Anoka production, representatives of the blood of the great prepotent sires used in this herd, bulls that have been such important factors in the advancement of the Short-horn. Handled and developed with the unerring judgment and master handicraft that have made the names of Harding and Anoka the symbol for all that is best in Short-horns, wherever they are known, and that is throughout the world, they are fit representatives of this great breed of cattle. The bull offering this year is headed by Anoka Champion, the Short-horn bull sensation of the year. He was champion in the Short-horn Futurity at Des Moines, where he was also first in the open class; first at Hamline, and first and grand champion at Milwaukee. Sired by Sultan Stamp, he is one of the greatest bull propositions ever offered at Anoka. Royal Stamp, by Crystal Stamp, belongs to the Crocus family, and is the Anoka type, as is also Rosebud Champion, a white youngster by Imp. Rusper Champion. Merry Stamp by Crystal Stamp, a white calf; Clipper Perfection, a red youngster by Imp. Rusper Champion; Anoka Proud Star by Collynie Mine; Nonpareil Crystal by Crystal Stamp, are all the desirable kind, level, smooth, thick, with strong heads and a world of quality. In the offering of young bulls will be found material to suit any breeder who may be looking for the best. Any individual mention of the female portion of the offering is out of the question. So much quality and value are seldom if ever seen in a like number of cattle and the writer doubts if there is another herd that could produce an equal number of heifers with anywhere near the real value of this remarkable lot. Daughters of Crystal Stamp, Missie Sultan, Imp. Rusper Champion, Anoka Stamp and other sires of equal merit, belonging to the most popular tribes known to the breed, they are cattle of the highest type and quality, bred and developed under the hands of an expert. Anoka is famed for the excellence of its cattle and new strength will be added to the reputation of this great breeding establishment by the lot of Short-horns it will offer on December 1st. Ten of the older heifers in the sale will have been served by sale day to either Lavender Sultan or Masterpiece. This sale may well be called the opening of the 1917 International. Coming as it does on Saturday, the first day of the great exposition, it is a fitting forerunner for this greatest of live stock events. The Anoka management has prepared a handsome photogravure showing every animal in the sale and a copy of this, together with the catalog, will be sent to all who will write for it to Anoka Farms, Waukesha, Wis., mentioning this paper. Colonels Jones and Reppert will sell the cattle and those who attend the sale can leave Waukesha so as to reach Chicago early Saturday evening and be in ample time to attend the International Show. (Signed) Fred V. Johnson, Wisconsin Farmer Representative.

Winchester Model 12 hammerless Shotgun, 20, 16 and 12 gauges

Why the 20 Gauge is Gaining in Popularity

Back in the '90s the 10 gauge was the weapon that had the call among American sportsmen.

But as the game became scarcer, there came a better sense of sportsmanship. The 10 gauge yielded to the 12 gauge.

Today, hunters who are in it for "Sport's Sake" are taking to the light 20 and 16 gauges—the true sportman's guns.

When you carry a 20 gauge, you're *playing the game* and you *earn* every bird you bring down.

Quicker action and better pattern with the 20 gauge

In the hands of a good shot, the 20 gauge has proved almost as effective a field gun as the 12 gauge. This is because in the first place, being lighter, it permits of quicker handling; you get onto your game faster.

Then, too, if you're quick, most of your shots at quail, snipe and prairie chicken will be at from 15 to 25 yards; at these distances the properly bored 20 gauge makes its best pattern, while the 12 gauge does not open up so as to give the shooter the full benefit of its larger load of shot until close to 40 yards.

The 20 gauge then can give you as good a bag as a 12 gauge if you handle it fast and get onto your game quickly. It's a sportier gun to work with.

A gun that few sportsmen can resist

The nicely balanced Model 12, Winchester 20 gauge with its slim, graceful barrel is a beautiful weapon and has a fascination about it few sportsmen can resist.

Quick feeder, sure ejector. Throws empty shell to the side out of your way.

Dense, even, hard hitting, quick opening pattern of the Winchester 20 gauge.

It works smoothly in whatever position it is held.

A man who has used this Model 12, 20 gauge Winchester; or its duplicate in the Model 97, 16 gauge—for those whose prefer a hammer action gun—for a few days of shooting, finds it hard to go back to his heavier 12 gauge.

The barrel *is* the gun

Men who know guns realize that the accuracy and durability of a gun lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard of quality of the barrels on the highest or lowest priced Winchester guns. With Winchester the barrel *is* the gun and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel.

The Winchester barrel

The barrels of the Winchester Models 12 and 97 have been scientifically bored to micrometer measurements for the pattern they are meant to make. The degree of choke exactly offsets the tendency of the shot to spread. Until the pattern proves up to Winchester standard, the guns cannot leave the factory.

The Nickel Steel construction preserves the original accuracy forever. The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that, with proper care, will last a lifetime.

What (P/W) means

This mark on the barrel means *Viewed and Proved Winchester.* This stamp stands for Winchester's guarantee of quality, with fifty years of the best gun-making reputation behind it.

Every gun that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times for smooth action and accuracy, and with excess loads for strength. At every stage of Winchester manufacture machine production is supplemented by human craftsmanship. It is a *test and adjustment process.*

It is this care in manufacturing that has produced in these two light gauge models, guns that have won the admiration of all true sportsmen who follow *Sport for Sport's Sake.*

Write for details of Winchester shotguns, rifles and ammunition

The Winchester catalog is an encyclopedia on shotguns, rifles and ammunition. Every hunter should have one. It gives detailed specifications of the Model 12 and describes at length the principles on which every one of the world-famous Winchester rifles and shotguns is built. Write today. We will mail you a copy free, postpaid.

VOL. XLVI. NO. 47. THURSDAY, NOVEMBER 22, 1917. WHOLE NO. 1869

Wisconsin Baby Beef Round-Up.

In the Ring at Baby Beef Show at Madison Last Week.

THE second annual baby beef contest under the direction of the Wisconsin Live Stock Breeders' Association, was held at the college live stock pavilion at Madison, November 14th and 15th. It was an excellent show. Improved in quality and quantity of entries by several hundred per cent over last year, it is deserving of all the praise that has been given it by breeders and visitors who attended the round-up. There were two classes this year with a total of forty-three entries. Senior and grand championship honors were carried off by Walter Hartman, of Lodi, whose Angus steer was, in the opinion of Judge J. G. Imboden, of Decatur, Illinois, the best-balanced all-around butcher type animal of the show. The junior championship was won by Ted Scott, of Bagley, on a Hereford steer, a well-fleshed, deep individual, carrying a large amount of high-priced meat, fine in bone and of good quality in every respect. The senior class had twenty-eight entries. It took the judge a long time to place each animal to his own satisfaction, but when the line-up was finally completed he started with the winner and proceeded right down the line, explaining in detail every one of the placings. The highest three animals in the senior class were an Angus and two Short-horn steers. The Short-horns were shown by Josephine Herr, of Lodi, and Alvin Morley, of Baraboo. There was considerable discussion on the side line regarding the placing of the first three animals, but Judge Imboden explained his stand in favor of the Angus to the satisfaction of all. The Short-horn steer fed by Miss Herr was without doubt the most highly fitted animal in the ring. However, the Angus would, in the opinion of the judge, dress out with less waste, because he carried more lean meat in the regions where the meat is high priced. There was just a bit of paunchiness about the Herr Short-horn steer, though he was without doubt unexcelled in the depth and width of body.
